PUCO

In the Matter of the Commission Review of )  
the Capacity Charges of Ohio Power ) Case No. 10-2929-EL-UNC  
Company and Columbus Southern Power )  
Company. )

OHIO POWER COMPANY'S AND  
COLUMBUS SOUTHERN POWER COMPANY'S  
APPLICATION FOR REHEARING

On December 8, 2010, the Commission issued an Entry initiating this proceeding. In its Entry the Commission makes statements regarding and seeks information from interested parties concerning the application filed on November 24, 2010, on behalf of Ohio Power Company (OPCo) and Columbus Southern Power Company (CSP) (collectively referred to as "AEP Ohio" or "the Companies") with the Federal Energy Regulatory Commission (FERC) in FERC Docket No. ER11-2183-000.

The Companies' FERC application seeks approval from the FERC to make changes to the wholesale charges that they assess for supplying capacity associated with retail loads served by alternative load-serving entities (also referred to in Ohio as competitive retail electric service (CRES) providers). Under the Fixed Resource Requirement (FRR) provisions in the PJM Interconnection, L.L.C. (PJM) Reliability Assurance Agreement (RAA), the amounts that the Companies currently recover from CRES providers in connection with their sales to retail customers that switch away from the Companies are set by PJM's Reliability Pricing Model (RPM) capacity auction prices. Those prices are not based upon, and would not permit the Companies to fully recover, their capacity costs. Accordingly, consistent with express provisions in the RAA and their rights established by the Federal Power Act (FPA), the

document delivered in the regular course of business.  
Technician AND Date Processed 1/10/11

Companies requested approval for an alternative mechanism that would more accurately calculate and recover their capacity costs.

In its December 8 Entry, at Finding 4, the Commission first asserts that in *In re Columbus Southern Power Company*, Case No. 08-917-EL-SSO, and *In re Ohio Power Company*, Case No. 08-918-EL-SSO (*ESP Cases*), it approved retail rates, "including recovery of capacity costs through provider-of-last-resort (POLR) charges to certain retail shopping customers, based upon the continuation of the current capacity charges established by the three-year capacity auction conducted by PJM, Inc., under the current fixed resource requirement (FRR) mechanism."

Next, also in Finding 4 of its December 8 Entry, the Commission concludes that, as a result of the Companies' application to the FERC, "the Commission will now expressly adopt as the state mechanism for the Companies the current capacity charges established by the three-year capacity auction conducted by PJM, Inc. during the pendency of this review."

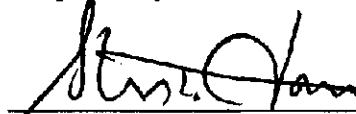

The Commission further finds, at Finding 5 of its December 8 Entry, that a review is necessary in order to determine the impact of the proposed change to AEP Ohio's FERC-regulated wholesale capacity charges. As a result, the Commission's Entry seeks comment regarding "(1) what changes to the current state mechanism are appropriate to determine the Companies' FRR capacity charges to Ohio competitive retail electric service (CRES) providers; (2) the degree to which AEP-Ohio's capacity charges are currently being recovered through retail rates approved by the Commission or other capacity charges; and (3) the impact of AEP-Ohio's capacity charges upon CRES providers and retail competition in Ohio."

Pursuant to §4903.10, Ohio Rev. Code, and §4901-1-35(A), Ohio Admin. Code, the Companies respectfully apply for rehearing of the Commission's December 8, 2010, Entry. The Entry is unreasonable and unlawful in the following respects:

- I. The Commission's Entry is unlawful and unreasonable in finding that the POLR charges approved in Case Nos. 08-917-EL-SSO and 08-918-EL-SSO cover the Companies' costs of supplying capacity for retail loads served by CRES providers; the Commission also erred in finding that the approved POLR charges were based upon the continued use of RPM auction prices to set capacity charges for CRES providers.
  - A. The Provider of Last Resort Obligation under Ohio law
  - B. The approved POLR charge and the wholesale RAA capacity charge are related to separate services that are based on distinct costs.
  - C. CSP's and OPC's POLR charges approved in the *ESP Cases* simply do not reflect the capacity costs recovered under the FRR charges.
  - D. The Commission's decision in the *Ormet Case* and the *Eramet Case* also directly undercut the Entry's present finding that the approved POLR charges already reflect the capacity cost associated with shopping customers.
- II. The Commission's Entry establishing an interim wholesale capacity rate is unreasonable and unlawful because the Commission is a creature of statute and lacks jurisdiction under both Federal and Ohio law to issue an order affecting wholesale rates regulated by the Federal Energy Regulatory Commission.
- III. The Entry was issued in a manner that denied AEP Ohio due process and violated statutes within Title 49 of the Revised Code, including Sections 4903.09, 4905.26, and 4909.16, Revised Code.
- IV. Finding 4 of the Entry and subpart 1 of Finding 5 must be reversed and vacated because they are in direct conflict with, and preempted by, federal law.

A memorandum in support of this application for rehearing is attached.

Respectfully submitted,

---

and Ohio Power Company

## **MEMORANDUM IN SUPPORT**

In FERC Docket No. ER11-2183-000, CSP and OPCo have applied for authority to revise the amounts that they charge for supplying capacity associated with retail loads served by alternative load-serving entities (referred to in Ohio as competitive retail electric service (CRES) providers).<sup>1</sup> Under the Fixed Resource Requirement (FRR) provisions in the PJM Interconnection, L.L.C. (PJM) Reliability Assurance Agreement (RAA), the amounts that CSP and OPCo currently recover from the CRES providers in connection with CRES providers' sales to retail customers that switched away from CSP/OPCo are set by PJM's Reliability Pricing Model (RPM) capacity auction prices. Those prices will not permit the Companies to fully recover their costs. Consequently, consistent with the express provisions of the RAA and rights established by the Federal Power Act, the Companies submitted an alternative mechanism to more accurately calculate and recover their costs of supplying capacity for retail loads served by CRES providers.

Through their application to FERC, the Companies sought to revise the compensation they receive for meeting their FRR capacity obligations in accordance with Section D.8 of Schedule 8.1 of the RAA.<sup>2</sup> That provision expressly provides that the Companies may, "at any time, make a filing with FERC under Section 205 of the Federal Power Act proposing to change the basis for compensation to a method based on [their] cost or such other basis shown to be just and reasonable." While it is true that Section D.8 also references the option of a "state compensation mechanism" and suggests that a state mechanism may "prevail" in lieu of a

---

<sup>1</sup> American Electric Service Corporation initially filed on November 1, 2010, an application with FERC in FERC Docket No. ER11-1995, on behalf of the Companies. Pursuant to a Deficiency Letter issued on November 19, 2010, the Companies' revised application was refiled with FERC in FERC Docket No. ER11-2183-000 on November 24, 2010.

<sup>2</sup> PJM Rate Schedule FERC No. 44 at 113, Section D.8 of Schedule 8.1 of the RAA ("Section D.8").

federally-approved alternative, that reference does not justify the Commission's action in this instance and is inapplicable here for several reasons.

First, Congress has mandated that the FERC exercise plenary authority over the regulation of wholesale electric transactions involving the sale of capacity as well as the sale of energy. Thus, the state compensation mechanism referenced in Section D.8 cannot be invoked to usurp the Companies' right under Section 205 of the FPA to petition FERC to change the basis for compensating them for capacity charges to CRES providers. Nor can it be used to justify a state proceeding that seeks to undermine and derail a pending FERC proceeding commenced under the last proviso in Section D.8. Yet that apparently is what the Commission is doing here, as evidenced by its comments in the pending FERC proceeding.<sup>3</sup>

Second, even if a state regulatory entity could exercise authority to establish the capacity charges to be paid to the FRR Entity by CRES providers, this Commission has no authority to do so under Ohio law.

Third, even if were permissible for it do so as a matter of both federal and state law (which it is not), this Commission has not adopted a state compensation mechanism within the purview of Section D.8 because it has never issued an order that requires CRES providers to compensate the Companies for their FRR capacity obligations. It certainly did not do so in the *ESP Cases* when it approved provider-of-last resort ("POLR") charges to certain retail customers and it did not do so in the December 8 Entry. The POLR charges relate to an entirely different service and are based on an entirely different set of costs than the capacity charges provided for in Sch. 8.1, Sec. D.8 of the RAA. During the entire period in which the current retail POLR charges have been in effect, the Companies have been collecting the PUCO-approved POLR

---

<sup>3</sup> The Commission's December 10, 2010 Comments in Docket No. ER11-2183-000 state that there is no need for the FERC proceeding to advance because the Commission has provided a state compensation mechanism. Comments at 2 and n.1 (attached hereto as Attachment A).

charge from certain retail customers and the separate FERC-approved FRR capacity charge from CRES Providers. Heretofore, no one – not the Commission, not the CRES Providers and not the retail customers nor their advocates – has suggested that the POLR charge or any other PUCO-approved retail charge compensates the Companies for their capacity obligations under the RAA and is, in whole or in part, the state compensation mechanism referenced in Sch. 8.1, Sec. D.8. While the Entry in this proceeding purports to adopt an interim "state compensation mechanism," it does not do so effectively because it does not require switching customers or CRES providers to pay any additional amounts to the Companies to compensate them for the FRR capacity obligations.

Fourth, even if the prior ESP Orders or the December 8, 2010 Entry could be read to have established a state compensation mechanism for capacity charges to be paid by switching retail customers or CRES providers, the Commission's action would be invalid because the Commission failed to provide the Companies any semblance of due process by summarily purporting to establish a rate to be paid by CRES providers without any record basis to do so or any opportunity for the Companies to be heard on this issue.

Each of these reasons, which singly and collectively establish the grounds for rehearing, is discussed more fully below. Any one of these reasons requires the Commission to vacate its findings in paragraph 4 of the Entry.

The Commission erroneously asserts in Finding 4 of its Entry that in the *ESP Cases*, it approved retail rates, "including recovery of capacity costs through provider-of-last-resort (POLR) charges to certain retail shopping customers, based upon the continuation of the current capacity charges established by the three-year capacity auction conducted by PJM, Inc., under the current fixed resource requirement (FRR) mechanism." Also in Finding 4 of its December 8

Entry, the Commission unlawfully states that, as a result of the Companies' application to the FERC, "the Commission will now expressly adopt as the state mechanism for the Companies the current capacity charges established by the three-year capacity auction conducted by PJM, Inc. during the pendency of this review."

Each of these reasons also requires the Commission to vacate its finding in subsection 1 of paragraph 5 of the Entry. In subsection 1 of Finding 5, the Commission seeks comment regarding "what changes to the current state mechanism are appropriate to determine the Companies' FRR capacity charges to Ohio [CRES providers]." This finding is erroneously premised on the existence of a "current state mechanism," although no such mechanism is in place. It also would be unlawful as a matter of both federal and state law for the Commission to now adopt any mechanism to determine the Companies' FRR capacity charges.

The Commission further finds, at Finding 5 of its December 8 Entry, that a review is necessary in order to determine the impact of the proposed change to AEP Ohio's FERC-regulated wholesale capacity charges. As a result, the Commission's Entry seeks comment regarding ". . . (2) the degree to which AEP-Ohio's capacity charges are currently being recovered through retail rates approved by the Commission or other capacity charges; and (3) the impact of AEP-Ohio's capacity charges upon CRES providers and retail competition in Ohio."

While these subparts of Finding 5 of the Entry also appear to be designed to support taking further action in this proceeding regarding the Companies' wholesale capacity charges that are beyond this Commission's jurisdiction, AEP Ohio recognizes that the Commission has broad authority to investigate matters involving Ohio utilities and that it may explore such matters even as an adjunct to its own participation in FERC proceedings such as FERC Docket ER11-2183-000. Therefore, while the Companies disagree that there is any need for an

investigation or PUCO proceeding regarding this matter, AEP Ohio plans to participate in the investigation component of this proceeding and its current application for rehearing is focused on the interim rate that the Commission purported to establish in Finding 4 of the Entry and on subpart 1 of Finding 5 that appears to be aimed at further modifying the wholesale capacity charge.

**I. The Commission's Entry is unlawful and unreasonable in finding that the POLR charges approved in Case Nos. 08-917-EL-SSO and 08-918-EL-SSO cover the Companies' costs of supplying capacity for retail loads served by CRES providers; the Commission also erred in finding that the approved POLR charges were based upon the continued use of RPM auction prices to set capacity charges for CRES providers.**

The Commission's claim in its December 8 Entry that the POLR charges it approved for the Companies in the *ESP Cases* were intended to recover their costs of supplying capacity for retail loads served by CRES providers is without basis. That notion reflects a misunderstanding of the basis for the retail POLR rates approved for CSP's and OPC's retail customers. The POLR charges relate to an entirely different service and are based on an entirely different set of costs than the capacity rates provided for under Section D.8 of Schedule 8.1 of the RAA. As the record in the *ESP Cases* confirms, the POLR rates are not the "state compensation mechanism" envisioned under the RAA and there is no overlap (and thus no double recovery) between the Ohio retail POLR charges and the FRR compensation provided for under the RAA. Simply put, the PUCO's approval of retail POLR charges do not compensate CSP and OPC for the wholesale capacity that they are required to make available as FRR Entities under the RAA.

**A. The Provider of Last Resort Obligation under Ohio law**

Am. Sub. S.B. No. 3, 1999 Ohio SB 3, effective October 5, 1999 (SB 3) which was subsequently modified by S.B. 221, restructured regulation of electric utilities by introducing retail customer choice for electric generation service and providing for future deregulation of generation service

in Ohio. Of importance to this proceeding, SB 3 granted retail customers the right to not shop and avoid market-based rates by taking the standard service offer (“SSO”) of their electric distribution utility (*i.e.*, CSP and OPC). *See* Ohio Rev. Code Ann. § 4928.141 (2010). A unique aspect of Ohio’s restructuring laws is that retail customers that do shop for alternative generation service may return to the utility’s SSO if they subsequently decide to return or if their CRES provider turns the customer back or defaults on its obligation to serve. Ohio Rev. Code Ann. § 4928.14 (2010).

A corollary to these customer rights is the electric distribution utility’s obligation to be the provider of last resort, a requirement imposed on electric distribution utilities by multiple statutory provisions.<sup>4</sup> When coupled with the right to choose a retail generation supplier, availability of the SSO means that a retail customer may freely leave the electric distribution utility when the market price is lower than the stabilized SSO rate and may just as easily return when the market price rises above the SSO rate. Given the volatile nature of market prices for electricity, there exists an opportunity for “churn” or migration of customers on and off SSO service. Another POLR obligation provides that customers of a defaulting competitive provider may return to the electric distribution utility’s SSO until the customers choose an alternative supplier.<sup>5</sup> Thus, Ohio electric distribution utilities must stand ready to provide full generation services as necessary to fulfill their statutory POLR obligation.

---

<sup>4</sup> R.C. § 4928.141(A) imposes on an electric distribution utility the requirement to provide consumers within its certified service territory “a standard service offer of all competitive retail electric services necessary to maintain essential electric service to consumers, including a firm supply of electric generation service.” Ohio Rev. Code Ann. § 4928.141(A) (2010). CSP and OPC recover their capacity charges from retail customers through the PUCO-approved SSO rates and, for shopping customers, through the wholesale FRR capacity charges to CRES Providers approved by this Commission.

<sup>5</sup> Ohio Rev. Code Ann. § 4928.14 (2010).

**B. The approved POLR charge and the wholesale RAA capacity charge are related to separate services that are based on distinct costs.**

As the prior discussion confirms, CSP's and OPC's POLR obligations address the right of retail customers to shop and subsequently return for generation service under the SSO rates. This section demonstrates that, contrary to Finding 4 of the Entry, the Companies' POLR charges were never intended to compensate CSP and OPC for meeting their wholesale FRR capacity obligations to CRES Providers that serve shopping customers.

The PUCO-approved retail POLR charges reflect the value of the customers' right, or *option*, to switch suppliers but retain the safety net of the SSO rate; *i.e.*, retail customers have the right to come back to the Companies, *if* electricity prices move in a way that makes switching back to CSP or OPC an economically attractive choice or if a CRES Provider turns back the customer or defaults on its obligations. The value of that option existed at the beginning of the 2009-2011 rate term covered by the last PUCO proceeding, independent of the actual outcomes that eventually materialize in the future. In other words, CSP and OPC were obligated at the outset of that term, based on then-current circumstances and uncertainties, to provide an SSO rate for the full three-year term and undertake the attendant POLR risk. The simple hypothetical example in the diagram below illustrates the customers' POLR optionality and CSP's and OPC's attendant POLR risks:

Under this example, customers may stay on (or return to) the SSO rate in years 1 and 3, while they would likely shop in the market during year 2. CSP's and OPC's obligations to support the SSO price during the period covered by the PUCO rate orders was firmly established on the first day that the rates became effective, even though neither company could predict with certainty market prices (the dotted line) over the three subsequent years. The migration risk, for which the PUCO authorized the POLR charges, is illustrated in year 2 when customers could leave the SSO to pursue more favorable market prices. The retail POLR charge reflects the cost of the customers' POLR optionality, and the amounts collected through the POLR charges allow CSP and OPC to "hedge" against market changes and ride out fluctuations in SSO load. As explained in the next section, the POLR charge does not reflect the cost of CSP's and OPC's installed capacity.

**C. CSP's and OPC's POLR charges approved in the ESP Cases simply do not reflect the capacity costs recovered under the FRR charges.**

During the entire period in which the current retail POLR charges have been in effect, CSP and OPC have charged CRES providers the FRR capacity charge as provided for under the RAA. And during that entire time, neither the PUCO nor any CRES providers or shopping customers have ever argued that the FRR charges were duplicative of the POLR charges. Now that CSP and OPC have sought to increase the FRR charges to recover their costs, commenters in the FERC proceeding have seized upon snippets of AEP testimony taken out of context to argue that FRR charges coupled with CSP's and OPC's POLR charges results in a double charge. This is apparently the premise of the PUCO's own comments before the FERC (Attachment A to this application for rehearing). Of course, eliminating the FRR capacity charge would result in CRES providers getting free use of CSP's and OPC's capacity resources, which would be highly inequitable and inconsistent with express provisions of the RAA. When the PUCO's decision to

adopt the retail POLR charges and AEP's supporting POLR testimony are examined in detail, it becomes obvious that there was never any intention that the POLR charges would displace the FRR capacity charges or serve as the "state compensation mechanism" under the RAA. Indeed, neither the RAA nor the FRR were raised in the PUCO proceeding in connection with the deliberation of the appropriate POLR charges.

The cost of CSP's and OPC's POLR obligations result from trying to balance and quantify two of the goals of electric restructuring in Ohio, not from the cost of AEP's installed capacity. The first goal is to preserve the customers' right to take competitive generation service from their electric distribution company or from CRES Providers. The second goal is to provide customers rate stability and protection from the volatility of short-term market prices through the existence of a default standard service offer. In the proceedings before the PUCO, AEP's POLR charge witness was J. Craig Baker, who described the potential conflict between these two goals in his direct testimony as follows:

Despite the many changes to Ohio's customer choice legislation enacted in 1999 (Am. Sub. S.B. No.3 - S.B.3) that were made by S.B. 221, the fundamental premise of S.B. 3 remains. That is, all ***customers are free to switch to receive generation service from Competitive Retail Electric Service (CRES) providers.*** Further, customers can become part of a government aggregation group as another form of switching.

***Conversely, customers also are free to continue to rely on their incumbent utility for generation service at a tariff rate.*** Even those customers who switch can choose to return to their incumbent utility. Further, if the CRES provider to whom customers switched or the supplier to the government aggregation group were to default in its service obligation, those customers can return to the incumbent utility.

***This flexibility*** leaves the Companies in the precarious position of being exposed to losing generation service load when the market price is low but needing to stand ready to begin serving that load again when the market price is high, and in the case of a CRES or other supplier default, doing so at a moment's notice. There is a definite and significant cost associated with providing ***this flexibility.***

In addition to the challenges of providing capacity and energy on short notice, ***the Companies would provide service to returning customers at the SSO rate***

*(even though they are likely to be returning because market prices exceed the SSO).*

*ESP Cases*, Cos. Ex. 2A at 25-26 (emphasis added) (attached hereto as Attachment B).

Further, Mr. Baker testified:

[C]ustomers have the right to leave the utility and take service from an alternative supplier as well as the right to return to AEP's ESP pricing if future market price fluctuations make it advantageous for them to do so. AEP is holding the other side of that arrangement; AEP is obligated to stand ready to handle whatever load fluctuations may result from such switching. The financial risk inherent in such arrangements is a result of the asymmetrical relationship that exists between the two parties - one party is holding the rights that will bring financial benefits to themselves and at the same time impose financial losses on the other party.

*Id.* at 30. Mr. Baker went on to describe "the keys to understanding AEP's cost of providing its POLR obligation":

Wholesale price volatility and the asymmetrical impacts of retail choice - *i.e.*, the customer is the party who holds the ability to choose if and when they want to take service from a competitive retail provider or under the utility's ESP plan - are the keys to understanding AEP's cost of providing its POLR obligation. The customers' option to switch providers can be demanded opportunistically, at the economic convenience of customers. In fact, Ohio's desire to create structures and incentives to encourage customer switching is one of the stated policy goals of SB 221. When determining the cost of AEP's POLR obligation, it is important to realize that in financial terms, such one-sided rights that customers receive through retail choice are equivalent to a series of options on power. When it becomes apparent that there are economic benefits from switching between a competitive supplier and the ESP price, the rational customer will exercise his or her flexibility to change providers. AEP, however, will bear the difference between market and ESP prices as a loss. Thus, an option pricing model provides an effective way to calculate the cost of AEP's POLR obligation.

*Id.* at 30-31. Finally, during cross-examination, Mr. Baker provided a very succinct description of the risks that the companies were attempting to quantify in determining the cost of the POLR obligation:

In my view the [proposed POLR charge] is the series of options that are provided to customers, the right to leave the customer's tariff and go back -- the SSO tariff price and go to the market when it's economically attractive and then come back

to the SSO rate when that's economically attractive. That's my definition of POLR.

