Subject: Tell Duke No Nuke! We Want Low-Cost Efficiency and Renewables!

Sep 23, 2010

Public Utilities Commission

Docket # 10-503

Ohio utilities rely too heavily on dirty and expensive fossil fuels. Ohio's new law that requires utilities to invest in efficiency and renewables is a step in the right direction - creating jobs, protecting public health, and cleaning our air. But Duke wants to be let off the hook for its efficiency responsibilities and has proposed to build an expensive new nuclear plant instead. Please hold Duke accountable! Ohioans want efficiency and renewables - not a new nuclear plant!

Many market potential studies have proven that it's cost effective for Duke to go well beyond its efficiency requirements, and many renewable technologies are far cheaper than building a nuclear plant. Efficiency and renewables are the most cost effective ways of shielding consumers from high energy costs and protecting the environment. Please listen to us and do what is right. Don't set this precedent for other to get out of doing what is right!

If Duke is let off the hook for its energy efficiency requirements, every utility in the state may try to follow suit. Please protect all customers and the environment through strong enforcement of SB221.

Sincerely

Efficiency and renewables are the most cost effective ways of shielding consumers from high energy costs and protecting the environment.

Come on folks, its time to wake-up, we know that another nuke plant is not the right answer. We know that breaking the dependency upon fossil fuels is the right answer. This is the area we need to concentrate on. If we focus on this issue, we can catch-up to the rest of the world and perhaps become the world leaders in this area. Oh Boy now, I like that idea, how 'bout you ?

If Duke is let off the hook for its energy efficiency requirements, every utility in the state may try to follow suit. Please protect all customers and the environment through strong enforcement of SB221.

Public Utilities Commission

Docket # 10-503

Ohio utilities rely too heavily on dirty and expensive fossil fuels. Ohio's new law that requires utilities to invest in efficiency and renewables is a step in the right direction - creating jobs, protecting public health, and cleaning our air. But Duke wants to be let off the hook for its efficiency responsibilities and has proposed to build an expensive new nuclear plant instead. Please hold Duke accountable! Ohioans want efficiency and renewables - not a new nuclear plant!

Many market potential studies have proven that it's cost effective for Duke to go well beyond its efficiency requirements, and many renewable technologies are far cheaper than building a nuclear plant. Efficiency and renewables are the most cost effective ways of shielding consumers from high energy costs and protecting the environment.

If Duke is let off the hook for its energy efficiency requirements, every utility in the state may try to follow suit. Please protect all customers and the environment through strong enforcement of SB221.

Sincerely

Ms. Patsy Deerhake

Please hold Duke responsible. Too many corporations are let off the hook because they give large dollars to political interests. I beg of you to morally choose what is right rather than what will help someone's pocketbook, namely some politician. When will Ohio stand up for clean energy and even lead the way in creating clean energy?

If Duke is let off the hook for its energy efficiency requirements, every utility in the state may try to follow suit. Please protect all customers and the environment through strong enforcement of SB221.

How about doing the right thing and going with clean and renewable energy resources? Oh wait, I almost forgot...energy industries are in business to rape the earth and reap the profit. I don't know why I thought that big energy actually cared about the planet and human well-being? Silly me.

If Duke is let off the hook for its energy efficiency requirements, every utility in the state may try to follow suit. Please protect all customers and the environment through strong enforcement of SB221.

Public Utilities Commission

Docket # 10-503

Ohio utilities rely too heavily on dirty and expensive fossil fuels. Ohio's new law that requires utilities to invest in efficiency and renewables is a step in the right direction - creating jobs, protecting public health, and cleaning our air. But Duke wants to be let off the hook for its efficiency responsibilities and has proposed to build an expensive new nuclear plant instead. Please hold Duke accountable! Ohioans want efficiency and renewables - not a new nuclear plant!

Many market potential studies have proven that it's cost effective for Duke to go well beyond its efficiency requirements, and many renewable technologies are far cheaper than building a nuclear plant. Efficiency and renewables are the most cost effective ways of shielding consumers from high energy costs and protecting the environment.

As a consumer is very much aware of energy efficiency in my own home, I also know that many of my neighbors are not. There is vast potential for investing in "negawatt" production that is far, far more cost effective than construction of any type of power plant. (http://en.wikipedia.org/wiki/Negawatt_power) Yes, it takes alot of renewable energy projects to even start to come close to the generating potential of a nuclear plant, but that is precisely why conservation measures are so important.

Quite frankly, as a (albeit small) businessperson myself I just don't understand why Duke or other power companies would want to take on the massive expense and risk of a nuclear power plant. Not only is a nuclear plant incredibly expensive and time-intensive to build, but there are major security issues as well as the issue of nuclear waste storage. On the other hand, negawatt production is far less expensive and can have much more timely results. Renewable energy sources can also be put in operation more quickly with far less security and environmental issues. I just don't understand why companies that wants to be around in the long-term isn't truly thinking in the long-term. The writing is on the wall - renewable energy will be the energy of the future - so why not be a willing leader in that rather than being forced into it later? And besides just the business/financial aspects of the issue, why would you want to allow something like nuclear energy that has the potential to harm so very many people if something goes wrong? I want to help - or at the very least, not harm - my fellow human beings, and I simply don't understand why power companies and regulators wish to conduct themselves in ways that could be so very harmful and hurtful to the citizens of this country. Money and profits are not the only measures of successfulness.

Yes, I know you'll say you are looking to the future - the future

beyond oil - when considering the use of nuclear power. But you haven't lived in the West like I have, to have more up close experience with the issues surrounding nuclear power. Living in Utah and Colorado for a many years, I have been very much aware of the issues of uranium mining waste and the problems associated with its safe disposal. There are issues of the long-term health affects on uranium miners and those in the processing industry. There are major issues associated with the clean-up of former nuclear processing sites, and then of course there is the truly gigantic issue of how and where to safely store nuclear waste. As someone who has lived in various locations in the United States, we need to remember that Ohio's decision on this issue can have impacts on other portions of the country. We wouldn't want Utah or Nevada to take action that creates greater health hazards for residents here in Ohio, so we need to make sure we don't create further dangers for citizens in other parts of the country.

If Duke is let off the hook for its energy efficiency requirements, every utility in the state may try to follow suit. Please protect all customers and the environment through strong enforcement of SB221.
