Subject: Tell Duke No Nuke! We Want Low-Cost Efficiency and Renewables!

Sep 10, 2010

Public Utilities Commission

Docket # 10-503

Ohio utilities rely too heavily on dirty and expensive fossil fuels. Ohio's new law that requires utilities to invest in efficiency and renewables is a step in the right direction - creating jobs, protecting public health, and cleaning our air. But Duke wants to be let off the hook for its efficiency responsibilities and has proposed to build an expensive new nuclear plant instead. Please hold Duke accountable! Ohioans want efficiency and renewables - not a new nuclear plant!

Many market potential studies have proven that it's cost effective for Duke to go well beyond its efficiency requirements, and many renewable technologies are far cheaper than building a nuclear plant. Efficiency and renewables are the most cost effective ways of shielding consumers from high energy costs and protecting the environment.

If Duke is let off the hook for its energy efficiency requirements, every utility in the state may try to follow suit. Please protect all customers and the environment through strong enforcement of SB221.

Sincerely

Ms. Ginnie Vogts

But Duke wants to be let off the hook for its efficiency responsibilities and has proposed to build an expensive new nuclear plant instead. Please hold Duke accountable! Ohioans want efficiency and renewables - not a new nuclear plant!

I want my Ohio to be energy efficient, and to concentrate on renewable sources of energy.

Efficiency and renewables are the most cost effective ways of shielding consumers from high energy costs and protecting the environment.

There are a number of market potential studies that have shown it's cost effective for Duke to go well beyond its efficiency requirements.

There are many renewable technologies that are far cheaper than building a nuclear plant.

Our family has seen first hand the tragedy played out at Piketon, Ohio. Never again! Clean up Piketon before there is any discussion of possible nuclear activities in Ohio.

If Duke is let off the hook for its energy efficiency requirements, every utility in the state may try to follow suit. Please protect all customers and the environment through strong enforcement of SB221.

Many market potential studies have proven that it's cost effective for Duke to go well beyond its efficiency requirements, and many renewable technologies are far cheaper than building a nuclear plant. Efficiency and renewables are the most cost effective ways of shielding consumers from high energy costs and protecting the environment.

Nuclear power is the most expensive form of energy and building a plant in Ohio will not begin fill consumer needs for years. It is a polluting industry not only in radioactive waste - a problem that has not yet been resolved - and the need for fossil fuels to produce nuclear energy.

Take care of Ohio's environment. Let's promote safe, clean renewables.

Thank you!

If Duke is let off the hook for its energy efficiency requirements, every utility in the state may try to follow suit. Please protect all customers and the environment through strong enforcement of SB221.

But Duke wants to be let off the hook for its efficiency responsibilities and has proposed to build an expensive new nuclear plant instead. Please hold Duke accountable! Ohioans want efficiency and renewables - not a new nuclear plant!

Efficiency and renewables are less costly than building a nuclear plant, and are also flexible. Once a plant is started, that is what we are going to get, whereas efficiency and renewables can be tailored to immediate needs.

Centralized nuclear power has issues of transmission and loss of power over long distances, so more generation is needed.

If we add in the cost of decommissioning nuclear power plants, finding a solution to storing wastes for thousands of years, and paying health care to radioactively-exposed workers, nuclear becomes prohibitively expensive. These costs are not being currently calculated by Duke Energy.

If Duke is let off the hook for its energy efficiency requirements, every utility in the state may try to follow suit. Please protect all customers and the environment through strong enforcement of SB221.

Docket # 10-503

Ohio utilities rely too heavily on dirty and expensive fossil fuels. Ohio's new law that requires utilities to invest in efficiency and renewables is a step in the right direction - creating jobs, protecting public health, and cleaning our air. But Duke wants to be let off the hook for its efficiency responsibilities and has proposed to build an expensive new nuclear plant instead. Please hold Duke accountable! Ohioans want efficiency and renewables - not a new nuclear plant!

Many market potential studies have proven that it's cost effective for Duke to go well beyond its efficiency requirements, and many renewable technologies are far cheaper than building a nuclear plant. Efficiency and renewables are the most cost effective ways of shielding consumers from high energy costs and protecting the environment.

If Duke is let off the hook for its energy efficiency requirements, every utility in the state may try to follow suit. Please protect all customers and the environment through strong enforcement of SB221.

Sincerely

Dr. Craig Roberts
2666 Summit St
Columbus, OH 43202-2435

Public Utilities Commission

Docket # 10-503

Ohio utilities rely too heavily on dirty and expensive fossil fuels. Ohio's new law that requires utilities to invest in efficiency and renewables is a step in the right direction - creating jobs, protecting public health, and cleaning our air. But Duke wants to be let off the hook for its efficiency responsibilities and has proposed to build an expensive new nuclear plant instead. Please hold Duke accountable! Ohioans want efficiency and renewables - not a new nuclear plant!

Nuclear power plants are incredibly expensive to build and maintain. And uranium is extremely wasteful and toxic to mine. Concentration of uranium in the ore is usually .0012 or less, meaning a ton of rock is processed to produce 2 pounds of uranium. All the rest of it is left behind as mine tailings. But these tailings are also radioactive and they are left behind as a powder which readily gets into air and water. In the meantime the extracted uranium then goes through considerable processing to make it usable. This is a leaching process, which uses and contaminates vast amounts of water. Then later the spent but still radioactive fuel rods have to be safely maintained for tens of thousands of years, which we have not yet figured out how to do.

Wind, solar, and geothermal energy are cheaper, easier, and safer. Please do not allow Duke to build nuclear plants but require them to actually invest in clean renewable power and conservation.

If Duke is let off the hook for its energy efficiency requirements, every utility in the state may try to follow suit. Please protect all customers and the environment through strong enforcement of SB221.

Sincerely

Dr. Kate Anthony

But Duke wants to be let off the hook for its efficiency responsibilities and has proposed to build an expensive new nuclear plant instead. Please hold Duke accountable! Ohioans want efficiency and renewables - not a new nuclear plant!

My hope is that you will see the wisdom in investing in renewable power and not investing in nuclear power. I am not confident that nuclear power is safe and I would not like to live near a nuclear power plant - who would? Please reconsider your decision.

Many market potential studies have proven that it's cost effective for Duke to go well beyond its efficiency requirements, and many renewable technologies are far cheaper than building a nuclear plant. Efficiency and renewables are the most cost effective ways of shielding consumers from high energy costs and protecting the environment.

Please protect my electricity rates and Ohio's future!

Duke Energy is proposing to build an expensive nuclear power facility; yet the company fails to properly estimate the amount of low-cost energy efficiency in Ohio.

Unless and until Duke Energy seriously achieves all economically available energy efficiency and renewable energy, a new, expensive nuclear facility should be completely off limits.

Energy efficiency costs on average 3 cents per kwh; while nuclear energy will cost upwards of 15 cents per kwh; we can't afford to leave any low cost energy efficiency on the table, unutilized.

Please ensure that Duke Energy properly estimates, examines, and captures all the cost effective energy efficiency options available before looking to expensive, new alternatives generation.

I look forward to your reply.