*ESP Cases*, Tr. Vol. XIV at 193:18-25 (attached hereto as Attachment C).

When read in context, it becomes readily apparent that the Entry's conflation of the two charges is arbitrary and capricious. The decision in the *ESP Cases* contains absolutely no discussion of the CRES Providers' FRR obligations or the RAA provisions under which CSP and OPC serve as "FRR Entities" to enable the CRES Providers to meet those obligations. Rather, after hearing the evidence and considering the proposal, the PUCO acknowledged that AEP's proposed POLR charge would cover two distinct risks: "the cost of allowing a customer to remain with the Companies, or to switch to a [competitive] provider and then return to the Companies' SSO after shopping" and noted that CSP and OPC "utilized the Black-Scholes Model to calculate their cost of fulfilling the POLR obligation, comparing customers' rights to 'a series of options on power.'" *ESP Cases* (Mar. 18, 2009) at 38-39 (internal citations omitted) (included as Attachment C to FirstEnergy's Protest). The PUCO also recognized its Staff's position that there are "two risks involved: one risk is the risk of customers returning to the SSO and the other risk is that the customers leave and take service from a [competitive] provider (migration risk)." *Id.* at 39. Regarding the migration risk (that customers could migrate, *i.e.*, leave when market prices drop below the SSO rate during the period of the ESP), the PUCO granted most of the requested POLR revenue requirement in order to compensate AEP Ohio for that risk. *Id.* at 40. Regarding the second risk (a customer shopping and then returning to the SSO rate when the market price goes back up), the PUCO permitted shopping customers to bypass the POLR charge only if they agree (at the time they begin shopping) to pay a market price if they end up returning to SSO service later. *Id.*

Finding 4 of the Entry does not cite even a single passage from the *ESP Cases* record wherein the RAA or the FRR obligations were ever mentioned in the context of the POLR charges, let alone any record-basis that the POLR charges were approved for those purposes. The silence speaks volumes. Of course, there is no record basis to conclude that the approved POLR charges reflect the cost of capacity to support a CRES provider's generation service to a shopping customer and, likewise, no basis to presume that the POLR charge somehow overlaps with the wholesale capacity charge or otherwise results in double recovery for AEP Ohio. Indeed, if the Commission had believed that the POLR charge already resulted in recovery of such capacity charges for AEP Ohio, there would have been no reason to further adopt the RPM-based wholesale capacity charge for AEP Ohio – as Finding 4 purports to do. Rather, Finding 4's conclusion that the POLR charge already reflects such capacity costs and simultaneous decision to adopt the RPM-based wholesale capacity charge fundamentally amounts to a *non sequitur* and serves to further compound the Commission's error.

Similarly, the Commission in the *ESP Cases* ordered that the Companies' approved POLR charge could be avoided by shopping customers who promise to pay a market rate if they return to the SSO. (*ESP Cases*, Opinion and Order at 40.) To the extent that the POLR charges reflect capacity costs associated with shopping customers, this would mean that such customers would receive free capacity during the entire period when they shop (which could be permanent). This makes no sense and further reveals that a charge that is bypassable by a customer cannot possibly be recovering capacity costs for serving that same customer. Thus, not only would this be unduly discriminatory and anti-competitive – to the unfair advantage of competing CRES providers serving those shopping customers – but it would also mean that customers receive free

capacity at the expense of AEP Ohio. On rehearing, the Commission should recognize that the Entry misapprehends the POLR charge approved in the *ESP Cases* and reverse Finding 4.

**D. The Commission's decision in the Ormet Case and the Eramet Case also directly undercut the Entry's present finding that the approved POLR charges already reflect the capacity cost associated with shopping customers.**

Finally in this regard, the Entry's presumption that the POLR charges reflect capacity costs of serving shopping customers is flatly inconsistent with other decisions wherein the Commission had occasion to interpret and clarify the POLR charges after the decision in the *ESP Cases*. More specifically, in its July 15, 2009 Opinion and Order in Case No. 09-119-EL-AEC (*Ormet Case*), the Commission addressed the POLR charges as follows:

The Commission finds that under the terms of the unique arrangement AEP-Ohio will be the exclusive supplier to Ormet (Tr. I at 37-38; Tr. IV at 484). Therefore, there is no risk that Ormet will shop for competitive generation and then return to AEP-Ohio's POLR service. If AEP-Ohio were to retain these charges, AEP-Ohio would be compensated for a service it would not be providing. \* \* \* During the term of the unique arrangement, AEP-Ohio shall credit any POLR charges paid by Ormet to its economic development rider in order to reduce the impact of the unique arrangement on other ratepayers' bills.

*Ormet Case*, Opinion and Order at 13-14. This position was upheld by the Commission in its September 15, 2009 Entry on Rehearing in the *Ormet Case*.

Similarly, in its October 15, 2009 Opinion and Order in Case No. 09-516-EL-AEC (*Eramet Case*), the Commission found that the customer agreed not to shop during the term of the proposed reasonable arrangement. *Eramet Case*, Opinion and Order at 7 ("Based upon the evidence in the record, the Commission finds that that Eramet knowingly decided that it would not shop for electric service in exchange for securing a long-term power contract with CSP.") As with the *Ormet Case*, the Commission decided in the *Eramet Case* to eliminate the POLR charge for the affected customer:

If there is no risk of Eramet shopping and returning to standard offer service during CSP's ESP, CSP will incur no costs for providing POLR service that can be recovered under Section 4905.31, Revised Code. Accordingly, the Commission finds that CSP should credit any POLR charges paid by Eramet to its economic development rider in order to reduce the amount of delta revenues recovered from other ratepayers.

*Eramet Case*, Opinion and Order at 8-9. This decision was upheld on the Commission's March 24, 2010 Entry on Rehearing in the *Eramet Case*.

Thus, both the decision in the *Ormet Case* and the decision in the *Eramet Case* clearly and unequivocally hold that the Companies POLR charges are based strictly on the migration risk associated with shopping and that risk is nonexistent (and the attendant cost being recovered through the POLR charges is not incurred) where a customer agrees not to shop.<sup>6</sup> There is no discussion of the POLR charges reflecting capacity costs of any kind. Indeed, the direct and explicit impact of the Commission's decisions in the *Ormet Case* and the *Eramet Case* is that the involved customers avoid the POLR charges even though AEP Ohio was deemed to be the exclusive supplier for those customers and would clearly incur capacity costs in serving them. Hence, those decisions confirm that the POLR charges do not reflect capacity costs.

**II. The Commission's Entry establishing an interim wholesale capacity rate is unreasonable and unlawful because the Commission is a creature of statute and lacks jurisdiction under both Federal and Ohio law to issue an order affecting wholesale rates regulated by the Federal Energy Regulatory Commission.**

The Commission's attempt in Finding 4 to "expressly adopt as its state compensation mechanism the AEP Ohio Companies' charges established by the reliability pricing model's three-year capacity auction conducted by PJM" is not sustainable. It appears that the Commission has determined that, in light of the rates proposed by the Companies' FERC filing, it

---

<sup>6</sup> AEP Ohio's reference to these decisions in no way endorses them. AEP Ohio has challenged the decisions before the Supreme Court of Ohio in Case Nos. 2009-2060, 2010-722 and 2010-723. But the decisions do represent the Commission's views on the approved POLR charges and that is the context of AEP Ohio referencing them here.

was necessary for the Commission to step in and establish its own mechanism for the Companies to recover FRR capacity costs from CRES providers. In particular, the Commission's Entry purports to establish, on an interim basis, the prices that the Companies may charge for providing capacity to support CRES providers' sales to retail customers. But the provision of generation capacity to CRES providers is a wholesale transaction that falls within the exclusive ratemaking jurisdiction of the FERC.<sup>7</sup> The FERC recently reiterated that its "authority under the FPA includes the exclusive jurisdiction to regulate the rates, terms and conditions of sales for resale of electric energy in interstate commerce," and that efforts by a state commission to set the rate for the wholesale sale of electric energy are preempted by FERC's exclusive jurisdiction.<sup>8</sup> Recognition of FERC's exclusive jurisdiction over the FRR capacity compensation received from "alternative retail LSEs" (*i.e.*, the CRES providers) is memorialized in Section D.8, which expressly reserves the right of each "FRR Entity" (*i.e.*, CSP and OPCo) to make filings under FPA Section 205, and the right of each retail LSE (*i.e.*, a CRES Provider) to "at any time exercise its rights under Section 206 of the FPA."

Alternatively, even assuming the Commission is not precluded by federal law from regulating wholesale transactions involving capacity (although it clearly is), the Commission cannot adopt as the state compensation mechanism for the Companies the current capacity charges the Companies charge CRES Providers under the PJM Tariff. That action is entirely at odds with Sec. D.8. That section sets out three possible alternatives for the recovery of FRR

---

<sup>7</sup> See FPA Section 201(b), 16 U.S.C. § 824(b) (2006); *e.g.*, *Mississippi Power & Light Co. v. Mississippi ex rel. Moore*, 487 U.S. 354, 374, (1988) ("Congress has drawn a bright line between state and federal authority in the setting of wholesale rates"); *FPC v. Southern Cal. Edison Co.*, 376 U.S. 205, 215-16 (1964) ("Congress meant to draw a bright line easily ascertained, between state and federal jurisdiction, making unnecessary such case-by-case analysis. This was done in the Power Act by making FPC jurisdiction plenary and extending it to all wholesale sales in interstate commerce..."); *U.S. v. Public Utilities Comm'n of California*, 345 U.S. 295, 308 (1953) ("Congress interpreted [*Attleboro*] as prohibiting state control of wholesale rates in interstate commerce for resale, and so armed the Federal Power Commission with precisely that power").

<sup>8</sup> *Public Utilities Comm'n of California*, 132 FERC ¶ 61,047 at P 64 (2010).

capacity charges: 1) a state compensation mechanism; 2) the establishment of capacity charges through the capacity auction in accordance with Attachment DD to the PJM Tariff as the default option in the event there is no state compensation mechanism; or 3) a cost-based method or other "just and reasonable" method specific to the FRR Entity based upon a filing made "at any time" and approved by the FERC. Section D.8 does not allow the Commission to adopt the federal default option as a temporary or permanent state compensation mechanism; these are mutually exclusively options, as evidenced by the fact that the default option becomes available only if there is no state compensation mechanism. And, it clearly does not allow the Commission to preempt the FRR Entities' right under Section 205 of the Federal Power Act to propose a change in the basis for compensating it for its capacity obligations by locking in the current capacity charges established in accordance with Attachment DD to the PJM Tariff to the exclusion of any alternative basis the FRR Entity might otherwise be permitted to propose.

Moreover, the Commission is a creature of statute and has no statutory authority beyond that conferred by the General Assembly. *See Discount Cellular, Inc. v. Pub. Util. Comm.*, 112 Ohio St.3d 360, 373, 2007-Ohio-53, 859 N.E.2d 957 (2007) (citing *Reading v. Pub. Util. Comm.*, 109 Ohio St.3d 193, 2006-Ohio-2181, 846 N.E.2d 840, ¶ 13 (2006)). Ohio law does not confer upon the Commission – even assuming that doing so would be permitted under Federal law (which it is not) – the authority to regulate wholesale transactions. No provision of Title 49, Ohio Rev. Code, authorizes the Commission to establish wholesale prices for the Companies provision of capacity that CRES providers require in order to serve their retail electric generation service customers. Even though the Commission suggests that it is acting out of concern for “retail competition in Ohio” (December 8 Entry, at Finding 5), “[a] concern for the future of the competitive market does not empower the

commission to create remedies beyond the parameters of the law.” *Industrial Energy Users v. Pub. Util. Comm.*, 117 Ohio St.3d 486, 491, 2008-Ohio-990, 885 N.E.2d 195 (2008) (citation omitted).

When the General Assembly wants to empower the Commission to perform acts delegated to it under federal law, it must confer statutory jurisdiction to do so – as it has done in order to implement the 1996 Telecommunications Act through enactment of Section 4927.04, Revised Code. The General Assembly has not chosen to do so in this instance. Thus, even if FERC had delegated authority to establish wholesale capacity charges (which it has not), the Commission lacks subject matter jurisdiction under Ohio law to do so. Accordingly, Finding 4 of the Entry should be reversed and vacated on rehearing.

**III. The Entry was issued in a manner that denied AEP Ohio due process and violated statutes within Title 49 of the Revised Code, including Sections 4903.09, 4905.26, and 4909.16, Revised Code.**

There is another, and more fundamental, flaw in the Commission’s determination in Finding 4 of its Entry to adopt the current RPM auction prices as the state compensation mechanism for the Companies during the pendency of its review in this proceeding. Even assuming the Commission has subject matter jurisdiction to establish a wholesale capacity charge (which it does not), multiple provisions within Title 49 of the Revised Code require that the Commission provide a public utility due process prior to unilaterally establishing or changing a rate. Consequently, Finding 4 of the Entry violates Ohio law and should be reversed and vacated on rehearing.

The Commission “may temporarily alter [or] amend” an existing rate without a hearing only “[w]hen the . . . commission deems it necessary to prevent injury to the business or interests of the public or of any public utility of this state in case of any emergency[.]” §4909.16, Ohio

Rev. Code. The Companies' filing of a FERC application seeking to modify the basis on which it recovers its capacity costs, however, would not credibly qualify as an "emergency" for which unilateral, immediate action by the Commission would be necessary "to prevent injury to the business or interests of the public[.]" *Id.* Regardless, the Commission's December 8 Entry gives no indication that the Commission was acting pursuant to §4909.16.

Absent an emergency situation, the Ohio Revised Code requires the Commission to provide notice and a public hearing before setting a utility rate, even if the ratemaking is only temporary. *See, e.g., Lucas Cty. Commrs. v. Pub. Util. Comm.*, 80 Ohio St. 3d 344, 347, 686 N.E.2d 501 (1997) (holding that, "[p]ursuant to R.C. 4905.26 and 4909.15(D), the commission may conduct an investigation and hearing, and fix new rates to be substituted for existing rates, if it determines that the rates charged by a utility are unjust or unreasonable."). In *Ohio Bell Telephone Co. v. Public Utilities Commission of Ohio*, 64 Ohio St. 3d 145, 593 N.E.2d 286 (1992), the Court considered a Commission order prohibiting local exchange telephone companies ("LECs") from billing customer-owned, coin-operated telephone ("COCOT") providers for directory assistance calls placed by COCOT phone users. When the Commission issued that order, it explained that the prohibition was simply "an interim policy position" while the Commission investigated complaints that ratepayers were unfairly subsidizing the LECs' directory assistance service. *Id.* at 146. The Supreme Court of Ohio reversed and vacated the Commission's order. The Court held that "[r]egardless of how the action is characterized by the commission, it is still a rate change subject to the procedural requirements of R.C. 4905.26." *Id.* at 148. Accordingly, the Commission was required to provide notice and a public hearing under §4905.26, Ohio Rev. Code, which states in relevant part:

upon the initiative or complaint of the public utilities commission, that any rate, fare, charge, toll, rental, schedule, classification, or service, . . . is in any respect

unjust, unreasonable, unjustly discriminatory, unjustly preferential, or in violation of law, . . . if it appears that reasonable grounds for complaint are stated, the commission shall fix a time for hearing and shall notify complainants and the public utility thereof. . . . The parties to the complaint shall be entitled to be heard, represented by counsel, and to have process to enforce the attendance of witnesses.

*Id.* The Court explained that the statute required "a formal evidentiary hearing," rather than the "notice and comment format" that the Commission had attempted instead to use. *Id.* For the same reasons, the Commission may not impose a wholesale capacity charge on the Companies without notice and a full evidentiary hearing. The Commission's action in this proceeding purports to effect a rate change -- it imposes a FRR capacity cost-recovery mechanism different from the mechanism that the Companies have sought FERC's approval to apply. Per the Supreme Court's finding in *Ohio Bell Telephone*, "before the commission may order a change in utility rates on policy grounds, the procedural requirements of R.C. 4905.26 for notice and a public hearing must first be satisfied." *Id.* The Commission here has not satisfied those statutory requirements. Regardless, the Commission provided no notice to the Companies of its intention to establish the rates that Finding 4 of its Entry purports to set. There is no rate-setting process contained in Ohio law that permits the Commission to establish rates for a public utility without first notifying the public utility of its intention to set rates. As a result, the Commission also failed to provide the Companies with any opportunity to be heard regarding the justness and reasonableness of the rates that the Commission established. The rates are not just and reasonable because they chronically under-recover the Companies' costs.

In addition, Section 4903.09, Ohio Rev. Code, requires that, in all contested cases, the Commission must make a complete record of its proceedings, including a transcript of all testimony and exhibits, and the Commission must file, with the record of the case, findings of fact and written opinions setting forth the reasons prompting its decisions, based upon those

findings of fact. In this case, the results of which the Companies vigorously contest, the Commission created no record basis for the establishment of the rates that it set. Perhaps not surprisingly, as a result, its Entry provides virtually no explanation of the basis for and manner in which the Commission arrived at its decision to establish the rates that it set. Where the Commission's order fails to state specific findings of fact, supported by the record, and fails to state the reasons upon which the conclusions in the Commission's order were based, the order fails to comply with the requirements of §4903.09, Ohio Rev. Code, and is, therefore, unlawful. *Motor Service Co. v. Pub. Util. Comm.*, 39 Ohio St.2d 5, 313 N. E.2d 803 (1974). See also *Allnet Comms. Serv. v. Pub. Util. Comm.*, 70 Ohio St. 3d 202, 209, 638 N.E.2d 516 (1994) (holding that the Commission must at least "suppl[y] some factual basis and reasoning based thereon in reaching its conclusion."). For all of these reasons, Finding 4 of the Commission's December 8 Entry failed to provide AEP Ohio with the important due process protections provided by Title 49 of the Ohio Revised Code and must be reversed.

**IV. Finding 4 of the Entry and subpart 1 of Finding 5 must be reversed and vacated because they are in direct conflict with, and preempted by, federal law.**

The Commission lacked jurisdiction to issue Finding 4 and subpart 1 of Finding 5 of the Entry because they are in direct conflict with, and preempted by, federal law. The Commission acknowledges that this proceeding was initiated in direct response to the Companies' filing of an application with FERC, under Schedule 8.1, Section D.8 of the RAA to change the basis for compensating the Companies for their capacity obligations to a cost-based method. Entry at ¶3, citing FERC Docket No. ER11-1995. By this proceeding the Commission is seeking to delay or derail the FERC's own review and adjudication of the Companies' application to propose a

change in the method for determining capacity charges.<sup>9</sup> As a result, the Commission's action – this proceeding – is an apparent attempt by the Commission to assert state jurisdiction in direct violation of federal law.

The central and common issue in this proceeding and in the pending FERC proceeding is the interpretation of Schedule 8.1, Sec. D.8 of the RAA. The RAA is a FERC-approved tariff and its interpretation and application falls within the exclusive jurisdiction of the FERC. *AEP Texas North Co. v. Texas Indus. Energy Consumers*, 473 F.3d 581, 585 (5th Cir. 2006) ("FERC, not the state, is the appropriate arbiter of any disputes involving a tariff's interpretation."). Thus, it is up to the FERC, not this Commission, to decide whether Ohio properly or effectively adopted a "state compensation mechanism" within the purview of Section D.8 in the Companies' *ESP Cases*. Similarly, it is up to FERC to decide if a state compensation mechanism can be properly or effectively initiated only after the FRR Entity has begun to collect capacity charges as determined in accordance with the PJM Tariff and in an effort to eliminate the FRR Entity's right to propose a change in method as expressly reserved in Schedule 8.1, Sec. D.8. Each of these issues falls within the exclusive jurisdiction of the FERC under the FPA. The Commission has already intervened in the pending FERC proceeding; it has and can continue to advance arguments that it has adopted, or yet may adopt, a state compensation mechanism in that proceeding.

That the Commission in this case is unlawfully intruding into an area reserved exclusively to the FERC is abundantly clear from settled precedent. The provision of service to CRES Providers is a wholesale transaction and as such it falls exclusively within the FERC's exclusive jurisdiction under FPA Section 201, 16 U.S.C. § 824(b), over "the sale of electric energy at wholesale in interstate commerce." *See generally, Mississippi Power & Light Co. v.*

---

<sup>9</sup> See note 3, *supra*.

*Mississippi ex rel. Moore*, 487 U.S. 354, 374 (1988) (recognizing the "bright line between state and federal authority in the . . . regulation of agreements that affect wholesale rates" and holding that states "may not consistent with the Supremacy Clause *conduct any proceedings* that challenge the reasonableness of FERC's [decisions]" (emphasis added)). FERC's exclusive jurisdiction unquestionably extends to the wholesale sale of capacity as well as the sale of energy. See e.g. *Conn. Dept. of Pub. Util. Control v. FERC*, 569 F.3d 477, 484 (D.C. Cir. 2009) ("[T]here is nothing special about capacity decisions that places them beyond the Commission's jurisdiction.")

The proceeding now pending before the FERC as Docket No. ER11-2183 is in effect a proceeding to amend the RAA by allowing the Companies to collect capacity charges on a cost-basis under Sch. 8.1, Sec. D.8 of the RAA. The FERC has the exclusive jurisdiction over that proposal to amend the tariff. To the extent that there is a question as to whether Ohio presently has a compensation mechanism in place in retail rates to compensate the Companies for their FRR capacity obligations that question may and should be resolved by the FERC. Consistent with the Supremacy Clause, this Commission may not usurp the FERC role in this regard. It may not do so by declaring *ipso facto* that a state mechanism was previously established. Nor can it do so by appropriating the current capacity charges determined under federal law and the federally-approved tariff as the state compensation mechanism.

