Public Utilities Commission

Docket # 10-503

Ohio utilities rely too heavily on dirty and expensive fossil fuels. Ohio's new law that requires utilities to invest in efficiency and renewables is a step in the right direction - creating jobs, protecting public health, and cleaning our air. But Duke wants to be let off the hook for its efficiency responsibilities and has proposed to build an expensive new nuclear plant instead. Please hold Duke accountable! Ohioans want efficiency and renewables - not a new nuclear plant!

Many market potential studies have proven that it's cost effective for Duke to go well beyond its efficiency requirements, and many renewable technologies are far cheaper than building a nuclear plant. Efficiency and renewables are the most cost effective ways of shielding consumers from high energy costs and protecting the environment.

If Duke is let off the hook for its energy efficiency requirements, every utility in the state may try to follow suit. Please protect all customers and the environment through strong enforcement of SB221.

Sincerely

Mr. Greg Zyzanski  
1187 Brainard Rd  
Lyndhurst, OH 44124-1454

Many market potential studies have proven that it's cost effective for Duke to go well beyond its efficiency requirements, and many renewable technologies are far cheaper than building a nuclear plant. Efficiency and renewables are the most cost effective ways of shielding consumers from high energy costs and protecting the environment.

Nuclear energy is not clean. Study the legacy of uranium mining to see why nuclear energy is just another dirty energy and nobody to my knowledge have solved the problem of nuclear waste. However, I could support a nuclear program as outlined in the March 2010 issue of National Geographic titled "Small Town Nukes". Let think out of the box when it comes to nuclear energy.

Our prayers are with you on this issue.

If Duke is let off the hook for its energy efficiency requirements, every utility in the state may try to follow suit. Please protect all customers and the environment through strong enforcement of SB221.

Sincerely

Mrs. Kathleen and Paul Helbling

But Duke wants to be let off the hook for its efficiency responsibilities and has proposed to build an expensive new nuclear plant instead. Please hold Duke accountable! Ohioans want efficiency and renewables - not a new nuclear plant!

We are paying a dear cost now (as are our children and grandchildren) for a government paradigm that fails to plan for the future in a holistic and healthy manner. Instead we allow corporations to choose the profitable way without regard for the future or the health of our citizens and our earth. This has got to change!

Renewable technologies are far cheaper than nuclear solutions. Conservation and efficiency are also far more cost effective, and Duke has under-utilized these approaches.

Say "NO NUKES" to the Dukes of the world!

If Duke is let off the hook for its energy efficiency requirements, every utility in the state may try to follow suit. Please protect all customers and the environment through strong enforcement of SB221.

Efficiency and renewables are the most cost effective ways of shielding consumers from high energy costs and protecting the environment.

Do you have short-term memory loss? I visited the Moscow Plant in Ohio when it was being converted from nuclear to coal back in the 1970s or 80s. People, once they know the truth about nuclear, don't want nuclear. Study your history. I taught energy education for 30 years in public schools as part of my science classes. I even still have the vinyl "No Nukes" album. People have not forgotten and people will be reminded again. NO NUKE!

If Duke is let off the hook for its energy efficiency requirements, every utility in the state may try to follow suit. Please protect all customers and the environment through strong enforcement of SB221.

But Duke wants to be let off the hook for its efficiency responsibilities and has proposed to build an expensive new nuclear plant instead. Please hold Duke accountable! Ohioans want efficiency and renewables - not a new nuclear plant!

You are well aware that efficiency and renewables are the most cost effective ways of shielding consumers from high energy costs and protecting the environment.

It seems that it would be in your best interests, both financially and publicly, to consider both the more immediate and the long-term effects in your decisions.

I also think it's best to remind customers how to conserve energy. This was considered to be patriotic and politically-correct during the Carter Administration. Hopefully, we can recover some of the lost ground since the early environmentally-conscious (and internationally-prudent) ways of the 70s.

If Duke is let off the hook for its energy efficiency requirements, every utility in the state may try to follow suit. Please protect all customers and the environment through strong enforcement of SB221.

Docket # 10-503

Ohio utilities rely too heavily on dirty and expensive fossil fuels. Ohio's new law that requires utilities to invest in efficiency and renewables is a step in the right direction - creating jobs, protecting public health, and cleaning our air. But Duke wants to be let off the hook for its efficiency responsibilities and has proposed to build an expensive new nuclear plant instead. Please hold Duke accountable! Ohioans want efficiency and renewables - not a new nuclear plant!

Many market potential studies have proven that it's cost effective for Duke to go well beyond its efficiency requirements, and many renewable technologies are far cheaper than building a nuclear plant. Efficiency and renewables are the most cost effective ways of shielding consumers from high energy costs and protecting the environment.

If Duke is let off the hook for its energy efficiency requirements, every utility in the state may try to follow suit. Please protect all customers and the environment through strong enforcement of SB221.

Sincerely

Mr. Brian & Natalie Reitz

Columbus, OH 43220

CASE ID: KARN090710EU

Dear Ms. Arnold:

Thank you for contacting the Public Utilities Commission of Ohio (PUCO) regarding Duke Energy Ohio's long term forecast report filing.

On June 15, 2010, Duke filed its long term forecast report with the PUCO in case number 10-503-EL-FOR. Ohio law requires Duke to submit this report to the PUCO to provide a projection of the company's future demand for electricity and its plan to meet that demand. The plan must also include energy efficiency initiatives that will help the company conserve energy along with information on any potential alternative energy development by the company or any plans the company has to develop new generating facilities during the forecast period.

The PUCO has scheduled an evidentiary hearing on Duke's long term forecast report for Nov. 8, 2010 at 10 a.m. at the PUCO offices in Columbus. The Commission will consider all evidence presented before issuing a decision on Duke's long term forecast report.

Should you have questions on any other utility issue, please contact the PUCO Call Center at (800) 686-PUCO (7826) or visit our Web site at [www.PUCO.ohio.gov](http://www.PUCO.ohio.gov).

Sincerely,

Kelly Ryan