Similarly, now that there is a proceeding pending before the FERC which specifically invokes the Companies' right under Section 205 of the FPA as reserved in a FERC-approved tariff, it is improper and unlawful for the Commission to initiate a proceeding to challenge the the Companies' capacity charges to CRES Providers. Under Section 205 of the FPA, 16 U.S.C. § 824d, FERC has the duty to ensure that all rates and charges for the transmission or sale of

electric energy or capacity subject to its jurisdiction are "just and reasonable." This federal statute imposes a duty on the Commission and a concomitant right on the Companies. *Atlantic City Elec. Co. v. FERC*, 295 F.3d 1, 10 (D.C. Cir. 2002). This right was memorialized in the RAA itself, but even if it had not been, the Companies' right to receive just and reasonable capacity charges could not have been undermined by the RAA. *Id.* (holding that a provision in an ISO operating agreement that required owners of transmission assets to give up their right to file changes in tariff rates, terms and conditions was unlawful as in conflict with Section 205 of the FPA). While Sch. 8.1, Sec. D.8 of the RAA recites that a state compensation mechanism may be established and may "prevail," it does not provide or suggest that the existence of a state mechanism, let alone the prospect of a someday-to-be state mechanism, abrogates FERC's plenary authority to review and determine whether charges within its jurisdiction are just and reasonable or waives the Companies' statutory right to petition the FERC to authorize changes in the methods by which the Companies are compensated for service subject to the FERC's jurisdiction.

Thus, separate and apart from the issues of whether this Commission might have established in the past a proper and enforceable state compensation mechanism consistent with Sec. D.8, federal law and its limited state authority, or whether it might yet do so at some time in the future -- issues which must be decided in the negative for the reasons already discussed -- at the present time with a proceeding pending before the FERC to review the Companies' proposed changes for recovering capacity costs associated with retail loads associated with CRES providers, it is beyond cavil that the Commission's Entry, which was expressly intended to stop the pending FERC proceeding, is preempted by federal law. Consistent with the Supremacy Clause,

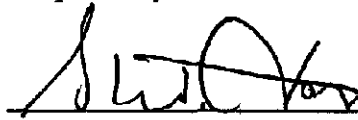

Congress has drawn a bright line between state and federal authority in the setting of wholesale rates and in the regulation of agreements that affect wholesale rates. States may not regulate in areas where FERC has properly exercised its jurisdiction to determine just and reasonable wholesale rates or to ensure that agreements affecting wholesale rates are reasonable.

*Mississippi Power & Light*, 487 U.S. at 374. Schedule 8.1., Sec. D.8 of the RAA is a provision within a FERC-approved tariff. Its interpretation and application is a matter within the exclusive jurisdiction of the FERC. By opening this proceeding, and creating a parallel state review of the reasonableness of the Companies' capacity charges, the Commission acted in flagrant disregard and disrespect of the supremacy of federal law.

## CONCLUSION

For the foregoing reasons, the Commission should grant rehearing to reverse and vacate the interim rate established in Finding 4 of the Entry and to narrowly tailor its review of the Companies' current capacity charges as proposed in Finding 5 to be consistent with its limited authority under both federal and state law.

**COMMENTS  
SUBMITTED ON BEHALF OF  
THE PUBLIC UTILITIES COMMISSION OF OHIO**

---

**INTRODUCTION AND BACKGROUND**

On November 24, 2010, American Electric Power Service Corporation ("AEPSC") on behalf of Columbus Southern Power Company ("CSPCo") and Ohio Power Company ("OPCo") (collectively, the AEP Ohio Companies) filed proposed formula rate templates under which each of the AEP Ohio Companies would calculate its respective capacity costs under Section D.8 of Schedule 8.1 of the Reliability Assurance Agreement (RAA). The Ohio-only filing reflects that the revised capacity charges will be billed to competitive retail electric service ("CRES") providers operating in the State of Ohio.

On November 26, 2010, the Federal Energy Regulatory Commission (FERC) issued its Combined Notice of Filings #1 inviting comments concerning

AEPSC's application by December 10, 2010. The Public Utilities Commission of Ohio (Ohio Commission) hereby submits its comments responding to AEPSC's application and FERC's invitation for public input in the above-captioned proceeding.

### DISCUSSION

On December 8, 2010, the Ohio Commission issued an entry (attached) in Case No. 10-2929-EL-UNC inviting comments from interested persons concerning the AEP Ohio Companies' capacity charges to Ohio's CRES providers. The Ohio Commission's entry notes that currently the PUCO-approved rates for the AEP Ohio Companies include recovery of capacity costs through provider-of-last-resort charges to certain retail shopping customers.<sup>1</sup> These rates are based on the continuation of the current FRR mechanism and the continued use of PJM's reliability pricing model's three-year auction results. The AEP Ohio Companies' filing for formula rates could impact this current mechanism. Consequently, the Ohio

---

<sup>1</sup> PUCO Case No. 08-917-EL-SSO, In the Matter of the Application of the Columbus Southern Power Company for Approval of its Electric Security Plan; an Amendment to its Corporate Separation Plan; and the Sale or Transfer of Certain Generating Assets; and PUCO Case No. 08-918-EL-SSO, In the Matter of the Application of Ohio Power Company for Approval of its Electric Security Plan; and an Amendment to its Corporate Separation Plan. See also, In the Matter of the Columbus Southern Power Company and the Ohio Power Company, Case No. 05-1194-EL-UNC.

Commission's investigation invites comments from interested persons concerning the following issues: (1) what changes to the current Ohio Commission mechanism are appropriate to determine the AEP Ohio Companies' Fixed Resource Requirement (FRR) capacity charges to the State of Ohio's CRES providers; (2) the degree to which the AEP Ohio Companies' capacity charges are currently being recovered through retail rates approved by the Ohio Commission or other capacity charges; and (3) the impact the AEP Ohio Companies' capacity charges will have on CRES providers and retail competition in the State of Ohio. Although the state compensation mechanism has implicitly been in place since the inception of AEP-Ohio's current Standard Service Offer,<sup>2</sup> the Ohio Commission expressly adopted as its state compensation mechanism the AEP Ohio Companies' charges established by the reliability pricing model's three-year capacity auction conducted by PJM. Currently, the 2010/2011 clearing price is equal to \$174.29 per MW-day.<sup>3</sup>

---

<sup>2</sup> *Supra* n.1.

<sup>3</sup> The 2010/2011 rate equals \$208.20 per MW-day including adders for transmission losses (3.4126%), the scaling factor (1.06633), and the pool requirement (1.0833). The 2010/2011 rate is effective through May 31, 2011. The 2011/2012 rate, which becomes effective on June 1, 2011, is equal to \$110.00 per MW-day (without the adders).

Consistent with Section D.8 of Schedule 8.1 of the RAA, which dictates that state imposed compensation mechanisms prevail in those instances where the state jurisdiction requires the load serving entity (LSE) (or switching customers) to compensate the FRR entity,<sup>4</sup> the Ohio Commission maintains that there is no current need for FERC to advance its proceeding regarding this matter because the Ohio Commission has a rate for capacity charges to CRES providers. Consequently, the Ohio Commission respectfully requests that FERC dismiss the application and close this investigation, or, in the alternative, suspend its final decision in this proceeding until the Ohio Commission has concluded its state proceeding. If FERC elects to hold the case in abeyance, the Ohio Commission will inform FERC, in the above-captioned proceeding, as to the outcome of its investigation.

---

<sup>4</sup> Schedule 8.1 reads as follows: "In a state regulatory jurisdiction that has implemented retail choice, the FRR Entity must include in its FRR Capacity Plan all load, including expected load growth, in the FRR Service Area, notwithstanding the loss of any such load to or among alternative retail LSEs. In the case of load reflected in the FRR Capacity Plan that switches to an alternative retail LSE, where the state regulatory jurisdiction requires switching customers or the LSE to compensate the FRR Entity for its FRR capacity obligations, such state compensation mechanism will prevail. In the absence of a state compensation mechanism, the applicable alternative retail LSE shall compensate the FRR Entity at the capacity price in the unconstrained portions of the PJM Region, as determined in accordance with Attachment DD to the PJM Tariff, provided that the FRR Entity may, at any time, make a filing with FERC under Sections 205 of the Federal Power Act proposing to change the basis for compensation to a method based on the FRR Entity's cost or such other basis shown to be just and reasonable, and a retail LSE may at any time exercise its rights under Section 206 of the FPA."

### CONCLUSION

The Ohio Commission thanks FERC for the opportunity to provide its  
Comments in this proceeding.

Dated at Columbus, Ohio this December 10, 2010.

BEFORE

THE PUBLIC UTILITIES COMMISSION OF OHIO

In the Matter of the Commission Review of )  
the Capacity Charges of Ohio Power ) Case No. 10-2929-EL-UNC  
Company and Columbus Southern Power )  
Company. )

ENTRY

The Commission finds:

- (1) Ohio Power Company and Columbus Southern Power Company (AEP-Ohio or the Companies) are electric light companies as defined in Section 4905.03(A)(3), Revised Code, and public utilities as defined in Section 4905.02, Revised Code. As such, the Companies are subject to the jurisdiction of the Commission in accordance with Sections 4905.04 and 4905.05, Revised Code.
- (2) Sections 4905.04, 4905.05, and 4905.06, Revised Code, grant the Commission authority to supervise and regulate all public utilities within its jurisdiction.
- (3) On November 1, 2010, AEP Electric Power Service Corporation, on behalf of AEP-Ohio, filed an application with the Federal Energy Regulatory Commission (FERC) in FERC Docket No. ER11-1995. At the direction of FERC, AEP refiled its application in FERC Docket No. ER11-2183 on November 24, 2010. The application proposes to change the basis for compensation for capacity costs to a cost-based mechanism and includes proposed formula rate templates under which the Companies would calculate their respective capacity costs under Section D.8 of Schedule 8.1 of the Reliability Assurance Agreement.
- (4) Prior to the filing of this application, the Commission approved retail rates for the Companies, including recovery of capacity costs through provider-of-last-

resort charges to certain retail shopping customers, based upon the continuation of the current capacity charges established by the three-year capacity auction conducted by PJM, Inc., under the current fixed resource requirement (FRR) mechanism. *In re Columbus Southern Power Company*, Case No. 08-917-EL-SSO; *In re Ohio Power Company*, Case No. 08-917-EL-SSO. See also, *In re Columbus Southern Power Company and Ohio Power Company*, Case Nos. 05-1194-EL-UNC et al. However, in light of the change proposed by the Companies, the Commission will now expressly adopt as the state compensation mechanism for the Companies the current capacity charges established by the three-year capacity auction conducted by PJM, Inc. during the pendency of this review.

- (5) Further, the Commission finds that a review is necessary in order to determine the impact of the proposed change to AEP-Ohio's capacity charges. As an initial step, the Commission seeks public comment regarding the following issues: (1) what changes to the current state mechanism are appropriate to determine the Companies' FRR capacity charges to Ohio competitive retail electric service (CRES) providers; (2) the degree to which AEP-Ohio's capacity charges are currently being recovered through retail rates approved by the Commission or other capacity charges; and (3) the impact of AEP-Ohio's capacity charges upon CRES providers and retail competition in Ohio.
- (6) All interested stakeholders are invited to submit written comments in this proceeding within 30 days of the issuance of this entry and to submit reply comments within 45 days of the issuance of this entry.

It is, therefore,

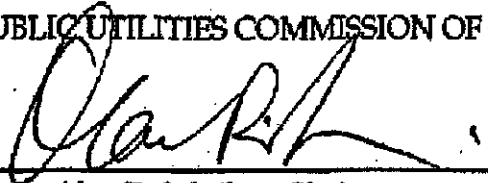

ORDERED, That written comments be filed within 30 days after the issuance of this order and that reply comments be filed within 45 days of the issuance of this entry. It is, further,

10-2929-EL-UNC

-3-

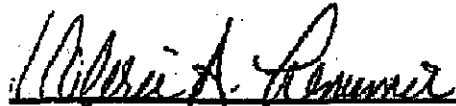

ORDERED, That a copy of this entry be served on AEP-Ohio and all parties of record in the Companies' most recent standard service offer proceedings, Case Nos. 08-917-EL-SSO and 08-918-EL-SSO.

DIRECT TESTIMONY OF  
J. CRAIG BAKER  
ON BEHALF OF  
COLUMBUS SOUTHERN POWER COMPANY  
AND  
OHIO POWER COMPANY  
PUCO CASE NO. - 08-917-EL-UNC  
PUCO CASE NO. - 08-918-EL-UNC

12 **PERSONAL DATA**

13 **Q. WHAT IS YOUR NAME AND BUSINESS ADDRESS?**

14 A. My name is J. Craig Baker and my business address is 1 Riverside Plaza,  
15 Columbus, Ohio 43215.

16 **Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?**

17 A. I am employed by American Electric Power Service Corporation (AEPSC)  
18 AEPSC is a subsidiary of American Electric Power Company, Inc. (AEP). My  
19 title is Senior Vice President – Regulatory Services.

20 **Q. WHAT ARE YOUR RESPONSIBILITIES AS SENIOR VICE PRESIDENT**  
21 **– REGULATORY SERVICES?**

22 A. I am responsible for AEP's utilities' interactions with the regulatory bodies in the  
23 eleven states in which they provides retail electric service as well as with the  
24 Federal Energy Regulatory Commission. This responsibility involves day-to-day  
25 interaction as well as periodic rate filings to ensure recovery of their cost of  
26 service. In addition, I am responsible for developing and advocating public policy  
27 positions on emerging or changing issues affecting AEP's utilities. Columbus

1 Southern Power Company (CSP) and Ohio Power Company (OPCO)  
2 (collectively, the Companies or AEP Ohio) are subsidiaries of AEP.

3 Q. WHAT IS YOUR EDUCATIONAL AND PROFESSIONAL  
4 BACKGROUND?

5 A. I received a Bachelor's Degree in Business Administration from Walsh College in  
6 1970 and a Masters Degree in Business Administration in Finance from Akron  
7 University in 1980. I joined the AEP System in 1968 and through 1979 held  
8 various positions in the Computer Applications Division. I transferred to the  
9 System Operation Division in 1979 and held positions of Administrative Assistant  
10 and Assistant Manager. In 1985, I took the position of Staff Analyst in the  
11 Controllers Department and, in 1987, I became Manager-Power Marketing in the  
12 System Power Markets Department. In 1991, I became Director, Interconnection  
13 Agreements and Marketing. I became Vice President-Power Marketing for  
14 AEPSC and Senior Vice President of Energy Marketing for AEP Energy Services,  
15 Inc. in November 1996 and August 1997, respectively. On July 1, 1998 I became  
16 Vice President of Transmission Policy for AEPSC. In January 2001, I became  
17 Senior Vice President - Regulatory Services.

18 In my positions of Manager of Power Markets, Vice President - Power  
19 Marketing and Senior Vice President of Energy Marketing I was involved day-to-  
20 day in analyzing market prices and developing sales offerings based on those  
21 market prices. As the senior person responsible for those activities during much  
22 of that period I was responsible for the results of the Company in this area. Since  
23 I left the day-to-day wholesale market activities I have been AEP's lead person

1 involved in the development of ISO/RTO's and their associated markets (energy,  
2 capacity, ancillary services, etc.). With AEP's experience in three RTOs I am  
3 well-versed in the workings of their markets.  
4

5 **PURPOSE OF TESTIMONY**

6 **Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY?**

7 A. My testimony addresses a variety of policy and other issues which relate to the  
8 Standard Service Offer (SSO) being proposed as part of the Companies' Electric  
9 Security Plan (ESP). It is important to note, however, that the Companies' ESP  
10 addresses considerably more than the SSO. Am. Sub. S.B. No. 221 (S.B. 221)  
11 places great emphasis on changing the way we as a society think about the  
12 sources and uses of electricity. These changes will of necessity require changes in  
13 the ways the Companies operate and plan for the future. AEP Ohio's President,  
14 Joseph Hamrock, addresses the Companies' response to these aspects of S.B. 221  
15 in his testimony. I also address a variety of other issues that relate to the  
16 Companies' ESP.  
17

18 **COMPARISON OF ESP TO EXPECTED RESULTS FROM MARKET RATE**  
19 **OFFER (MRO)**

20 **Q. ARE YOU FAMILIAR WITH THE CONTENT OF THE COMPANIES'**  
21 **ESP APPLICATIONS AND THE TESTIMONY OF MR. HAMROCK AND**  
22 **THE COMPANIES' OTHER WITNESSES?**

23 A. Yes, I am.

1 Q. CONSIDERING EACH COMPANY'S ESP, HOW DO THEY COMPARE  
2 TO THE EXPECTED RESULTS THAT WOULD OTHERWISE APPLY  
3 UNDER AN MARKET-RATE OFFER (MRO)?

4 A. The concise answer is that each ESP is more favorable in the aggregate for  
5 customers when compared to the expected results under an MRO. Moreover, the  
6 Companies' ESPs, which address a broad range of issues, will have the effect of  
7 stabilizing and providing certainty regarding retail electric service. The more  
8 expansive answer begins with a comparison of the SSO under the ESP compared  
9 to the SSO resulting from an MRO. In that regard, the SSO under the ESP is  
10 more attractive for customers than the SSO resulting from a market-rate offer.  
11 The favorable comparison, however, does not end there. As Mr. Hamrock's  
12 testimony explains, the Companies' ESPs contemplate various programs that not  
13 only will complement the state's economic development efforts generally, but  
14 will support the General Assembly's desire, as evidenced by several provisions of  
15 S.B. 221 to make Ohio a center for education, research and innovation in the areas  
16 of energy efficiency, energy management and advanced energy resources.

17 Q. FOCUSING ON THE ESP VERSUS MRO SSO, HOW DO YOU PROPOSE  
18 TO MAKE THAT COMPARISON?

19 A. Since the Companies' ESP is for the three-year period 2009 - 2011, it is  
20 reasonable to begin the comparison with a projection of an MRO-based SSO  
21 during that same time. The first step in determining the MRO-based SSO is to  
22 determine the extent of market price that would be blended with the prior year's  
23 SSO. As passed by the General Assembly, S.B. 221 contemplates ten percent of

1 market price in year one (2009) and no less than twenty percent in year two  
2 (2010) and no less than thirty percent in year three (2011).

3 **Q. HAS THE GENERAL ASSEMBLY ACTED TO MODIFY THE MARKET**  
4 **PRICE PERCENTAGE BLENDS FROM THOSE ENACTED IN S.B. 221?**

5 **A.** Yes. In Amended Substitute House Bill No. 562 (H.B. 562) the General  
6 Assembly modified the percentages. I have been advised by counsel that the ten  
7 percent in 2009 did not change. For 2010, however, the market price percentage  
8 blend will be amended to be no more than twenty percent. For 2011, the market  
9 price percentage blend will be amended to be thirty percent.

10 **Q. FOR PURPOSES OF THE COMPARISON OF THE ESP VERSUS MRO,**  
11 **DO THE COMPANIES HAVE AN OPINION CONCERNING WHICH**  
12 **PERCENTAGES OF MARKET PRICE SHOULD BE ASSUMED FOR**  
13 **THE ESP/MRO COMPARISON?**

14 **A.** Yes. The Companies' counsel has advised me that the proper comparison to  
15 make is to the market price percentage blends in effect at the time our ESP  
16 applications were filed. Consistent with that understanding, the Companies have  
17 assumed a MRO phase-in of 10 percent, 20 percent and 30 percent, which is  
18 permissible under either S.B. 221 or H.B. 562.

19 **Q. AT YOUR DIRECTION WAS THE EXPECTED COMPETITIVE**  
20 **MARKET PRICE OF FULL-REQUIREMENTS SERVICE FOR THE**  
21 **TERM 2009-2011 CALCULATED?**

22 **A.** Yes. The calculated price for full requirements service (or Competitive  
23 Benchmark) for the 2009-2011 term was \$85.32 for OPCO and \$88.15 for CSP.

1 The Competitive Benchmark prices were calculated as part of the Companies'  
2 obligation under S. B. 221 in order to provide the Commission with one of the  
3 components needed to evaluate the proposed ESP. These prices reflect a  
4 comprehensive, balanced calculation of the market cost of full requirements  
5 service for the 2009-2011 time period.

6 **Q. ARE THERE EXAMPLES WHERE COMPETITIVELY PRICED FULL**  
7 **REQUIREMENTS SERVICE HAS BEEN PROCURED FOR RETAIL**  
8 **CUSTOMERS?**

9 A. Yes. There have been a number of auctions in multiple states for full  
10 requirements service that was competitively bid in support of deregulation to  
11 fulfill customer load requirements.

12 **Q. WHAT RANGE OF PRICES HAVE OTHER SIMILAR AUCTIONS**  
13 **PRODUCED FOR FULL REQUIREMENTS SERVICE?**

14 A. The range of prices observed in other auctions have typically been either similar  
15 or higher than the Companies' Competitive Benchmark. For example, in New  
16 Jersey, results from competitive auctions for full requirements service over the  
17 last three years have ranged between \$99/MWh and \$120/MWh. This is a similar  
18 range to that observed for auction results for full requirements service in  
19 Delaware during the same time frame. As explained later in my testimony,  
20 energy and capacity comprise the majority of the total competitive price. New  
21 Jersey and Delaware would likely see higher prices due to both states having  
22 more transmission constraints than the AEP System.

1 Q. WHY WERE THE CALENDAR YEARS 2009-2011 SELECTED AS THE  
2 APPROPRIATE TIME FRAME TO PRICE FOR THIS PROCEEDING?

3 A. Calendar years 2009-2011 match the proposed time frame of the ESP and thus  
4 provide an 'apples to apples' comparison between the ESP and the Competitive  
5 Benchmark.

6 Q. HOW WERE THE PRICING COMPONENTS INCLUDED IN THE  
7 CALCULATION OF THE COMPETITIVE BENCHMARK  
8 DETERMINED?

9 A. S.B. 221 does not identify a comprehensive list of items that would be included  
10 by a supplier in providing retail electric service but it does provide some general  
11 guidance. Section 4928.20(J), Ohio Rev. Code, discusses the scenario in which  
12 customers that are part of a governmental aggregation and elect not to receive  
13 standby service, must pay the market price for competitive retail electric service  
14 upon returning to the Companies' generation service. The provision states that  
15 'such market price shall include, but not be limited to'

- 16 • Capacity
- 17 • Energy Charges
- 18 • All RTO charges, including but not limited to
  - 19 Transmission
  - 20 Ancillary services
  - 21 Congestion
  - 22 Settlement and Administrative Charges

- All other costs incurred by the utility that are associated with the procurement, provision and administration of that power supply.

**Q. WERE ANY OTHER SOURCES CONSIDERED IN DETERMINING WHAT PRICING COMPONENTS SHOULD BE INCLUDED?**

**A.** Yes. Processes in place in states with deregulated electricity markets were considered to understand the pricing components they used to set competitive generation rates in their respective auctions. In general, what I have been referring to as full requirements service used to develop the Companies' Competitive Benchmark, is very similar from state to state. The way in which various pricing elements are grouped and the specific labels applied to them vary, as one would expect, but the essence of what components are necessary to provide competitive generation service are largely similar across the various deregulated states.

For example, since the initiation of competitive procurement of market-priced supply in 2004, Maryland's utilities have relied on full-requirements contracts with wholesale suppliers to serve residential standard service load. These full-requirements contracts require sellers to supply:

- Energy
- Capacity
- Ancillary services
- Losses

- Any other electrical services (other than transmission and distribution services) necessary to deliver power to the customer's meter to serve that customer's requirements at all times

The Delaware Public Service Commission has developed a pricing framework in order to evaluate the competitive procurement bids submitted by individual auction participants. The following cost items are included in that pricing framework:

- PJM Western Hub On-Peak and Off-Peak Prices
- Electric Distribution Company (EDC) Specific Unhedged Congestion Adder
- EDC-Specific Marginal Loss Adder
- EDC Rate Class-Specific Load Shape Adder
- Capacity Price
- Loss Adder
- Ancillary Service Adder
- Renewable Portfolio Standard
- Transaction Cost and Risk Adder

**Q. WHY DID THE COMPANIES CHOOSE THE STATES OF DELAWARE AND MARYLAND TO USE THE CALCULATION OF FULL REQUIREMENTS PRICING COMPONENTS?**

**A.** Both Delaware and Maryland were among the first states to fully implement electric deregulation and have several years of auction results and methodology to examine. The experiences of Delaware and Maryland provide a reasonable and representative view of deregulated markets.

1 Q. WHAT PRICING COMPONENTS DID YOU INCLUDE IN YOUR  
2 CALCULATIONS OF 2009-11 PRICES?

3 A. Based on the components referred to in S.B. 221 and on what other competitive  
4 auctions have identified, the following components have been included:

- 5 • ATC Simple Swap (adjusted for basis) – This component is simply the  
6 price of the industry standard energy product traded through the broker  
7 market and on the electronic exchanges, such as the Intercontinental  
8 Exchange<sup>1</sup>. The 'basis adjustment' is the historical price relationship  
9 between different physical delivery points. For example, while the AEP-  
10 Dayton Hub is the liquid trading location where market quotes are  
11 available, AEP Ohio loads are settled by PJM at the AEP Zone. Since  
12 forward market quotes are not available for the AEP Zone, a pricing  
13 differential between the two points must be added to the AEP-Dayton Hub  
14 market prices to derive the market price for energy at the AEP Zone  
15 location.
- 16 • A Load following/shaping adjustment – This component adjusts the  
17 standard energy price (the ATC Simple Swap) to account for the fact that  
18 the Companies' customers do not use a constant volume of energy across  
19 all hours of each day. This component adjusts the price of the ATC  
20 Simple Swap to price the specific load shape of the Companies'  
21 customers. In addition, this component includes the pricing implications

---

<sup>1</sup> Intercontinental Exchange (ICE) is a leading electronic marketplace for energy trading and price discovery. ICE allows market participants direct access to energy futures and Over-the-Counter commodity products for oil and refined products, natural gas, power and emissions.

1 that arise from the inevitable uncertainty of exactly what the level of  
2 customer demand will be on any given day or hour over the 2009-2011  
3 time frame. The calculations are based on CSP's and OPCO's historical  
4 load shape by hour, publicly available historical PJM market prices and  
5 volatility to model the cost of the load's shape and variability.

- 6 • PJM Ancillary Services – This component prices the cost of ancillary  
7 services required by the PJM RTO to serve load in the PJM footprint.
- 8 • Losses – This component represents the costs of distribution losses that  
9 must be supplied in the form of additional energy in order to fulfill the  
10 load demand at the customer's meter.
- 11 • PJM Capacity Obligations – This component reflects the cost of PJM's  
12 required capacity obligations for load serving entities and was derived  
13 from the PJM Reliability Pricing Model (PJM Capacity Auction) results  
14 for the relevant time period.
- 15 • Transaction Risk – This component reflects a variety of risks that will vary  
16 based on the unique profile and business objectives of each individual  
17 bidder. Examples of such supplier risks include commodity price risk,  
18 migration risk and credit risks.
- 19 • A retail administration charge – This component is included to capture the  
20 various costs that a supplier would need to add to their full-requirements  
21 offer in order to cover the costs of participating in an auction and fulfilling  
22 the contractual obligations. Marketing, personnel, overhead, taxes and  
23 profits are all examples of cost components that need to be included to

arrive at a full requirements service market price. For example, the state of Connecticut includes a range of \$5/MWh to \$10/MWh for this charge.

**Q. WERE THE PRICING ELEMENTS USED IN DETERMINING THE COMPANIES' COMPETITIVE BENCHMARK SIMILAR TO THE METHODOLOGY EMPLOYED TO ESTABLISH THE ESTIMATED MARKET PRICE FOR ORMET?**

**A.** Yes. The pricing elements used in determining the Companies' Competitive Benchmark are similar to the pricing elements and methodology approved by the Commission in estimating the market price for Ormet. The Competitive Benchmark methodology is more complex, by necessity, than was utilized to price Ormet's unique situation. For example, although certain elements, including PJM ancillary services, were not specifically identified in the Companies' Ormet filing, the costs associated with these elements were handled through other mechanisms.

**Q. WHAT PRICING ELEMENTS HAVE THE LARGEST RELATIVE IMPACT ON THE PRICE OF THE COMPETITIVE BENCHMARK?**

**A.** When reviewing all of the elements that go into pricing the Competitive Benchmark, it is easy to lose sight of the relative importance of the individual pieces. The tables below provide the specific costs included in the Competitive Benchmark for both CSP and OPCO and their respective impacts on the total cost.

| CSP Estimated Full Requirements Service Price for<br>Calendar Year 2009-2011 Term |                    |                   |                   |
|---|--------------------|-------------------|-------------------|

2

3

4

5

6

As can be observed from the tables, the most significant contributors to the overall cost of full requirements service are the direct energy cost, the capacity obligation implemented by PJM, and the load shaping and following premium necessary to convert the standard quoted energy product to the specific load profiles of CSP and OPCO. Looking at the tables in more detail, the ATC Simple

1 Swap (the direct energy component) accounts for approximately 66% of the total  
2 price for CSP and approximately 68% of the total price for OPCO. The cost of  
3 the ATC Simple Swap, which can be readily observed, is the single largest  
4 determinant by a factor of four in the Competitive Benchmarks. The second  
5 largest factor is the PJM capacity component, which accounted for approximately  
6 14% and 12%, for CSP and OPCO respectively, of the total price. Thus, roughly  
7 80% of the total competitive benchmarks reflect the basic components of serving  
8 load, that being energy and capacity.

9 **Q. PLEASE DESCRIBE HOW THE COMPETITIVE BENCHMARKS WERE**  
10 **CALCULATED.**

11 A. The prices were calculated based on observable market inputs and commonly  
12 accepted pricing methodologies. For example, the market price of the ATC  
13 Simple Swap was obtained from a 3<sup>rd</sup> party, publicly available market source.  
14 The PJM Capacity Obligations were calculated using the published results of PJM  
15 capacity auctions. The volatility numbers necessary to model certain risk  
16 components were calculated directly from PJM historical pricing data and  
17 publicly available market quotes. All phases of calculating the Competitive  
18 Benchmarks relied on verifiable, public data; a comprehensive and intuitive set of  
19 pricing components; and a reliance on rigorous and commonly accepted  
20 computational methodologies. In areas that included qualitative decisions, such  
21 as the 'Retail Administration Charge', the experiences in other deregulated states  
22 was considered to reflect a balanced and reasonable approach in determining an  
23 appropriate charge.

1 Q. SINCE THE ATC SIMPLE SWAP HAS THE LARGEST NET IMPACT  
2 ON THE FULL REQUIREMENTS PRICES, HOW WERE THE MARKET  
3 PRICES USED IN YOUR CALCULATIONS SELECTED?

4 A. The ATC Simple Swap price is simply the standard quoted product that is actively  
5 traded on the electronic platforms such as ICE and through the broker market –  
6 but the price of that energy changes on a daily basis. Since the value of a full  
7 requirements service price is constantly changing, based on the daily moves in  
8 power prices, the challenge faced is selecting the appropriate time period to use in  
9 selecting energy pricing inputs. Changing the day or days used to gather the ATC  
10 Simple Swap pricing inputs will impact the ultimate price. This challenge was  
11 addressed by creating selection criteria that would provide the most accurate  
12 representation of the general market prices that have existed over the recent past.  
13 Instead of simply using the market prices from one day to gather the inputs for the  
14 ATC Simple Swap value, we chose a series of days. In addition, instead of  
15 selecting just one time frame from which to gather energy price inputs, we  
16 concluded that staggering the time frames across the first 7 months of 2008 would  
17 provide the most accurate representation of recent market conditions. For these  
18 reasons, an average of the market prices from the first week of each of the first  
19 three quarters of 2008 was used to calculate the ATC Swap price used in  
20 calculating the Competitive Benchmark.

1 Q. ARE THERE OTHER FACTORS TO CONSIDER IN MAKING THE ESP  
2 VERSUS MRO COMPARISON?

3 A. Yes, there are. The non-market portion of an MRO-based SSO can be adjusted  
4 for known and measurable changes in cost of fuel; purchased power costs; costs  
5 of complying with the supply and demand portfolio requirements, including  
6 renewable energy resource and energy efficiency requirements; and costs of  
7 environmental compliance requirements, including deratings of facilities  
8 associated with environmental compliance. For purposes of making the ESP  
9 versus MRO comparison, these costs will be recovered as part of the Companies'  
10 ESP-based SSO or as part of an MRO. While only a percentage of these costs  
11 will be reflected in an MRO-based SSO, since a decreasing percentage of the non-  
12 market portion of an MRO-based SSO will be reflected in that SSO, the SSO will  
13 reflect market price as the remaining component of the SSO.

14 Further, in an MRO context the FAC applicable to the non-market SSO  
15 component would not be phased-in since such a phase-in would be incompatible  
16 with a market pricing regime. In addition to the FAC impacts, the carrying costs  
17 associated with environmental investments which are part of the ESP's SSO, also  
18 would be included as part of the MRO's SSO.

19 Q. WHAT ARE THE RESULTS OF THE COMPANIES' ESP VERSUS MRO  
20 COMPARISON?

21 A. As shown on EXHIBIT JCB-2, the Companies' ESP is more favorable when  
22 compared to the MRO. The analysis reflected on the exhibit is conservative. For  
23 instance, the ESP evaluation includes the benefits arising from the gridSMART

1 and enhanced reliability programs, and the evaluation charges the related costs  
2 against the ESP. Therefore, the evaluation shows the ESP value being even closer  
3 to the MRO than is likely.

4 **Q. WOULD THE RESULT OF THE COMPARISON BE THE SAME IF THE**  
5 **MARKET PRICE PERCENTAGE BLEND REFLECTED THE**  
6 **AMENDMENT CONTAINED IN H.B. 562 TO THOSE PERCENTAGES?**

7 **A.** Yes. While the spread between the ESP and MRO would be reduced, the ESP  
8 still would be more favorable.

9 **Q. ARE THERE OTHER ASPECTS OF THE COMPANIES' ESP THAT**  
10 **SHOULD BE CONSIDERED IN COMPARING THE ESP TO AN MRO?**

11 **A.** Yes. Besides the comparison shown in my exhibit of the resulting SSO, there are  
12 other features of the ESP that support it being more favorable in the aggregate.  
13 For instance, the ESP alternative provides for single issue rate making for  
14 distribution service. This feature enables the Companies to proceed now with  
15 their gridSMART and enhanced distribution reliability initiatives. The MRO  
16 alternative does not appear to contemplate single issue distribution service rate  
17 making.

18 Another feature that is part of the Companies' ESP package that would not  
19 necessarily be included in an MRO is the shareholder funded commitment  
20 focused on economic development and low-income customer assistance.

21 Moreover, there are other features in the ESP with rate-related impacts  
22 that still would be included in an MRO and therefore have the same impact on  
23 both sides of the comparison. Those features relate to the statutory mandates

1 concerning alternative energy resources, energy efficiency and peak demand  
2 reduction, the provider of last resort obligation, and the non-mandated, but  
3 obviously appropriate, economic development/job retention efforts.

4  
5 **PHASE-IN OF FAC EXPENSES**

6 **Q. ARE THE COMPANIES PROPOSING TO PHASE-IN THE EXPENSES**  
7 **THAT WOULD OTHERWISE FLOW THROUGH THE FAC DESCRIBED**  
8 **BY COMPANIES' WITNESS MR. NELSON?**

9 A. Yes they are. The operation of the FAC proposed by Mr. Nelson accommodates a  
10 phase-in and Mr. Assante describes the accounting associated with the phase-in,  
11 including the accounting requirements for the Companies to be able to provide a  
12 phase-in plan.

13 **Q. WHY ARE THE COMPANIES PROPOSING THE FAC, ALONG WITH**  
14 **THIS PHASE-IN?**

15 A. The FAC is an appropriate way to reflect changes in the costs of the various  
16 components of the FAC. In addition to being consistent with provisions within  
17 S.B. 221 that authorize recovery of such costs through a fuel clause, the proposed  
18 FAC advances the policy outlined in Section 4928.02(G), Ohio Rev. Code, to  
19 recognize the continuing emergence of competitive electricity markets through  
20 the development and implementation of flexible regulatory treatment, and it also  
21 advances the policy outlined in Section 4928.02(J), Ohio Rev. Code, to provide  
22 coherent, transparent means of giving appropriate incentives to technologies that  
23 can adapt successfully to potential environmental mandates. The basic reason for

1 the phase-in relates to the history of the fuel and fuel-related cost components  
2 included in the FAC and the cost levels of those components in the Companies'  
3 current rates. The fuel clauses that were included in the Companies' unbundled  
4 rates in their Electric Transition Plan proceeding were the EFC rates in effect on  
5 October 5, 1999. The unbundled generation rates, including the October 5, 1999  
6 EFC were frozen for five years, through the end of 2005.

7 In the Companies' RSP case, each of the Company's generation rates were  
8 increased in 2006, 2007 and 2008 by fixed percentages – three percent for CSP  
9 and seven percent for OPCO. Those percentage increases were intended to move  
10 the Companies' generation rates closer to market-based rates and to support the  
11 Companies' ability to finance projected capital investments associated with  
12 environmental compliance facilities. Those increases were not cost-of-service  
13 based and were not characterized as being applicable to any particular cost  
14 component such as the October 5, 1999 EFC rate.

15 In the context of implementing the FAC it is necessary to establish a  
16 baseline that represents the level of FAC costs that are reflected in current rates.  
17 The difference between that baseline and the projected 2009 FAC costs would be  
18 the basis for the initial FAC costs to be recovered in 2009.

19 It would not be unreasonable for the Companies to take the position that  
20 the percentage rate increase in the RSP case did not increase the Companies'  
21 recovery of the cost components that will be included in the FAC. However, in  
22 an effort to reflect a more moderate approach the Companies are proposing to  
23 establish a baseline which assumes that the annual RSP fixed increase percentages

1       acted to increase the recovery of the components that will be in the FAC. That is,  
2       to treat it as if the FAC components were increased by three percent for CSP and  
3       seven percent for OPCO.

4               Even that more moderate approach, however, still leaves a substantial  
5       difference between the baseline and the projected 2009 FAC costs. In order to  
6       further moderate the impacts of implementation of the FAC the Companies have  
7       proposed a phase-in. The goal of the FAC phase-in is to hold annual total rate  
8       increases to approximately fifteen percent for each rate schedule in the  
9       Companies' tariffs.

10    Q       HOW WAS THE DECISION MADE TO TARGET THE INCREASE TO  
11            APPROXIMATELY FIFTEEN PERCENT?

12    A.       The fifteen percent target is judgmental. It must be recognized that the factors  
13            primarily driving the increases are related to rapidly increasing fuel expenses and  
14            environmental compliance investments that the Companies have made. In  
15            addition, the Companies believe the time is right to proceed with advanced  
16            distribution reliability programs and gridSMART. Finally, there are obvious rate  
17            impacts associated with several of the mandates found in S.B. 221.

18               The long and short of it is that addressing these myriad factors results in  
19       rate increases. The Companies' phase-in proposal seeks to levelize the impact on  
20       customers in a manner that makes the most sense. I should note, as Mr. Hamrock  
21       does in his testimony, that the target of approximately fifteen percent will not  
22       include impacts from the Transmission Cost Recovery Rider or from new  
23       government mandates.

1 Q. HOW DOES THE RATE IMPACT TARGET OF APPROXIMATELY FIFTEEN  
2 PERCENT COMPARE TO ELECTRIC UTILITY RATE INCREASES BEING  
3 AUTHORIZED IN OTHER STATES?

4 A. Looking at the other companies on the AEP system with recent rate activity the  
5 range of requested rate increase ranged from 20%-34%.

6 Q. DO YOU HAVE AN ESTIMATE OF THE FAC PHASE-IN PERCENTAGES  
7 THAT MIGHT OCCUR, GIVEN THE COMPANIES' RATE IMPACT  
8 TARGET OF APPROXIMATELY FIFTEEN PERCENT?

9 A. Yes. Under the proposed phase-in, the increase from the baseline to projected  
10 2009 FAC costs would approximate the following schedule:

|                       | <u>CSP</u> | <u>OPCO</u> |
|-----------------------|------------|-------------|
| First Bill Cycle 2009 | 57%        | 18%         |
| First Bill Cycle 2010 | 100%       | 62%         |
| First Bill Cycle 2011 | 100%       | 100%        |

11 Q. IN THE PROJECTED 2009 FAC COSTS USED BY MR. NELSON, DID  
12 YOU DIRECT HIM TO REFLECT AN INCREMENT OF PURCHASED  
13 POWER ON A SLICE OF SYSTEM BASIS FOR EACH COMPANY  
14 EQUIVALENT TO FIVE PERCENT OF THAT COMPANY'S LOAD?

15 A. Yes, I did.

16 Q. WHY WOULD THE COMPANIES PURCHASE THIS POWER?

17 A. As part of the ESP, the Companies propose to purchase power on a slice-of-  
18 system basis in increasing increments during each year of the ESP. The  
19 increments are five percent in 2009, ten percent in 2010 and fifteen percent in  
20 2011. These amounts represent half the market rate impact on customers' rates  
21 that likely would result from implementing the MRO alternate. Therefore, these

1 purchases can be seen as a limited feature for the continuing transition to market  
2 rates, without starting the clock that would result in full market rates by no later  
3 than ten years after an MRO is initiated. The purchases also are consistent with  
4 state policy to recognize the continuing emergence of competitive electricity  
5 markets through the development and implementation of flexible regulatory  
6 treatment.

7 Seen from a different perspective, these purchases will reflect the  
8 Companies' agreement to accept the Ormet and Monongahela Power Company  
9 loads into their service territories. The Companies believe that during the time  
10 that they will not be on the MRO track they should be able to rely to some extent  
11 on the market as a source to serve the equivalent of those new loads and can also  
12 be used as a source of supply for future economic development in the Companies'  
13 service territories. Reflecting those purchases in the FAC is consistent with the  
14 cost recovery mechanisms approved by the Commission for both the Mon Power  
15 and Ormet situations.

16 **Q. HAVE YOU READ THE TESTIMONY OF MR. ASSANTE**  
17 **CONCERNING ACCOUNTING ASSOCIATED WITH THE PHASE-IN,**  
18 **INCLUDING THE INCLUSION OF CARRYING COSTS ON THE**  
19 **DEFERRED INCREMENTAL FAC COSTS?**

20 **A. Yes, I have.**

21 **Q. IS THERE AN ALTERNATIVE APPROACH TO THE TRADITIONAL**  
22 **PHASE-IN MR. ASSANTE DISCUSSES IN HIS TESTIMONY?**

1 A. S.B. 221 refers to securitizing any phase-in, inclusive of carrying charges. It is  
2 my belief that securitization of the phase-in/carrying charges could reduce the  
3 customers' financing costs associated with a phase-in. It is my understanding that  
4 unfortunately, S.B. 221's passing reference to securitization is not adequate to  
5 actually implement securitization in the most economic way, i.e., for the debt to  
6 receive a AAA credit rating from the rating agencies. Securitization with a AAA  
7 credit rating, which has been used by other utilities, would enable the securitized  
8 debt to obtain a low interest rate for the benefit of ratepayers who would pay the  
9 interest as well as the principal. Without securitization, in order to cover  
10 financing costs, customers would have to reimburse the Companies at the  
11 Companies' weighted average cost of capital rate which is a higher rate than a  
12 AAA secured interest rate on the phase-in bonds.

13 Q. WHY DO YOU SAY THE REFERENCE IN S.B. 221 TO  
14 SECURITIZATION IS INADEQUATE?

15 A. It is my understanding that, in order to securitize the deferred unrecovered FAC  
16 costs that result from the phase-in, existing law would need to be amended to  
17 include sufficient language to provide legal assurance that the debt will be secured  
18 and, as such, qualify for a AAA credit rating. AAA rated debt is awarded the  
19 lowest interest rate available in the market. Presently S.B. 221 does not include  
20 sufficient language to support a AAA credit rating from the credit rating agencies  
21 for the securitized debt. The Companies intend to pursue the legislative changes  
22 needed to achieve securitization. If the present law is amended to make  
23 securitization feasible, the Companies will, with the Commission's approval,

1 securitize the remaining balance of the deferred unrecovered phase-in FAC costs,  
2 including to-date carrying charges and cease recovery of a weighted average  
3 capital cost based carrying cost.

4  
5 **CARRYING COSTS ON ENVIRONMENTAL INVESTMENT**

6 Q. ARE YOU AWARE THAT MR. NELSON TESTIFIES REGARDING THE  
7 RECOVERY OF CARRYING COSTS ASSOCIATED WITH  
8 ENVIRONMENTAL INVESTMENTS MADE DURING THE 2001-2008  
9 PERIOD AND TO BE MADE DURING THE 2009-2011 ESP PERIOD?

10 A. Yes I am.

11 Q. WHY ARE THE COMPANIES REQUESTING RECOVERY OF THESE  
12 COSTS?

13 A. The environmental investments previously made and still to be made are critical  
14 to the Companies' ability to keep their fleet of generating facilities in operation.  
15 Alternative energy resources, including renewable energy resources, and energy  
16 efficiency and peak demand reduction programs have an important place in the  
17 Companies' resource portfolio. However, those resources and programs will not  
18 replace the need for the existing base load generation—at least not in the  
19 foreseeable future. Therefore, the environmental investments have been, and will  
20 continue to be critical to the Companies' ability to provide service to their  
21 customers and to support the energy requirements of Ohio's economy.

22 In addition to being consistent with provisions within S.B. 221 that  
23 authorize such recovery through automatic increases, this proposal helps advance

1 the policy outlined in Section 4928.02(C) , Ohio Rev. Code, to promote diversity  
2 of electricity supplies and suppliers while also advancing the policy outlined in  
3 Section 4928.02(A), Ohio Rev. Code, to maintain reasonably priced retail electric  
4 service.

5 **Q. HAVE THE COMPANIES REQUESTED RECOVERY OF CARRYING**  
6 **COSTS ON THE ENTIRETY OF THEIR ENVIRONMENTAL**  
7 **INVESTMENTS MADE FROM 2001-2008?**

8 A. No. As explained by Mr. Nelson, the Companies are not proposing to recover  
9 carrying costs associated with a large portion of their 2001-2008 environmental  
10 investment. What is being requested is only what is not presently reflected in the  
11 Companies' existing SSO rates. This position represents another advantage of the  
12 Companies' ESP in comparison with an MRO.

13  
14 **PROVIDER OF LAST RESORT CHARGE**

15 **Q. WHAT IS THE SCOPE OF THE COMPANIES' OBLIGATION AS THE**  
16 **PROVIDER OF LAST RESORT?**

17 A. Despite the many changes to Ohio's customer choice legislation enacted in 1999  
18 (Am. Sub. S.B. No. 3 – S.B.3) that were made by S.B. 221, the fundamental  
19 premise of S.B. 3 remains. That is, all customers are free to switch to receive  
20 generation service from Competitive Retail Electric Service (CRES) providers.  
21 Further, customers can become part of a government aggregation group as another  
22 form of switching.

1           Conversely, customers also are free to continue to rely on their incumbent  
2           utility for generation service at a tariff rate. Even those customers who switch can  
3           choose to return to their incumbent utility. Further, if the CRES provider to  
4           whom customers switched or the supplier to the government aggregation group  
5           were to default in its service obligation, those customers can return to the  
6           incumbent utility.

7           This flexibility leaves the Companies in the precarious position of being  
8           exposed to losing generation service load when the market price is low but  
9           needing to stand ready to begin serving that load again when the market price is  
10          high, and in the case of a CRES or other supplier default, doing so at a moment's  
11          notice. There is a definite and significant cost associated with providing this  
12          flexibility. In addition to the challenges of providing capacity and energy on short  
13          notice, the Companies would provide service to returning customers at the SSO  
14          rate (even though they are likely to be returning because market prices exceed the  
15          SSO).

16          In addition to being consistent with provisions within S.B. 221 that  
17          authorize such charges, this proposal advances the policy outlined in Section  
18          4928.02(A), Ohio Rev. Code, to promote diversity of electricity supplies while  
19          also advancing the policy to maintain reasonably priced retail electric service.

20   **Q.   ARE THERE PROTECTIONS IN PLACE FOR THE COMPANIES TO**  
21   **LIMIT THEIR EXPOSURE TO THESE COSTS?**

22   **A.   There are some limited protections in the context of shopping rules discussed in**  
23   **the testimony of the Companies' witness Mr. Roush these are consistent with S.B.**

1 221 which continue to support customers having a true market option. There are  
2 other protections, however, that would appear to shield the Companies from some  
3 costs associated with providing the flexibility but in practice might not.

4 **Q. DO YOU HAVE AN EXAMPLE OF SUCH A PROTECTION?**

5 **A.** Yes, I have been advised by counsel that a government aggregation may elect not  
6 to receive standby service from the incumbent utility operating under an ESP. If  
7 the utility is notified of that election, it is prohibited from charging customers of  
8 the government aggregation for standby service. However, customers of that  
9 government aggregation who return to the utility for generation service will be  
10 required to pay the market price of power incurred by the utility to serve the  
11 customers (plus any amount attributable to compliance with the alternative energy  
12 resource mandates in S.B. 221). This protection, however, is not unlimited since  
13 the Commission has the authority to relieve customers of this market price  
14 exposure after two years.

15 **Q. WHY DO YOU BELIEVE THIS PROTECTION FOR THE COMPANIES**  
16 **MIGHT NOT BE EFFECTIVE?**

17 **A.** The most likely time for a supplier to a governmental aggregation to default is  
18 when market prices are at their highest levels. While charging those market  
19 prices, which in today's market condition would be in a range of \$85-90/MWh, or  
20 higher, is theoretically consistent with customer choice, I simply do not believe  
21 that the Commission and/or the General Assembly and Governor will sit back and  
22 fail to intervene while residential customers are forced into paying those rates.

1 Q. DO YOU HAVE AN EXAMPLE OF GOVERNMENT ACTION WHICH  
2 LEADS YOU TO THIS BELIEF?

3 A. Yes, S.B. 221 itself is a government action to protect customers from having to  
4 pay market prices for power beginning in 2009. The market price over a full year  
5 at on-peak and off-peak hours would be considerably lower than what the market  
6 price could be at the time of a supplier's default. The enactment of S.B. 221  
7 convinces me that utilities likely would not be permitted to charge market rates to  
8 those customers who agreed to forego standby service.

9 Q. DO YOU BELIEVE THAT CUSTOMERS WHO PAID NO STANDBY, OR  
10 POLR CHARGE STILL WOULD BE ENTITLED TO POLR SERVICE.

11 A. Yes, while I certainly cannot predict the ultimate resolution of such a situation I  
12 am quite confident that those customers will not be required to pay peak spot  
13 market prices. To me this is no different than many non-residential customers  
14 who urged the passage of S.B. 221 so they could pay rates regulated by the  
15 Commission.

16 Q. DO YOU HAVE ANOTHER EXAMPLE OF HOW IT APPEARED THAT  
17 A UTILITY NO LONGER NEEDED TO PLAN TO SERVE POWER TO A  
18 CUSTOMER BUT ONCE AGAIN WOUND UP WITH THAT SERVICE  
19 OBLIGATION?

20 A. Yes and this example is striking. Ormet used to be a customer of OPCO. When  
21 its service contract expired prior to the availability of customer choice, OPCO  
22 agreed to a modification of its service territory so that the Ormet facilities wound  
23 up in the service territory of another electric supplier. This agreement

1 accommodated Ormet's desire to purchase power in the market and OPCO no  
2 longer had to plan on serving Ormet's load which had been in the range of 500  
3 MW.

4 Several years later when market prices no longer were attractive to Ormet  
5 it filed a complaint with the Commission seeking to return to the comfort of  
6 OPCO's service territory. Recognizing the State's interest in enabling Ormet's  
7 continued existence in an economically weak portion of Ohio, OPCO, along with  
8 CSP and several of their industrial customers agreed to Ormet's return to service  
9 from OPCO and CSP, at a level of over 500 MW.

10 **Q. DO YOU THINK THIS WAS AN IMPROPER OUTCOME?**

11 A. Just focusing on the interests of CSP and OPCO and its shareholders, the outcome  
12 was far from ideal. Looking at this situation from a broader Ohio economy  
13 perspective I suppose it could be considered reasonable. My point, however, is  
14 that when viewed through the lens of the nature and extent of the Companies'  
15 POLR obligation, here we have load exceeding 500 MW that did not simply  
16 switch to another generation provider, it actually was removed from OPCO's  
17 certified service territory. Nonetheless, when push came to shove the customer  
18 and its massive load switched back to AEP Ohio. This is the ultimate nature and  
19 scope of AEP Ohio's significant POLR obligation. The obligation exists even  
20 when statutes and contracts tell you otherwise.

21 **Q. WITH THIS BACKGROUND IN MIND, HOW DID THE COMPANIES**  
22 **DEVELOP THE POLR CHARGE THEY HAVE INCLUDED?**

1 A. As I discussed previously, customers have the right to leave the utility and take  
2 service from an alternative supplier as well as the right to return to AEP's ESP  
3 pricing if future market price fluctuations make it advantageous for them to do so.  
4 AEP is holding the other side of that arrangement; AEP is obligated to stand ready  
5 to handle whatever load fluctuations may result from such switching. The  
6 financial risk inherent in such arrangements is a result of the asymmetrical  
7 relationship that exists between the two parties -- one party is holding the rights  
8 that will bring financial benefits to themselves and at the same time impose  
9 financial losses on the other party.

10 Q. WHY IS AN OPTION MODEL THE APPROPRIATE WAY TO VALUE A  
11 UTILITIES POLR OBLIGATION?

12 A. The costs of AEP's POLR obligation can be best understood in light of potentially  
13 having to buy high and sell low. Wholesale price volatility and the asymmetrical  
14 impacts of retail choice -- i.e., the customer is the party who holds the ability to  
15 choose if and when they want to take service from a competitive retail provider or  
16 under the utility's ESP plan - are the keys to understanding AEP's cost of  
17 providing its POLR obligation. The customers' option to switch providers can be  
18 demanded opportunistically, at the economic convenience of customers. In fact,  
19 Ohio's desire to create structures and incentives to encourage customer switching  
20 is one of the stated policy goals of SB 221. When determining the cost of AEP's  
21 POLR obligation, it is important to realize that in financial terms, such one-sided  
22 rights that customers receive through retail choice are equivalent to a series of  
23 options on power. When it becomes apparent that there are economic benefits

1 from switching between a competitive supplier and the ESP price, the rational  
2 customer will exercise his or her flexibility to change providers. AEP, however,  
3 will bear the difference between market and ESP prices as a loss. Thus, an option  
4 pricing model provides an effective way to calculate the cost of AEP's POLR  
5 obligation.

6 **Q. WHAT METHOD WAS USED TO PRICE THE OPTION RISK**  
7 **INVOLVED IN ITS POLR OBLIGATION?**

8 A. AEP used the Black-Scholes option pricing model to calculate the value of its  
9 POLR obligation. The Black-Scholes option pricing model is the widely used  
10 option model. Among its many applications, it is used extensively to provide  
11 basic benchmark pricing for equity and commodity options.

12 **Q. WHAT ARE THE REQUIRED QUANTITATIVE INPUTS IN THE**  
13 **BLACK-SCHOLES MODEL?**

14 A. The inputs necessary to calculate the price of an option using the Black-Scholes  
15 model are (1) the market price of the of the underlying asset, (2) the strike price,  
16 which is the price level at which the option holder has the right to buy or sell the  
17 asset, (3) the time frame that the option covers, (4) the risk free interest rate and  
18 (5) the volatility of the underlying asset.

19 The inputs used in calculating the cost of the Companies' POLR  
20 obligation and how they correspond to the defined elements of the Black-Scholes  
21 model are listed in the table below.

| <u>Black-Scholes<br/>Inputs</u>               | <u>(1) Market<br/>Price</u>                                       | <u>(2) Strike<br/>Price</u>                       | <u>(3) Time<br/>Frame</u>  | <u>(4) Interest<br/>Rate</u>                  | <u>(5) Volatility</u>   |
|---|---|---|--|---|---|
| <u>AEP Inputs<br/>into Black-<br/>Scholes</u> | The competitive benchmark prices discussed in relation to the MRO | The proposed ESP price as contained in our filing | Calendar Years 2009-2011 (the same term as our proposed ESP and the same term used to calculate our competitive benchmarks | The interest rate of the 3 year Treasury note | The volatility of the futures contract for the term 2009-2011 |

1 Q. WHERE DOES THE RISK OF THE POLR OBLIGATION COME FROM  
2 SINCE THE PROPOSED ESP RATE IS LOWER THAN THE  
3 FORECASTED FULL REQUIREMENTS PRICE?

4 A. The ESP price and the full requirements market price are only two of the variables  
5 that need to be taken into consideration. The time frame of the option – in this  
6 case the 2009-2011 time period set out in our filing– as well as the interest rate  
7 also have an impact on the cost of the POLR obligation. Even more importantly,  
8 the volatility of electricity prices plays an important role. Simply because our  
9 proposed ESP rate is currently under the market price of competitive retail electric  
10 service does not mean that there will not be periods over the next three years  
11 where those pricing lines could cross. Electricity is an extremely volatile  
12 commodity traded. This volatility no doubt is responsible for customers urging  
13 the passage of S.B. 3 so they could get access to market prices and then urging the  
14 passage of S.B. 221 so that they would be protected from market prices. The  
15 option calculation takes into account the extreme volatility of electricity prices  
16 when calculating the cost of the POLR obligation. It is also important to

1 remember that the Black-Scholes model also uses AEP's proposed ESP price and  
2 the estimation of competitive retail electric service prices as direct inputs. As a  
3 direct result of the difference between the Companies' proposed ESP rates and the  
4 much higher competitive retail electric service prices, the cost of fulfilling the  
5 Companies' POLR obligation is significantly lower than if the difference were not  
6 as large.

7 **Q. IN THE PREVIOUS EIGHT YEARS, VIRTUALLY NO CUSTOMER**  
8 **SWITCHING HAS OCCURRED IN THE COMPANIES' SERVICE**  
9 **TERRITORY. WHY DO THE COMPANIES BELIEVE A POLR**  
10 **CHARGE IS JUSTIFIED UNDER THE PROPOSED ESP?**

11 A. S.B. 221 makes clear that the promotion of retail competition, including large  
12 scale governmental aggregation, is one of the policy goals of the state. Moreover,  
13 given the volatility of electricity prices, market rates could fall below the SSO  
14 during the term of the ESP. The freedom for customers to switch suppliers while  
15 leaving the Companies obligated to provide POLR service imposes a quantifiable  
16 financial risk on the Companies. The POLR charge the Companies are requesting  
17 in this filing is a fair and reasonable approach to addressing the inherent risk  
18 associated with acting as the Provider of Last Resort.

19 **Q. HOW HAS THE POLR OBLIGATION BEEN ADDRESSED IN OTHER**  
20 **DEREGULATED STATES?**

21 A. The way in which POLR obligations are dealt with varies from state to state.  
22 Many states require customers returning to utility service to go on some type of  
23 market price – transferring the risk of switching from the utility to the customer.

1 If such an approach were used in Ohio, many have stated that the State's goal of  
2 relative price stability for customers would not be achieved.

3 **Q. HOW DOES THIS APPROACH TO HANDLING THE COMPANIES'**  
4 **POLR OBLIGATION AND ITS PROPOSED RETAIL SWITCHING**  
5 **RULES ADDRESS THE CONCERNS OF ALL STAKEHOLDERS?**

6 A. The Companies are proposing to leave in place the switching rules currently in  
7 effect. We believe the inclusion of the POLR charge in conjunction with the rules  
8 that allow for broad switching among all customers provides a fair and balanced  
9 approach. While Ohio continues to develop and encourage retail competition as  
10 outlined in S.B. 221, we believe this is the best way to provide customers the  
11 freedom to explore competitive alternatives while still providing a reasonable  
12 method of dealing with the obligation that imposes on the Companies.

13 **Q. WHY SHOULD THE POLR CHARGE BE NON-BYPASSABLE?**

14 A. All customers, even those who have switched generation suppliers, have the right  
15 to rely on the Companies for generation service. As a related matter, the fact that  
16 CRES providers do not assume the POLR obligation also helps to keep generation  
17 rates offered by CRES providers lower. Therefore, the charge must be non-  
18 bypassable.

19 **Q. BASED ON THIS ANALYSIS WHAT IS EACH COMPANY'S POLR**  
20 **REQUIREMENT?**

21 A. The POLR revenue requirements are \$108.2 million for CSP and \$60.9 million  
22 for OPCO per year. Companies' witness Mr. Roush uses these revenue  
23 requirements to develop the Companies' proposed POLR rates.

**TEST FOR SIGNIFICANTLY EXCESSIVE RETURN ON COMMON EQUITY**

**Q. WHY ARE THE COMPANIES ADDRESSING IN THIS FILING VARIOUS ISSUES CONCERNING THE DETERMINATION THE COMMISSION WILL NEED TO MAKE CONCERNING THE COMPANIES RETURN ON EQUITY FOLLOWING THE END OF EACH ANNUAL PERIOD OF THE ESP?**

**A.** I have been advised by counsel that the Commission must consider, following the end of each annual period of the ESP, if adjustments made in the ESP resulted in the return on common equity being significantly in excess of the return on common equity earned during the same period by publicly traded companies, including utilities, that face comparable business and financial risks, with adjustments for capital structure as may be appropriate. The Commission must also consider the capital requirements of future committed investments in Ohio. The Company will have the burden of proving that significantly excessive earnings did not occur.

As I review the statutory language, I see two significant uncertainties in the statutory provision. In light of the fact that the burden of proof concerning this analysis rests with the Companies, it is important to have the Commission address these uncertainties.

**Q. WHAT ARE THE TWO UNCERTAINTIES TO WHICH YOU REFER?**

**A.** One uncertainty is centered on the notion of publicly traded companies that face comparable business and financial risks. The other uncertainty is centered on the meaning of "significantly excessive." This latter point really is a two-part

1       uncertainty: how will "excessive" be defined and how will "significantly  
2       excessive" be defined?

3   **Q.   BESIDES MEETING THE BURDEN OF PROOF ARE THERE OTHER**  
4       **REASONS THAT THE COMMISSION SHOULD PROVIDE SOME**  
5       **CLARITY CONCERNING THESE UNCERTAINTIES?**

6   **A.   Yes there are. The refund potential inherent in the earnings test creates financial**  
7       **uncertainty which in turn results in financing costs that would be higher than**  
8       **otherwise. The uncertainties I have identified add further risk to the overall**  
9       **financial uncertainty risk. Therefore, the interests of the Companies and their**  
10      **customers are best served by the Commission providing clarity on these matters.**

11   **Q.   HOW HAVE THE COMPANIES APPROACHED THESE ISSUES IN**  
12      **THIS PROCEEDING?**

13   **A.   The Companies are presenting the testimony of Companies' witness Dr. Makhija.**  
14       **His testimony proposed the determination of comparable publicly traded**  
15       **companies and the application of the term "significantly excessive."**

16           I have reviewed the approach proposed and supported in Dr. Makhija's  
17       testimony and, while I recognize that the Commission needs to retain some degree  
18       of judgment in how those concepts are applied, I believe his methodology should  
19       be endorsed by the Commission as the starting point for its earnings analysis.

20   **Q.   IN YOUR OWN ANALYSIS OF THE SIGNIFICANTLY EXCESSIVE**  
21       **EARNINGS TEST REQUIREMENT, WHAT CONCLUSIONS HAVE YOU**  
22       **REACHED CONCERNING THE BUSINESS RISK FACING THE**  
23       **COMPANIES?**

1 A. As I think about the business risk facing the Companies under S.B. 221 I  
2 categorize those risks in five categories. These are migration risk, asset risk,  
3 financial risk, transition to market risk and litigation risk. Attached to my  
4 testimony as EXHIBIT JCB-1 is a list of risks that I see as falling within each of  
5 these categories. Based on my forty years of experience in the utility industry and  
6 my general familiarity with many other industries, I am unaware of other  
7 industries that can be said to have comparable business and financial risks as the  
8 Companies do.

9 **Q. ARE THERE OTHER ASPECTS OF THE SIGNIFICANTLY EXCESSIVE**  
10 **EARNINGS TEST THAT YOU BELIEVE THE COMMISSION SHOULD**  
11 **CLARIFY PRESENTLY AS OPPOSED TO WAITING UNTIL IT**  
12 **ACTUALLY APPLIES THE TEST?**

13 A. Yes. I think it will be necessary to adjust the Companies' returns on equity for  
14 two factors. The first factor is mentioned in the testimony of Companies' witness  
15 Mr. Assante. As he points out, the phase-in deferrals would result in earnings as  
16 if there had been no phase-in.

17 While the return on equity may be the same under a phase-in or no phase-  
18 in scenario, the reality of the situation is that customers will not have paid rates  
19 that reflect the amounts of the deferrals. Therefore, it would be inappropriate to  
20 base a finding of a significantly excessive return on equity or revenues that the  
21 Companies had not received and worse-yet, to order the Companies to return  
22 these "revenues" to customers even though the customers had not even made  
23 those payments. My further concern with ordering a refund of recoveries which

1 had not actually been paid is the concern raised by Mr. Assante regarding the  
2 inability to offer a phase-in because the deferral requirement of probability of  
3 recovery will be severely jeopardized. So that we and our auditors can determine  
4 whether a phase-in is achievable, the Commission needs to address this issue.

5 Similarly, although not related to the proposed phase-in, the Commission  
6 needs to address the treatment of the off-system sales on the Companies' return  
7 on equity.

8 **Q. WHAT IS MEANT BY OFF-SYSTEM SALES?**

9 A. Off-system sales are opportunity wholesale sales by the AEP system. The sales  
10 are made pursuant to rates approved by the Federal Energy Regulatory  
11 Commission under its exclusive jurisdiction. The margins from these sales are  
12 allocated to the AEP operating Companies, including CSP and OPCO. The AEP  
13 system does not plan its generating facilities based on anticipated off-system  
14 sales. Instead, generating facilities are planned to meet current and anticipated  
15 firm loads. To the extent capacity is available and a demand for that capacity  
16 exists on the wholesale market, the opportunity is pursued and hopefully an  
17 opportunity sale, or off-system sale, is made.

18 **Q. WHAT IS YOUR RECOMMENDATION REGARDING THE**  
19 **TREATMENT OF OFF-SYSTEM SALES IN THE CONTEXT OF THE**  
20 **EARNINGS TEST?**

21 A. With this background, I have been advised by counsel that it would be unlawful  
22 for the Commission to order a refund based on earnings influenced, in part, by  
23 recoveries received through FERC-jurisdictional rates. Even without this legal

1 issue, I believe it would be inappropriate to order a refund based on a return on  
2 equity which results, in part, from these off-system sales. The entire focus of S.B.  
3 221 is on retail sales. Indeed, to the extent that earnings result from sources other  
4 than adjustments in the ESP, I believe that it would be inappropriate to consider  
5 such earnings as excessive. The return on equity test must be reviewed in this  
6 context, and the Commission should make clear in this ESP order that it will  
7 exclude the impact of off-system sales from any application of the test.

8 **Q. ARE THERE OTHER ADJUSTMENTS THAT MIGHT NEED TO BE**  
9 **MADE BY THE COMMISSION AS PART OF THE EARNINGS TEST?**

10 A. Yes, at least one other adjustment might need to be made in the context of  
11 OPCO's eventual resolution of the JMG lease issue. Depending on how that  
12 matter is resolved there may need to be an adjustment. OPCO would, as part of  
13 any JMG lease filing, address the treatment of any such adjustment.

14 **Q. DO YOU HAVE ANY OTHER MATTERS RELATED TO THE**  
15 **EARNINGS TEST THAT THE COMMISSION SHOULD RESOLVE AT**  
16 **THIS TIME?**

17 A. Yes. I recommend that the earnings test be performed on the two Companies on a  
18 combined basis. These two Companies are operated as a single entity, with a  
19 single management structure. Their participation in economic development  
20 efforts is based on a combined basis instead of as two companies competing  
21 against one another. Reviewing earnings on a separate company basis puts form  
22 over substance and would result in a penalizing one company or not penalizing

1 the other company for decisions made based on the overall perspective of AEP  
2 Ohio.

3  
4 **MODIFICATION OF CORPORATE SEPARATION PLAN AND AUTHORITY**  
5 **TO SELL OR TRANSFER CERTAIN GENERATING ASSETS**

6 Q. WHAT IS THE STATUS OF THE COMPANIES' CORPORATE  
7 SEPARATION PLAN?

8 A. In their electric transition plan proceedings each Company was authorized to  
9 legally separate its distribution, transmission and generation functions. In their  
10 RSP proceeding, however, the Commission modified the previously approved  
11 corporate separation plans. In particular, the Commission authorized the  
12 Companies to operate on a functional separation basis. (RSP Opinion and Order,  
13 p. 35).

14 Q. WHAT ARE THE COMPANIES PROPOSING IN THIS PROCEEDING  
15 REGARDING CORPORATE SEPARATION?

16 A. The Companies are proposing that the Commission authorize the Companies to  
17 remain functionally separated and authorize a plan to retain the distribution and,  
18 for now, the transmission assets and to eventually move their generating assets to  
19 a to-be-formed affiliate company. The Commission's authorization of such a  
20 request would be the first of several steps that would need to be taken before  
21 actual transfer could be completed. Of course, one important step in that process  
22 would be to obtain Commission authority to actually sell or transfer the  
23 generating assets.

1 **Q. WHY DO THE COMPANIES REQUEST THIS AUTHORITY?**

2 A. I have been advised by counsel that functional separation can only be permitted  
3 for an interim period. Counsel also has advised me that the underlying  
4 requirement remains for corporate separation of the provision of competitive retail  
5 electric service from the provision of noncompetitive retail electric service.  
6 While the length of the "interim period" for which functional separation is  
7 permitted is not defined, it is not contemplated as a permanent solution.  
8 Therefore, ultimately, and in my opinion probably sooner rather than later, legal  
9 separation must be achieved. We believe the three-year ESP accommodates a  
10 reasonable extension period of functional separation. However, eventually legal  
11 separation will be required and all parties should understand how the Companies  
12 would implement their corporate separation

13 **Q. WHEN THE COMPANIES EVENTUALLY ARE AUTHORIZED TO**  
14 **LEGALLY SEPARATE THEIR DISTRIBUTION, TRANSMISSION AND**  
15 **GENERATION ASSETS WOULD THEY BE ABLE TO AVOID THE**  
16 **STATUTORY PHASE-IN REQUIREMENT IN THE CONTEXT OF A**  
17 **FUTURE MRO?**

18 A. No. As of the effective date of S.B. 221 both Companies directly own operating  
19 electric generating facilities that had been used and useful in Ohio. Counsel has  
20 advised me that therefore, §4928.142 (D) Ohio Rev. Code, will require that when  
21 in the future, the Companies seek authority to establish the Standard Service Offer  
22 under an MRO only a portion of the SSO for the first five years of the MRO can  
23 be competitively bid. Therefore, as I understand it, when the Companies apply

1 for an MRO to determine their SSO, even if the Companies' modification to their  
2 corporate separation plan had been previously granted their rates would not be  
3 based on one hundred percent market at that time.

4 **Q. DOES CSP OWN ANY GENERATING ASSETS WHICH HAVE NOT**  
5 **BEEN DECLARED USED AND USEFUL IN OHIO?**

6 A. Yes, it owns two such facilities. On September 28, 2005, CSP purchased the  
7 Waterford Energy Center located in southeastern Ohio. The Waterford generating  
8 facility is a natural gas combined cycle power plant. It has a nominal generating  
9 capacity of 821 MW. On April 25, 2007, CSP completed the purchase of the  
10 Darby Electric Generating Station. The Darby plant, located near Mount Sterling,  
11 Ohio, is a natural gas simple cycle generating facility with a nominal generating  
12 capacity of 480 MW and a summer capacity of approximately 450 MW.

13 **Q. IRRESPECTIVE OF CSP'S CORPORATE SEPARATION PLAN YOU**  
14 **HAVE DISCUSSED, WHAT IS CSP'S REQUEST CONCERNING THESE**  
15 **TWO FACILITIES?**

16 A. CSP requests authority to sell or transfer these two plants. However, CSP has no  
17 present plan to exercise that authority. Neither of these units have ever been in  
18 CSP's rate base and customers' generation rates have not reflected CSP's  
19 investment in the plants or the expenses of operating and maintaining the plants.

20 The amendment to §4928.17 (E), Ohio Rev. Code, concerning the sale or  
21 transfer of generating assets could not have been more of a reversal of state law.  
22 Up to July 30, 2008, a utility could divest generating assets without Commission  
23 approval. As of July 31, 2008, prior Commission approval of such a sale or

1 transfer is required. Many argued during the legislative debates over S.B. 221  
2 that this represents an appropriate change in public policy with respect to  
3 generating assets that had been the basis for rates that customers have been  
4 paying, i.e., used and useful for rate base purposes. While I do not agree with  
5 these arguments that same argument cannot be made regarding the Darby and  
6 Waterford facilities. Therefore, I believe it is appropriate for the Commission to  
7 grant CSP, as part of the ESP, the authority to sell or transfer those generating  
8 assets.

9 **Q. IF PRIOR TO JULY 31, 2008, CSP COULD HAVE SOLD THOSE**  
10 **PLANTS WITHOUT HAVING TO OBTAIN COMMISSION AUTHORITY**  
11 **WHY DID IT NOT DO SO?**

12 **A.** There are two parts to the answer to that question – a practical part and a  
13 philosophical part. As a practical matter transactions of this nature do not happen  
14 over night. It is not clear to me that the transaction could be completed in time.  
15 More important, however, is the philosophical part. The implementation of S.B.  
16 221 should occur in a fair and responsible manner. Since rushing to sell these  
17 plants might be perceived by some as trying to avoid the General Assembly's  
18 intent in this regard, we chose to bring this issue before the Commission.

19 **Q. DO CSP AND/OR OPCO HAVE GENERATION ENTITLEMENTS**  
20 **RESULTING FROM ARRANGEMENTS OTHER THAN THE WHOLE**  
21 **OR PARTIAL OWNERSHIP OF GENERATING ASSETS?**

22 **A.** Yes they do. On May 16, 2007 AEP Generating Company, an affiliate of CSP  
23 purchased the Lawrenceburg Generation Station located in Lawrenceburg,

1 Indiana. The Lawrenceburg plant is a combined-cycle natural gas power plant  
2 with a generating capacity of 1,096 MW. CSP has a contract for the output of the  
3 Lawrenceburg plant.

4 In addition, CSP and OPCO each have a contractual entitlement to a  
5 portion of the output from the generating facilities of the Ohio Valley Electric  
6 Corporation (OVEC). Those facilities are the Kyger Creek plant owned by  
7 OVEC and Clifty Creek plants owned by OVEC's subsidiary, Indiana-Kentucky  
8 Electric Corporation. These entitlements have not been reflected in rate base for  
9 either Company.

10 **Q. PLEASE DESCRIBE CSP'S AND OPCO'S RELATIONSHIP WITH**  
11 **OVEC.**

12 **A.** OVEC was formed in 1952 by several regional utilities to provide power to a  
13 uranium enrichment plant near Portsmouth, Ohio. AEP is one of the owners and  
14 CSP, which was not part of the AEP system in 1952, is another of the owners.  
15 OVEC and the Atomic Energy Commission (AEC) executed a power agreement  
16 which ultimately was terminated on April 30, 2003.

17 The OVEC "Sponsoring Companies", which include CSP, a part owner of  
18 OVEC, and OPCO, through AEP's part ownership of OVEC, signed an Inter-  
19 Company Power Agreement (ICPA) which provides for excess energy sales to the  
20 Sponsoring Companies of power not utilized by the AEC (subsequently the  
21 Department of Energy, DOE). Only after the 2003 termination of the OVEC-  
22 AEC/DOE agreement, OVEC's entire generating capacity has been available to  
23 the Sponsoring Companies. The term of the ICPA has been extended to March

1 13, 2026. The combined capacity of the Kyger Creek and Clifty Creek plant is  
2 2,390 MW. CSP's and OPCo's shares as Sponsoring Companies are 4.44 percent  
3 and 15.49 percent, respectively.

4 **Q. DO CSP AND OPCO BELIEVE THAT THEY NEED COMMISSION**  
5 **AUTHORIZATION TO SELL OR TRANSFER THE OVEC AND CSP**  
6 **LAWRENCEBURG, ENTITLEMENTS?**

7 A. I have been advised by counsel that since these entitlements are contractual in  
8 nature and do not arise from generating assets that either Company wholly or  
9 partly owns, Commission approval for such transactions is not required.

10 **Q. WHY ARE YOU TESTIFYING ABOUT THE LAWRENCEBURG AND**  
11 **OVEC TRANSACTIONS?**

12 A. The focus of S.B. 221 on generation-related transactions indicates an interest in  
13 the sale or transfer of generating assets wholly or partly owned by an electric  
14 distribution utility. Though Commission approval of the intended transactions I  
15 have just described is not required, and I am not aware of any requirements to  
16 inform the Commission of these transactions, I believe it would be inappropriate  
17 to discuss matters that are jurisdictional, i.e. the Darby and Waterford plants, and  
18 not give a complete picture regarding plants that have not previously been deemed  
19 used and useful by the Commission.

20  
21 **AMORTIZATION OF MISCELLANEOUS DEFERRED COSTS**

22 **Q. ARE THE COMPANIES PROPOSING TO BEGIN THE AMORTIZATION**  
23 **OF MISCELLANEOUS DEFERRED COSTS**

1 A. Yes. The proposal is to begin that amortization in 2011 and complete the  
2 amortization approximately eight years later.

3 **Q. WHAT IS THE RATIONALE FOR THE TIME PERIODS?**

4 A. As Mr. Assante notes in his testimony, a significant portion of these deferrals  
5 have been on the Companies' books since the Market Development Period. With  
6 the passage of S.B. 221, and the filing of an ESP which makes adjustments to  
7 distribution rates, it is appropriate to address at this time the amortization of these  
8 deferrals. The Companies believe that with other ESP rate increases it would be  
9 in the interest of customers to put off the commencement of the amortization. To  
10 further moderate the rate impact on customers, the Companies propose to  
11 amortize the deferrals over approximately eight years, starting in 2011. Mr.  
12 Roush testifies in support of a rider that will recover these deferrals along with  
13 carrying charges on the unrecovered balance of the deferrals.

14

15 **ECONOMIC GROWTH ADJUSTMENTS TO BASELINES FOR ENERGY**  
16 **EFFICIENCY AND PEAK DEMAND REDUCTIONS**

17 **Q. WHY ARE THE COMPANIES ADDRESSING IN THIS FILING THE**  
18 **BASELINES FOR THE ENERGY EFFICIENCY AND PEAK DEMAND**  
19 **REDUCTIONS MANDATED BY S.B.221?**

20 A. Since the Companies' obligations regarding energy efficiency and peak demand  
21 reduction begin in 2009 it is important for us to know how the baselines will be  
22 determined. While the precise level of the baselines cannot be determined until  
23 the Companies' total kilowatt hours sold in 2008 are known, we can establish for

1 2009 and thereafter the "rules of the road" for making adjustments to the  
2 preceding three year's average kilowatt hours sold.

3 **Q. WHAT ADJUSTMENTS TO THE BASELINES ARE THE COMPANIES**  
4 **PROPOSING?**

5 **A.** I have been advised by counsel that the Commission has the authority to reduce  
6 these baselines to adjust for new economic growth in the utility's certified  
7 territory. The term "economic growth" if broadly interpreted could include all  
8 new load added during the three-year baseline period.

9 **Q. WHAT ECONOMIC GROWTH ADJUSTMENTS ARE THE COMPANIES**  
10 **PROPOSING FOR THE BASELINE YEARS 2006-2008?**

11 **A.** There are four categories of economic growth that the Companies are proposing.  
12 The first category relates to the Commission's January 26, 2005 Opinion and  
13 Order in the Companies RSP proceeding. One of the results of that order was that  
14 the Commission concluded that "\$14 million should be allotted by [the  
15 Companies] for the benefit of [their] low-income customers, as well as for  
16 economic development during the RSP period." (p 34). As directed by the  
17 Commission, the Companies worked with the Commission's Staff to develop the  
18 use of that money. The Staff in turn, was directed to work with the Department  
19 of Development in relation to the use of the money. It is the Companies' position  
20 that to the extent the \$14 million was used for economic development purposes  
21 which resulted in increased load, that load should be removed from the average  
22 three-year baselines.

1 Q. WHAT IS THE SECOND CATEGORY OF ECONOMIC GROWTH-  
2 RELATED LOAD THAT SHOULD BE REMOVED FROM THE  
3 CALCULATION OF THE BASELINES?

4 A. The second category relates to the load acquired by CSP when it absorbed the  
5 service territory formerly served by Monongahela Power Company (Mon Power).  
6 The record in that proceeding (Case No. 05-765-EL-UNC) reflects the  
7 Commission's concerns for Mon Power's customers if they were not served under  
8 an RSP. The Commission stated that "Mon Power's retail customers may be  
9 facing potential rate shock and rate instability.... The Commission remains  
10 resolute that the RSP option is the best option for Ohio's electric customers...."  
11 (June 14, 2005 Entry, p.1).

12 The Staff also testified that CSP's assumption of the responsibility of  
13 providing a Standard Service Offer to the former Mon Power customers.... is "not  
14 normal load growth within the CSP service territory .... and was "in response to a  
15 request by the Commission as a matter of public policy...."

16 The Staff's witness Mr. Cahaan also testified:

17 There are important economic development issues.  
18 Certainly, a major reason for promoting a rate stabilization  
19 plan in the former Mon Power service territory was related  
20 to concerns of economic dislocation. It is also clear that  
21 neighboring locations in Ohio have strong economic ties  
22 and are strongly linked. In general prosperity in one area  
23 spills over into other areas, boosting their economic health.  
24 Conversely, dislocation and economic decline in an area  
25 spill over to neighboring areas. The benefits of providing a  
26 rate stabilization plan to the southeastern corner of the State  
27 will provide benefits to the rest of the CSP service territory  
28 as well. (*Id.* at 4)

1 In its post-hearing brief the Staff argued that if CSP did not absorb Mon Power's  
2 service territory, prices would leap to a level that "almost certainly will drive out  
3 major employers from a region which already has very few. This is a crushing  
4 blow to a region which has weathered many, too many, in recent years." (Brief,  
5 pp 1,2).

6 Finally, in its November 9, 2005 Opinion and Order in that proceeding the  
7 Commission held that with the service territory transfer "economic benefits will  
8 insure to all citizens and businesses in both regions by helping to sustain  
9 economic development in southeastern Ohio." (Opinion and Order, p.11)

10 Given this record it is clear that CSP's acquisition of the former Mon  
11 Power service territory served the interest of economic development in Ohio and  
12 resulted in new economic growth in CSP's certified service territory.

13 **Q. WHAT IS THE THIRD CATEGORY OF ECONOMIC GROWTH-**  
14 **RELATED LOAD THAT SHOULD BE REMOVED FROM THE**  
15 **CALCULATION OF THE BASELINE?**

16 **A.** The third category relates to the Ormet load being served by CSP and OPCO. As  
17 discussed elsewhere, as a result of a complaint filed by Ormet against it's then-  
18 current electric supplier and OPCO (Case No. 05-1057-EL-CSS), as of January 1,  
19 2007 Ormet became a customer of a new CSP/OPCO combined service territory.

20 In the Commission's November 8, 2006 Supplemental Opinion and Order  
21 the Commission reviewed the extensive economic benefits resulting from the  
22 transfer of service responsibility to CSP and OPCO. These benefits included the  
23 employment of about 1,000 people with annual wages of \$40,000,000 and

1 healthcare benefits costing over \$10,000,000 per year. Further, Ormet pays about  
2 \$1,000,000 annually in taxes to Monroe County, Ohio and its school district.

3 "These extensive economic benefits can only be obtained through the  
4 resumption of operations at [Ormet's] Hannibal Facilities, and the Stipulation will  
5 facilitate the resumption of those operations." (p.7).

6 Based on the record in that case it is clear that CSP's and OPCO's service  
7 to Ormet resulted in economic growth in their certified territory.

8 **Q. IS THERE ANY ADDITIONAL GROWTH-RELATED LOAD THE**  
9 **COMPANIES ARE SERVING THROUGH THEIR JOINT SERVICE**  
10 **TERRITORY?**

11 **A.** Yes. In its November 7, 2007, Finding and Order in Case No. 07-360-EL-AEC  
12 the Commission approved a service contract between the Companies and  
13 Hannibal Real Estate LLC. (Hannibal). Hannibal is a steel plate storage and  
14 distribution company which, prior to obtaining Ormet's former rolling mill  
15 facility, which had been idle since 2005, had been located in White Plains, New  
16 York. Hannibal estimated its reopening the rolling mill facility will result in 20-  
17 30 jobs with very competitive wages.

18 This special contract has brought additional economic growth benefits to  
19 Monroe County and the load of Hannibal should be removed from the three-year  
20 baseline calculation.

21 **Q. LOOKING BEYOND THE BASELINE FOR 2009, DO THE COMPANIES**  
22 **ANTICIPATE ANY OTHER ECONOMIC GROWTH-RELATED LOAD**  
23 **ADJUSTMENTS TO THE APPLICABLE BASELINES?**

1 A. Yes. Besides the continuation of adjustments for the loads I have discussed, the  
2 Companies are mindful of the likelihood of future load growth due to economic  
3 growth tied to the economic development efforts of the Companies, and state and  
4 local agencies with responsibility for economic development. These economic  
5 development efforts are important to the state as a whole and to the communities  
6 we serve. Failing to adjust the baselines for such load will result in a disincentive  
7 to promote economic growth. This is because the larger the baselines the greater  
8 the amount of energy efficiency and peak demand reduction which must be  
9 achieved in order to avoid the imposition of non-compliance forfeitures.  
10 Therefore, we ask the Commission to declare that load resulting from the  
11 Companies' and/or state and local agencies with responsibility for economic  
12 development will be excluded from the baseline calculations.

13  
14 **POSSIBLE EARLY PLANT CLOSURE**

15 **Q. WHY ARE THE COMPANIES ADDRESSING IN THIS FILING THE**  
16 **ACCOUNTING FOR POSSIBLE EARLY PLANT CLOSURE?**

17 A. Some of the Companies' units could experience failures or safety issues that  
18 would require significant investment to keep them operating. As long as it is  
19 economical and safe to do so, the Companies intend to keep their units running as  
20 long as possible. However, considering the number of units the Companies' own  
21 it is possible that one or more of their units may experience a failure or safety  
22 issue requiring a significant investment that would not be cost effective to make.  
23 It is possible, therefore, that the date at which one of these units is no longer able

1 to cost-effectively operate could be a date earlier than assumed for depreciation  
2 accrual purposes. Mr. Assante discusses in his testimony how the Companies  
3 propose to account for and recover the cost for such an event.

4  
5 **INTEGRATED GASIFICATION COMBINED CYCLE GENERATING**  
6 **FACILITY**

7 **Q. PLEASE DESCRIBE THE BACKGROUND OF THE COMPANIES'**  
8 **EFFORTS TO CONSTRUCT AN INTEGRATED GASIFICATION**  
9 **COMBINED CYCLE (IGCC) GENERATING FACILITY IN MEIGS**  
10 **COUNTY, OHIO.**

11 **A. In its January 26, 2005, Opinion Order in Case No. 04-169-EL-UNC, the**  
12 **Companies' Rate Stabilization Plan (RSP) proceeding, the Commission urged the**  
13 **Companies:**

14 "to move forward with a plan to construct an  
15 [IGCC] facility in Ohio." [The Companies] should  
16 engage the Ohio Power Siting Board in pursuit of  
17 such a plant. We are encouraged by emerging  
18 information that suggests that the IGCC technology  
19 will be economically attractive. It is worth noting  
20 that the Commission is exploring regulatory  
21 mechanisms by which utilities, given their POLR  
22 responsibilities, might recover the costs of these  
23 new facilities." (pp. 37-38).

24 The Commission explained its interest in IGCC technology in the context  
25 of the Companies' statutory POLR responsibilities, the Commission's  
26 responsibility to enhance the business climate in Ohio, Ohio's express statutory  
27 policy that consumers are entitled to a future secure in the knowledge that  
28 electricity will be available at competitive prices, and the Commission's opinion

1 that electric generators of the future should be both environmentally friendly and  
2 capable of taking advantage of Ohio's vast fuel resources.

3 **Q. DID THE COMPANIES SHARE THE COMMISSION'S INTEREST IN**  
4 **IGCC TECHNOLOGY?**

5 **A.** Absolutely, and we continue to be interested in building and operating an IGCC  
6 facility in Meigs County, Ohio.

7 **Q. HOW DID THE COMPANIES PROCEED IN RESPONSE TO THAT**  
8 **PORTION OF THE RSP ORDER?**

9 **A.** On March 18, 2005 the Companies filed an application for authority to recover  
10 costs associated with the construction and operation of an IGCC facility. That  
11 application was docketed as Case No. 05-376-EL-UNC. In that application the  
12 Companies requested authority to implement a three-phase mechanism for  
13 recovering their IGCC costs. As the Companies' then - President testified at that  
14 time, however, the Companies would not continue on the IGCC construction path  
15 if cost recovery were subject to uncertainty. In addition, the Companies obtained  
16 a certificate from the Ohio Power Siting Board to construct the proposed IGCC  
17 plant. (OPSB Case No. 06-30-EL-BGN).

18 **Q. HOW DID THE COMMISSION RULE IN THE IGCC CASE?**

19 **A.** In its April 10, 2006 Opinion and Order the Commission approved Phase I  
20 recovery of approximately \$24 million of pre-construction costs. In the  
21 Commission's June 28, 2006 Entry on Rehearing, the Commission, based on its  
22 belief "that there may be elements of the design and engineering that may be  
23 transferable to other projects" (p. 16), ordered that if the Companies have not

1 "commenced a continuous course of construction of  
2 the proposed facility within five years of the date of  
3 issuance of this entry on rehearing, all Phase I  
4 charges collected for expenditures associated with  
5 items that may be utilized at other sites, must be  
6 refunded to Ohio ratepayers with interest." (p.17).

7 **Q. WERE THE COMMISSION'S IGCC ORDERS APPEALED?**

8 **A.** Yes, they were.

9 **Q. WHAT WAS THE OUTCOME OF THE APPEAL?**

10 **A.** I will not attempt to explain the Ohio Supreme Court's rationale. I note, however,  
11 that the Court reversed in part and affirmed in part the Commission's orders and  
12 remanded the proceeding back to the Commission. The Court's opinion, of  
13 course, was based on the law as it existed prior to the enactment of S.B. 221.

14 **Q. DOES THE ENACTMENT OF S.B. 221 PROVIDE LEGAL AUTHORITY**  
15 **FOR THE COMMISSION TO APPROVE THE COMPANIES' THREE-**  
16 **PHASE COST RECOVERY PROPOSAL FOR IGCC COST RECOVERY?**

17 **A.** That is a question the Commission, and then perhaps the Ohio Supreme Court  
18 would need to answer. I can say, however, that from the Companies' perspective  
19 there are several provisions in S.B. 221 which appear to create barriers to the  
20 construction of the IGCC facility in Meigs County.

21 **Q. CAN YOU IDENTIFY ANY EXAMPLES OF THOSE PROVISIONS?**

22 **A.** Yes. While S.B. 221 does address construction work in progress (CWIP) and  
23 surcharges for the life of an electric generating facility owned by the electric  
24 distribution utility, those are mentioned only in the context of an ESP. An IGCC  
25 facility will be a long-lived asset. The structure of S.B.221 may require the  
26 electric distribution utility to remain in an ESP for decades to assure an

1 opportunity for IGCC cost recovery. Foregoing the MRO alternative on such a  
2 long-term basis is a very steep price to pay for what we believe is a sensible  
3 component of meeting our POLR obligation and meeting what appear to be ever-  
4 increasing environmental restrictions.

5 Another example of a barrier is the CWIP provision itself. Ohio's CWIP  
6 provision has several restrictions that tend to minimize the benefits of CWIP.  
7 S.B. 221 does not appear to overcome these restrictions. These include the  
8 seventy-five percent complete requirement, the limit on CWIP as a percentage of  
9 total rate base and the effect of so-called "mirror CWIP." The limit on CWIP as a  
10 percentage of total rate base causes particular uncertainties since the concept of a  
11 generation rate base has no applicability under S.B. 221.

12 **Q. DO THE COMPANIES INTEND TO ABANDON THEIR INTEREST IN**  
13 **CONSTRUCTING AND OPERATING AN IGCC FACILITY IN MEIGS**  
14 **COUNTY?**

15 **A.** Definitely not. The Companies, our customers, Ohio's coal industry and the State  
16 of Ohio cannot afford to give up on this project. The examples I just mentioned  
17 are not unique to IGCC technology. They are real barriers to the construction of  
18 any base load generation in Ohio. We are encouraged that while the General  
19 Assembly addressed renewables and energy efficiency in S.B.221, it also  
20 recognized the need for advanced energy resources, including clean coal  
21 technology, such as IGCC, with design capability to control or prevent the  
22 emission of carbon dioxide. It is our hope that we can work with the Governor's  
23 administration, the General Assembly and any other party that has a genuine

1 interest in securing Ohio's energy future in a responsible and realistic manner to  
2 enact legislation that will make an IGCC facility in Meigs County, Ohio a reality.  
3 I must note, however, that since we originally proposed our IGCC construction  
4 plans, CSP has acquired additional generating capacity. This additional capacity  
5 will impact the timing for an IGCC plant addition.  
6

7 **JMG/OPCO GAVIN SCRUBBER LEASE ACCOUNTING**

8 **Q. PLEASE DESCRIBE THE BACKGROUND CONCERNING OPCO'S**  
9 **LEASE WITH JMG FUNDING, LP (JMG) PERTAINING TO SOLID**  
10 **WASTE DISPOSAL FACILITIES (SCRUBBERS) AT THE GAVIN**  
11 **PLANT.**

12 **A.** In Case No. 93-793-EL-AIS, the Commission authorized OPCO to enter into a  
13 lease with a third party, JMG Funding. The lease provides for the purchase of the  
14 Gavin scrubbers at the end of its initial fifteen-year lease term at the higher of the  
15 scrubbers' net book value or its market value to be based on a mutually agreeable  
16 appraisal. The lease also has an option to renew the term for an additional  
17 nineteen years from 2010 to 2029.

18 **Q. PLEASE DESCRIBE THE NATURE OF THE APPLICATION FILED BY**  
19 **OPCO IN CASE NO. 08-498-EL-AIS.**

20 **A.** In that application OPCO sought authority to assume obligations of JMG under  
21 loan agreements, to refinance certain obligations related to those loan agreements,  
22 to enter into loan agreements in connection with the refinancing, to enter into  
23 guarantees and to enter into interest rate management agreements.

1 Q. HAS THE COMMISSION COMPLETED ITS CONSIDERATION OF THE  
2 APPLICATION?

3 A. Yes it has. In its June 4, 2008 Finding and Order in that docket the Commission  
4 approved the application, subject to two conditions.

5 Q. WHAT ARE THOSE CONDITIONS?

6 A. First, OPCO was ordered to seek Commission approval prior to exercising the  
7 option to purchase the leased facilities and/or terminate the lease in 2010 or renew  
8 the lease. Second, Ohio Power Company was ordered to provide details of how it  
9 intends to incorporate the lease in its ESP.

10 Q. HAS OPCO DETERMINED WHETHER IT WOULD RENEW THE  
11 LEASE FOR THE NINETEEN-YEAR PERIOD OR BUY THE  
12 SCRUBBERS AT THE HIGHER OF THEIR REMAINING NET BOOK  
13 VALUE OR MARKET?

14 A. No, it has not since it does not know the scrubbers' market value at this time. An  
15 analysis to determine the least cost option cannot be completed without an  
16 appraisal being performed and discussions with the lessor completed to agree on  
17 the scrubbers' market value. Since the initial fifteen-year lease term does not end  
18 until 2010, OPCO has not yet completed the necessary discussions with the lessor  
19 to engage an appraiser and agree on a market value after receiving the appraisers  
20 report. Until the market value of the scrubbers at the termination date can be  
21 determined and agreed to it is not possible to determine which option is the least  
22 cost option. Therefore, OPCO reserves the right to seek an appropriate

1       modification to its ESP rates, in 2010 or whenever the determination is made, to  
2       recover any increased costs, as appropriate.

3   **Q.   DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?**

4   **A.   Yes, it does.**

Migration Risk

- Customers have come and go rights (rules to be determined) – Company retains provider of last resort status at tariff rates
- Distributed generation is encouraged
- Governmental aggregation is promoted – including by-passability of charges
- Governmental agencies to pursue energy price risk management
- Competition from other EDUs that own generation

Asset Risk

- No future stranded cost recovery for historical “g” assets
- Performance standards and targets for service quality to customers
- Requirement to have T&D available for customer generation and distributed generation
- Risk that Commission requires separation from RTO participation (infrastructure investment associated with membership)
- Mandated compliance for advanced energy portfolio forces utilities to pursue/investment in technologies that may not perform as expected in introducing technical risk
- By-passability of advanced energy costs through shopping

Financial Risk

- A symmetrical earnings test – set rates and claw back on one side – no true up on the other
- Prudency review of generation-related costs
- Penalties for under compliance with advanced energy/DSM/EE (potentially in excess of \$200 million/year)
- Commission can require phase-in of rates to ensure rate and price stability
- Lack of definition around earnings test-present and future

Transition to Market Risk

- Commission can stall the Market Rate Option (MRO) at 10% phase in after the first year – no ability to return to ESP
- Approved ESP can later be rejected before end of term if MRO provided better economics for customers

Litigation Risk

- Political uncertainty of implementation of new law presently and in the future as new deal structures and technologies emerge – or changing it in the future
- It may well be years before all of the provisions of the bill are resolved through court activity

OF J. CRAIG BAKER (December 10,  
2008), Case Nos. 08-917-EL-SSO and 08-  
918-EL-SSO**

## BEFORE THE PUBLIC UTILITIES COMMISSION OF OHIO

In the Matter of the :  
Application of Columbus :  
Southern Power Company for:  
Approval of its Electric :  
Security Plan; an : Case No. 08-917-EL-SSO  
Amendment to its Corporate:  
Separation Plan; and the :  
Sale or Transfer of :  
Certain Generating Assets.:

In the Matter of the :  
Application of Ohio Power :  
Company for Approval of :  
its Electric Security : Case No. 08-918-EL-SSO  
Plan; and an Amendment to :  
its Corporate Separation :  
Plan.

## PROCEEDINGS

before Ms. Kimberly W. Bojko and Ms. Greta See,  
Hearing Examiners, at the Public Utilities Commission  
of Ohio, 180 East Broad Street, Room 11-C, Columbus,  
Ohio, called at 9:00 a.m. on Wednesday, December 10,  
2008.

## VOLUME XIV

2 (Pages 5 to 8)

Page 125

1 and we would like to mark that as 2F so that there  
2 will be a readable copy of that in the record.

3 EXAMINER BOJKO: It will be so marked as  
4 Companies' Exhibit 2F.

5 (EXHIBIT MARKED FOR IDENTIFICATION.)

6 MR. RESNIK: Thank you very much.

7 ---

8 J. CRAIG BAKER

9 being previously sworn, as prescribed by law, was  
10 examined and testified as follows:

11 DIRECT EXAMINATION

12 By Mr. Resnik:

13 Q. Please state your name.

14 A. My name is J. Craig Baker.

15 Q. Mr. Baker, do you have before you a copy  
16 of what has been marked as Companies' Exhibit 2E?

17 A. Yes, I do.

18 Q. Could you identify that document, that  
19 exhibit for us, please?

20 A. That is additional rebuttal testimony in  
21 this case.

22 Q. And do you have before you a copy of  
23 what's been marked as Companies' Exhibit 2F?

24 A. Yes, I do.

25 Q. And could you identify that exhibit,

Page 126

1 please?

2 A. Yes. This is a chart that shows the  
3 relative positioning of the three-year LIBOR with  
4 three-year Treasury rate for the period of July of  
5 '07 through July of '08.

6 Q. And is that the same chart that appears  
7 on page 17 of your rebuttal testimony?

8 A. Yes, it is.

9 Q. Only it's in color and readable.

10 A. That's correct.

11 Q. Thank you. Going back to Companies'  
12 Exhibit 2E, your rebuttal testimony, do you have any  
13 corrections that need to be made?

14 A. I do. I have a few that missed the  
15 last-minute edit checking so what I'd like to do is  
16 run through them. First is on page 2, line 17. I'd  
17 like to replace the word "legislature" with "General  
18 Assembly."

19 The next is on page 6, line 4, there's an  
20 extra word, and I would like to scratch the word "to"  
21 between "the" and "selling" on line 4, page 6.

22 Page 7, line 8, fourth word in should be  
23 "this" instead of "his."

24 MR. RANDAZZO: Could I have that one  
25 back, Mr. Baker, please?

Page 127

1 THE WITNESS: Certainly, Mr. Randazzo.  
2 Page 7, line 8, fourth word in, which is "his,"  
3 should be "this."

4 MR. RANDAZZO: Okay. Thank you.

5 A. Page 20, line 12, the last two words  
6 should be hyphenated, "cost-based."

7 And the last one is on page 21, line 7,  
8 there was a missing word between "70" and annually,  
9 and the missing word is "million."

10 Q. Mr. Baker, any other changes that need to  
11 be made?

12 A. No, that's it.

13 Q. Okay. And if I were to ask you the  
14 questions that appear in what's been marked as  
15 Companies' Exhibit 2E, and let's incorporate into  
16 that the color chart that's marked as Companies'  
17 Exhibit 2F, would your answers be the same as are  
18 contained in your rebuttal testimony?

19 A. Yes, they would.

20 MR. RESNIK: Thank you, your Honor. I  
21 have no further questions for Mr. Baker, and he's  
22 available for cross-examination.

23 EXAMINER BOJKO: Thank you.

24 Do we have any volunteers to begin?

25 MR. WHITE: Your Honor, before we start

Page 128

1 cross, I'd like to make a motion to strike.

2 EXAMINER BOJKO: Okay. Please proceed,  
3 Mr. White.

4 MR. WHITE: The question on page 2, "Are  
5 these examples consistent with the legislative  
6 discussion leading up to the passage of Senate Bill  
7 221 and the language of the bill," I'd like to strike  
8 that question and answer. It's hearsay and without  
9 substantiating -- without anything else  
10 substantiating what the discussions were, it  
11 shouldn't be on the record.

12 EXAMINER BOJKO: Do you have a response,  
13 Mr. Resnik?

14 MR. RESNIK: Yes. Mr. Baker has the  
15 specific qualification to testify about what was  
16 going on at the legislature given the fact that, as  
17 he said, he was the lead representative for the  
18 AEP-Ohio companies in that entire process. And so he  
19 is, as many people have given their view of what the  
20 legislature means or doesn't mean -- legislation  
21 means or doesn't mean, I think this gives color, if  
22 you will, from Mr. Baker's perspective about whether  
23 or not cost-of-service concepts are somehow  
24 implicitly in the bill.

25 MR. WHITE: Your Honor, if I may. Giving

32 (Pages 125 to 128)

Page 129

Page 131

1 interpretation to what a statute means is different  
2 than actually testifying to discussions that  
3 occurred.

4 MR. RESNIK: Your Honor, it's not  
5 hearsay. He heard this. This was his personal  
6 knowledge that he is reflecting here.

7 EXAMINER BOJKO: Okay. Do you have any  
8 other ones?

9 MR. WHITE: No, that's the only motion to  
10 strike I have.

11 EXAMINER BOJKO: Are there any other  
12 motions to strike?

13 MR. RANDAZZO: I could probably come up  
14 with something, your Honor.

15 EXAMINER BOJKO: Let's go off the record.  
16 (Discussion off the record.)

17 EXAMINER BOJKO: Let's go back on the  
18 record.

19 Given that this was Mr. Baker's personal  
20 experience and his participation in the matter and  
21 given -- or, to be consistent with all of our other  
22 discussions that we've had on Senate Bill 221  
23 throughout this hearing process, we're going to deny  
24 the motion to strike and we'll allow it and allow  
25 parties to question or cross-examine Mr. Baker on his

1 Did the Commission during the legislative  
2 process propose to establish a just and reasonable  
3 standard?

4 THE WITNESS: I'm sorry, could I have the  
5 question read back?

6 EXAMINER BOJKO: You may.  
7 (Record read.)

8 A. I do not remember the Commission taking  
9 that position.

10 Q. Well, you are aware, are you not,  
11 Mr. Baker, that the just and reasonable standard is  
12 one that's included in the Federal Power Act, right?

13 A. Yes.

14 Q. And presently under the Federal Power Act  
15 AEP is selling electricity in the wholesale market  
16 based upon a market-based pricing mechanism, correct?

17 A. Yes, they are. But I would point you --  
18 I'd link -- in my view the testimony was intended to  
19 link the two, cost of service and just and  
20 reasonable. Where I do agree with you the, FERC has  
21 found market-based rates to be just and reasonable.

22 Q. Okay. But, at least academically,  
23 there's no necessary connection between the just and  
24 reasonable standard and a particular methodology for  
25 establishing prices, is there?

Page 130

Page 132

1 experience during the SB 221 process.

2 Okay. Now do we have any volunteers?

3 MR. RANDAZZO: I'll go.

4 EXAMINER BOJKO: Okay. Thank you,  
5 Mr. Randazzo.

6 ---  
7 CROSS-EXAMINATION  
8 By Mr. Randazzo:

9 Q. Mr. Baker, let's pick up where the motion  
10 to strike left off, and do you regard your experience  
11 during the legislative process as something that  
12 qualifies you as an expert on legislation?

13 A. I would not consider myself an expert, in  
14 general, on legislation; however, I learned a lot and  
15 experienced a lot and probably know more about this  
16 process than, if I had my way, I'd know, want to  
17 know.

18 Q. Fair statement.

19 Now, I'd like to ask you something that  
20 is in the portion of your testimony that's on the  
21 bottom of page 2 and carrying over to the top of page  
22 3, and let me begin, you make reference there to a  
23 "Just and Reasonable Standard." And then you say the  
24 standard was connected to the evaluation of costs  
25 incurred by the companies in setting rates.

1 A. There doesn't have to be.

2 Q. And in your experience dealing with laws  
3 that are associated with regulation of public  
4 utilities, the use of the just and reasonable  
5 standard does not imply a particular ratemaking  
6 methodology, does it?

7 A. I don't think it has to, Mr. Randazzo,  
8 but in states which have been traditional regulation  
9 of generation at state level, those two, cost of  
10 service and just and reasonable, have generally been  
11 linked.

12 Q. Okay. Now, what is your understanding of  
13 the objective behind the just and reasonable  
14 standard? And let me ask the question more  
15 specifically.

16 Is it your understanding of the standard  
17 itself to be one which requires a balancing of  
18 interests between the utility and customers for  
19 purposes of establishing rates?

20 A. Yes, I would agree with that.

21 Q. All right. Is the company's  
22 responsibility to be the provider of last resort a  
23 competitive or noncompetitive function?

24 A. I was asked this question in my second  
25 round of testimony, and I believe I said that it is a

33 (Pages 129 to 132)

Page 133

responsibility of the distribution company and I didn't know how it could be passed off to a competitive supplier.

Q. Okay. I'm asking you if you are aware in my next question. Are you aware of any requirements in Senate Bill 3 as modified by Senate Bill 221 that deals with how pricing for noncompetitive services is to occur and, more specifically, what ratemaking methodology is to be used by the Commission for noncompetitive services?

A. I haven't reviewed that in preparation so I wouldn't venture an answer at this point.

Q. If the General Assembly has specified a ratemaking methodology for noncompetitive services, that, of course, would control, correct? I'll withdraw the question.

A. I'm sorry?

Q. I'll withdraw the question.

Are ancillary services competitive or noncompetitive services?

A. I would believe that -- the way I would answer that, Mr. Randazzo, is I think you're asking me for definitions under the bill, and as I did with POLR, what I'd like to say is that I believe that if a customer shops, they could get -- they could

Page 134

provide ancillary services from their supplier.

Q. Are you aware of anything in Senate Bill 3 as modified by Senate Bill 221, and I'm asking if you are aware, that deals with the question of whether ancillary services are a competitive or noncompetitive services?

A. Again, I have not gone back and researched that for purposes of this testimony.

Q. As part of this application, the electric security plan application, have the companies asked the Commission to declare ancillary services to be competitive or asked the Commission to declare that the provider of last resort function be declared -- be a competitive service?

A. I don't know.

Q. Now, on page 3 as well there's a question I want to ask you about words used in the question, assuming that you had something to do with the question as well as the answer. In the question it refers to true regulation. Can you tell me what you mean by "true regulation" there?

MR. RESNIK: Can I have the question read back, please?

EXAMINER BOJKO: It says "true reregulation."

Page 135

MR. RANDAZZO: Oh, true reregulation, excuse me. That's what I meant to ask. Thank you. I'm sorry, your Honor.

Thank you, Mr. Resnik.

A. What I mean by that in this context is states which have had a plan for deregulation, passed deregulation legislation and have gone back to regulation of generation, as I believe I lay out in this answer which deals with the standard that you virtually eliminate customer choice, that you set rates on a cost of service and things of that ilk.

Q. Okay. And you say on the next page that -- in the sentence that begins on line 1, that "Ohio did none of these things," and from that you're, I think, trying to make the point, are you not, that we no longer have true reregulation in Ohio or we don't have true reregulation in Ohio. Is that the point you're trying to make?

A. I would say that we do not have true reregulation as I defined it in this answer.

Q. Okay. Now, one of the things that is identified on page 3, line 21 in discussing the Virginia legislation is your indication that they have virtually eliminated customer choice. Is it your understanding of Senate Bill 221 that it

Page 136

provides an opportunity for the companies to suggest limitations on shopping as part of an electricity security plan? Is that your understanding?

A. My recollection is there is that kind of provision, but I don't think it's consistent -- if we were to do that, wouldn't be consistent with other parts of the bill so I don't know how you rationalize those two things.

Q. Okay. Now, on the bottom of page 4 and top of page 5 you're there discussing your views on circumstances that might cause the Commission to modify an ESP and what would happen in the event the Commission did, as I read it. When you were on the stand previously, I discussed with you briefly a document that was marked and admitted as IEU Exhibit No. 5. It's the presentation from the EEI conference, the nicely colored document that I would be happy to furnish you a copy.

A. I remember a discussion about that document, yes.

Q. Okay. And --

MR. RANDAZZO: May I approach the witness?

EXAMINER BOJKO: You may.

Q. Mr. Baker, I'd like to ask you to turn to

34 (Pages 133 to 136)

Page 137

Page 139

1 page 9 of that document. And am I correct that that  
2 page is a page that focuses on the earnings guidance  
3 provided by AEP at the Edison Electric Institute  
4 Conference?

5 THE WITNESS: Could I ask that that  
6 question be reread because I'm not sure I understood  
7 the lead-in to them. So if I could have it reread,  
8 I'd know how to answer the full question.

9 Q. The lead-in was we talked about this  
10 before.

11 A. No, I think there was a sentence or two  
12 before that.

13 (Record read.)

14 A. I'm sorry, is that the total -- okay.  
15 Then I read more into what you were asking me.

16 Q. I think so.

17 A. Yes, this is a document that was provided  
18 at the fall EEI conference that deals with our  
19 guidance as far as 2008 and 2009 earnings.

20 Q. Okay. At the bottom of that page 5  
21 there's a statement that says: "The 2009 guidance  
22 provides a range for reasonable Ohio outcome." Do  
23 you see that?

24 A. Yes, I do.

25 Q. As you understand it, the outcome that is

1 would have to evaluate what the outcome was and  
2 decide whether that was acceptable to the company.

3 Q. And based upon page 5 of IEU Exhibit No.  
4 6, there's been some effort on the part of AEP to  
5 identify a reasonable Ohio outcome for purposes of  
6 providing earnings guidance to the investment  
7 community, right?

8 MR. RESNIK: Can we have that back? I'm  
9 not sure you had the reference right.

10 EXAMINER BOJKO: I think Mr. Randazzo  
11 said this chart was in both documents. We've been in  
12 IEU Exhibit 5 on page 9.

13 MR. RANDAZZO: Yes, I'm sorry. And it's  
14 the same chart on page 5 of IEU Exhibit No. 6. Sorry  
15 for the confusion.

16 A. Mr. Randazzo, in developing guidance, as  
17 I understand the way our financial group does this,  
18 they look at potential series of outcomes across the  
19 range of our total business and get a high and a low  
20 outcome. So I don't know the individual pieces that  
21 go into this, and there wasn't a single-point  
22 estimate that said this is reasonable or this is not  
23 reasonable. The company hasn't made that  
24 determination.

25 Q. Okay. Fair enough.

Page 138

Page 140

1 being referenced there would be the outcome of this  
2 proceeding, right?

3 A. Yes. We are talking about this filing of  
4 an ESP, but that is a broad term that deals with one  
5 of the many issues that goes into the creating of the  
6 guidance.

7 Q. Okay. What was the reasonable Ohio  
8 outcome that was embedded in the earnings guidance?

9 A. I don't have that answer.

10 Q. Well, let me ask it this way, if there  
11 was a reasonable Ohio outcome and it was identified  
12 to the Commission and it happened to be different  
13 than the proposal as filed by the companies, it would  
14 be okay with AEP if the Commission approved that  
15 reasonable outcome, right?

16 A. That one I will need to have reread.

17 Q. Let me reask it.

18 A. Thank you.

19 Q. Is the only outcome that is reasonable to  
20 AEP for purposes of an electric security plan the  
21 outcome that's been proposed in the application?

22 A. The Commission under the legislation, as  
23 I understand it, has the right to modify our plan.  
24 When and if they do, I would certainly hope they  
25 would approve it, but if and when they modify it, we

1 If we could turn to page 5, bottom of the  
2 page where you focus on the Purchase Power Proposal.

3 A. This is in my testimony, not the exhibit?

4 Q. Yes, it is, I'm sorry. Yeah, good  
5 question.

6 Turning to page 5 of your rebuttal  
7 testimony where you begin the discussion of the  
8 Purchase Power Proposal, the title Purchase Power  
9 Proposal is the same as the slice-of-system proposal?

10 A. Yes, it is.

11 Q. Now, if the Commission were to approve  
12 this aspect of the application, and regardless of the  
13 percentage that is selected for the portion that is  
14 sourced from the market, which source of supply, the  
15 market purchases or existing generating assets owned  
16 by the companies would flow first through the meter?

17 A. The way I would describe that,  
18 Mr. Randazzo, is that these purchases would be  
19 dedicated to the Ohio Power and Columbus & Southern  
20 companies and, therefore, would be part of the FAC  
21 charge.

22 Q. Okay. What I'm really asking here is  
23 let's assume that -- as I understand it, you're going  
24 to be purchasing based upon a forecast of  
25 requirements, correct?

35 (Pages 137 to 140)

Page 141

1 A. Correct.

2 Q. Okay. And let's assume that in 2009 you  
3 forecast normal weather and sales associated with  
4 normal weather and you purchase, for purposes of this  
5 discussion, 5 percent of your total SSO requirements  
6 from the marketplace based upon that forecast.

7 A. All right.

8 Q. Are you with me?

9 A. I'm with you.

10 Q. As weather actually turns out, it  
11 deviates from normal and that deviation results in  
12 actual sales that are less than the forecast. Does  
13 the cost of the 10 percent purchase get reflected in  
14 the FAC with the residual cost being determined by  
15 the generating assets owned by the companies, or is  
16 there some blend of those actual purchases with the  
17 existing generation to determine how much flows  
18 through the FAC?

19 A. We haven't developed the RFP for this,  
20 Mr. Randazzo, but let me try to answer your question  
21 in how I think it would be done.

22 We would be going out for the slice of  
23 system based on -- to give people an idea of what  
24 their expected supply requirement would be, but if  
25 there were weather or loss of load, then that would

Page 142

1 reduce the amount of power we would purchase under  
2 the 5 percent.

3 Q. Okay. So you would end up with the  
4 percentage being dictated by the ratio between actual  
5 sales and actual purchases, correct?

6 A. What I'm saying is that you would be  
7 forecasting and telling the suppliers to supply  
8 5 percent of the load and you would change it over  
9 time as conditions change. That's where I think we  
10 would go, but as I say, we haven't finalized that.

11 Q. Well, if you did anything other than  
12 that, then the actual percentage of purchases at  
13 market prices would be something higher or above the  
14 10 percent number that I used in my hypothetical,  
15 right?

16 A. Well, if we did it based on a pure  
17 forecast, it could be higher or lower.

18 Q. Right. But, as you say, you haven't  
19 developed exactly how that's going to work yet?

20 A. No. But as we've thought of slice of  
21 system, the way I described it is generally the way  
22 we've done it.

23 Q. Okay. Now, on page 6 and also on page 7  
24 you discuss the expectation that the companies had  
25 relative to the Monongahela Power and Ormet

Page 143

1 transactions. As a general proposition do you think  
2 that the expectations in these areas should manifest  
3 themselves in the results produced by regulatory  
4 actions?

5 THE WITNESS: I'm going to need that  
6 question read back.

7 (Record read.)

8 A. I'm not sure I understand the question,  
9 but let me try to answer it as best I can. As we  
10 looked at it, our expectation was that we would be  
11 going to market and we recognize that the Commission  
12 only needed to deal with the period up till we went  
13 to market.

14 It was our expectation that if we had  
15 something other than market, we could come to this  
16 Commission, as we did -- as we have done in this  
17 case, and ask for treatment, and it would have been  
18 our expectation that we would have gotten the same  
19 kind of treatment we've asked for here.

20 Q. Well, let's talk about -- you picked a  
21 certain time frame here on expectations. When Senate  
22 Bill 3 was enacted, was it the expectation that  
23 market prices would be lower than cost-based  
24 ratemaking prices that existed at the time?

25 A. I would say that probably different

Page 144

1 people had different opinions on that.

2 Q. Well, AEP --

3 A. I'm sorry.

4 Q. Let's talk about AEP. Didn't you --  
5 didn't the companies request stranded cost recovery  
6 as part of the transition to --

7 A. Yeah. I may have misunderstood your  
8 question so let me try to clarify it.

9 Q. Sure.

10 A. I thought what you were saying was an  
11 expectation of what it would be in 2006 when we went  
12 to market.

13 Q. Right.

14 A. And I believe that we did feel that our  
15 forecast said there would be stranded costs for AEP.  
16 I know there were people who said to the contrary and  
17 said the prices in the case of AEP companies, it  
18 would have been -- the price would have been higher.  
19 That led to the debate about whether or not AEP had  
20 stranded costs.

21 Q. Right. And the Commission awarded  
22 stranded cost recovery for AEP, correct?

23 A. No, I don't believe they did.

24 Q. Okay. If the Commission did order  
25 stranded cost recovery in the form of transition cost

36 (Pages 141 to 144)

Page 145

Page 147

1 payments made by customers, would you agree that the  
2 expectation at the time was that market prices would  
3 be less than legacy prices?

4 MR. RESNIK: Are you done?

5 MR. RANDAZZO: Yeah.

6 MR. RESNIK: I'm sorry. I would object.

7 The regulatory transition charges were not stranded  
8 costs associated with changing value of the  
9 generation plants relative to the market price that  
10 was anticipated. So I think the question is assuming  
11 that the regulatory transition charges were stranded  
12 costs in the sense that the prior question was asking  
13 about it.

14 EXAMINER BOJKO: I think Mr. Baker can  
15 answer the question if he understands the question  
16 and he is more than capable of clarifying his  
17 response if he needs to.

18 THE WITNESS: Could I have the question  
19 read back, please?

20 (Record read.)

21 A. My recollection, it could be flawed,  
22 Mr. Randazzo, was the Commission approved a  
23 settlement, and the settlement was a -- with a number  
24 of parties, and we waived our rights to the stranded  
25 cost in order to get regulatory assets.

1 Q. Okay. If customers of AEP believed  
2 that -- somehow, believed that market prices would be  
3 lower, do you think it would be appropriate to  
4 respect that expectation by producing a regulatory  
5 outcome that satisfied that expectation?

6 A. I think regulatory outcomes are  
7 determined by what the General Assembly tells the  
8 Commission to do and they have to interpret it.

9 Q. All right. Let's move on to another  
10 subject. On page 7 you talk here again about what  
11 I'll call the slice-of-system proposal, and here  
12 you're saying that the proposal "will help the  
13 Companies encourage further economic development in  
14 their service territories." I'm referring to page 7,  
15 line 16 and 17. Do you see that?

16 A. Yes, I do.

17 Q. As a general proposition the  
18 slice-of-system proposal results in a standard  
19 service offer price that is higher than it would  
20 otherwise be without the slice-of-system component,  
21 right?

22 A. I would say that's the expectation today,  
23 not knowing where the cost of generation --

24 Q. Sure.

25 A. -- will be over this whole period, I

Page 146

Page 148

1 Q. So your understanding is that the  
2 provisions dealing with the recovery of regulatory  
3 assets was something other than recovery that was  
4 associated with transition costs or stranded costs?

5 A. It had nothing to do, in my mind, with  
6 the difference between market and the cost of our  
7 assets. It had to do with there were regulatory  
8 assets that we had on the books for stuff that  
9 happened prior to 1999 that we didn't want to write  
10 off.

11 Q. All right. Let's go back to  
12 expectations. Was it the expectation at the time of  
13 Senate Bill 3 that market prices would be less than  
14 the prices that had been previously produced by  
15 traditional regulation?

16 THE WITNESS: Can I have that read back,  
17 please?

18 (Record read.)

19 A. I believe I answered that question. I'm  
20 not sure I'm catching the nuance, if there is one,  
21 but I believe there were some people who thought that  
22 market prices -- and I'm talking purely in the case  
23 of AEP-Ohio. Some thought the prices would be --  
24 market prices would be higher and some thought it  
25 would be lower.

1 can't guarantee that, but for purposes of this  
2 filing, yes, I'd agree with that.

3 Q. Okay. So how is it that the  
4 slice-of-system proposal which produces somewhat  
5 higher prices in the aggregate helps economic  
6 development?

7 A. Again, let's clarify. You said would  
8 result in higher prices.

9 Q. Right.

10 A. And I put a caveat in the last answer --

11 Q. Well, if I may, Mr. Baker. Mr. Nelson  
12 who testified previously indicated that one of the  
13 reasons why we ought to consider providing carrying  
14 charges on environmental costs is that it will  
15 continue to make the lower-cost coal-fired generation  
16 available to customers at a price that's  
17 significantly below market.

18 But that aside, I understood your caveat  
19 before, and I'm happy for you to make it again, but  
20 the context of my question was understanding the  
21 caveat that you made previously.

22 A. Certainly. What I meant by that term was  
23 that we would have started to lock in supplies and we  
24 would have a good idea of what the cost would be.  
25 Now, we wouldn't have it all locked in because we

37 (Pages 145 to 148)

Page 149

1 talk about doing this in tranches over periods, and  
2 there would -- I believe that the rate will still be  
3 very economically attractive, and we will know we  
4 would have supplies in order to meet that rather than  
5 having to go out in the market in realtime when it  
6 happens and be debating as to whether it's  
7 economically advantageous to pursue economic  
8 development relative to the then cost of power in the  
9 market.

10 Q. Well, I thought on page 6 that you made  
11 it clear finally that the slice-of-system proposal  
12 has nothing to do with the companies' need for  
13 generation supply to serve Ormet or Monongahela Power  
14 customers. That's on page 6, line 10 and 11. Right?

15 A. Those are what the words say, but what we  
16 are saying is we are not putting the proposal forward  
17 based on a need for power, it's about the issue  
18 around Mon Power and Ormet and our expectations going  
19 forward.

20 Q. Well, I understand the expectation part.  
21 We talked about that. I'm just trying to connect the  
22 dots here in terms of how a proposal that in general  
23 has the tendency to increase prices relative to an  
24 ESP without the slice-of-system proposal would  
25 encourage economic development.

Page 150

1 A. Because we would have more supply  
2 available to us at known prices that we could then  
3 help the State go after economic development with  
4 prices that I believe will still be attractive  
5 relative to the competition around us.

6 Q. Well, you would also know the cost of  
7 your own generation, right, the company's generation?

8 A. We would have a good estimate.

9 Q. Would it -- strike that.

10 Now, turning to the off-system sales  
11 discussion on page 8 and 9 of your testimony, are you  
12 aware of how off-system sales were treated for  
13 purposes of developing Columbus & Southern and, more  
14 specifically, Ohio Power's rates and charges  
15 historically under traditional regulation?

16 A. If we're talking about the period of  
17 let's just use an example the rate cases that were  
18 done in the '90s which set the rates that are the  
19 base of our current rates, those off-system sales  
20 were treated as credits to rate base.

21 Q. And so the -- translating that, if we  
22 can, Mr. Baker, would it be fair to say that in those  
23 rate cases rather than making adjustments to rate  
24 base to exclude a portion of the asset value that  
25 might be associated with making off-system sales, the

Page 151

1 full amount of generating asset plant cost was used  
2 for purposes of developing retail rates under  
3 traditional regulation?

4 A. I'm not sure I can -- I won't buy the  
5 proposition that starts out with "as opposed to doing  
6 this, therefore, that." I will agree that they were  
7 treated as a credit to rate base.

8 Q. If those off-system sales costs were  
9 treated as a credit to rate base, then is it your  
10 understanding that the full amount of the generating  
11 plants associated with providing off-system sales was  
12 included in rate base?

13 MR. RESNIK: I'm sorry, can I have that  
14 question read back, please?

15 EXAMINER BOJKO: Yes.

16 (Record read.)

17 A. The full amount of the -- or the fixed  
18 costs associated with the full capacity for those two  
19 companies was included in rate base because those  
20 plants were built to serve the internal load of those  
21 two companies.

22 Q. Right. And historically, particularly in  
23 the case of Ohio Power, it was quite common in those  
24 traditional rate cases for stakeholders to make  
25 claims that Ohio Power had excess capacity because of

Page 152

1 the large reserve margin, was it not?

2 A. I would not be surprised. I notice it  
3 appears -- has appeared that way in various states.

4 Q. And would you accept that, subject to  
5 check, in the case of Ohio Power?

6 A. I would accept it, subject to check, that  
7 some intervenors took that position.

8 Q. And would you accept, subject to check,  
9 that the Commission rejected excess capacity  
10 arguments because of the ability to make off-system  
11 sales to reduce and -- thereby reduce the cost  
12 ultimately that was borne by customers?

13 A. I will accept that, subject to check.

14 Q. Okay. And, based upon that history,  
15 would you also accept then that the generation rates,  
16 and particularly the non-FAC rates, include costs  
17 associated with generating assets, some of which for  
18 some portion of time have been used to support  
19 off-system sales?

20 A. To support off-system sales, we make  
21 off-system sales with surplus energy that we have on  
22 the system, and it comes about because it's not  
23 needed at that time to serve the native load, even  
24 though they were built to serve native load.

25 Q. And now the answer to my question.

38 (Pages 149 to 152)

Page 153

1 A. That was the answer to your question.

2 Q. Well, let me ask it this way. If those  
3 plants were built to serve native load customers, why  
4 is it that it's appropriate to take those assets to  
5 market?

6 A. Because it's better than letting surplus  
7 energy sit idle.

8 Q. All right. And if native load customers  
9 are paying for those generating assets, do you think  
10 it's appropriate they receive some portion of the  
11 benefit that's derived from utilizing those assets  
12 when they would otherwise be idle?

13 A. I don't think the customers are paying  
14 for those generation assets. They're paying for  
15 service that they received as rates were set,  
16 Mr. Randazzo, back in the mid-'90s. We've had many  
17 changes. We've gotten away from cost of service and  
18 we just continue to make off-system sales, and we  
19 said what we think the right treatment is.

20 Q. Okay. Mr. Baker, at page 20 -- and this  
21 is the last area of my questions. Page 20 you begin  
22 a discussion in your rebuttal testimony of sale or  
23 transfer of certain generating assets. I thought  
24 from your prior testimony that there was no current  
25 plan to transfer or sell any of these generating

Page 154

1 assets. Is there a current plan to sell or transfer  
2 any of these generating assets?

3 A. No.

4 Q. So do you think it's unreasonable to  
5 withhold authority that may be required from this  
6 Commission on the transfer or sale of generating  
7 assets until such time as the companies actually have  
8 a plan to sell or transfer the generating assets?

9 A. I think it's appropriate for that  
10 authority to be given as part of our ESP, which is  
11 part of our total plan.

12 Q. Well, didn't you previously receive  
13 authority from the Commission to transfer generating  
14 assets?

15 MR. RESNIK: I'll object, your Honor.  
16 It's been asked and answered from Mr. Baker's prior  
17 stint on the stand.

18 MR. RANDAZZO: That's fine.

19 Q. Mr. Baker, I'd like you to assume that  
20 AEP previously asked and received -- asked for and  
21 received authority to transfer generating assets and  
22 elected to not transfer generating assets. With that  
23 history, why is it that it is so important for you to  
24 receive authority to transfer these generating assets  
25 at a time when you have no plan to transfer the

Page 155

1 generating assets?

2 A. Let's talk about the time, Mr. Randazzo.  
3 The plants we're talking about were not part of that  
4 previous request for EWG status that was put in front  
5 of this Commission. These plants -- these plants are  
6 ones that were bought after Senate Bill 3 passed in  
7 anticipation of going to the market, and the  
8 shareholders of the company took the risk on these  
9 plants and, therefore, I think it's appropriate for  
10 us to have the authority to, if we choose, to  
11 transfer or sell these assets at our discretion.

12 Q. Okay. That's as straightforward as  
13 anybody could put it, Mr. Baker.

14 MR. RANDAZZO: Thank you very much.  
15 That's all I have.

16 EXAMINER BOJKO: Mr. Petricoff?

17 MR. PETRICOFF: Thank you, your Honor.

# 19 CROSS-EXAMINATION

20 By Mr. Petricoff:

21 Q. Good afternoon, Mr. Baker.

22 A. Good afternoon, Mr. Petricoff.

23 Q. This is the third and probably final time  
24 that we'll engage in this dialogue, at least  
25 hopefully, in this case.

Page 156

1 A. Well, I'll miss it.

2 Q. As will I.

3 If you would, turn to page 4 of your  
4 testimony, and I want to refer you to the sentence  
5 that starts on line 6, and I'll read it to you, it  
6 says: "Section 4928.143(B)(2), Revised Code, makes  
7 it clear that a company may provide any provision in  
8 an ESP for approval by the Commission as long as the  
9 ESP in the aggregate is more favorable to customers  
10 when compared with the expected results from an MRO  
11 option."

12 I want to explore that statement with  
13 you. What if the ESP application had a provision in  
14 it that violated a state statute but the ESP in the  
15 aggregate was more favorable than the expected  
16 outcome of the MRO, would the Commission have to  
17 accept the ESP or could it require the offending  
18 provision to be amended?

19 A. I assume that the Commission cannot do  
20 something that breaks the law.

21 Q. What if the ESP had a provision that  
22 violated a Commission rule but the ESP in the  
23 aggregate was more favorable than the expected  
24 outcome of an MRO, would the Commission have to  
25 accept the ESP or could the Commission require the

Page 157

1 offending provision be amended?

2 A. I don't know the answer to that because,  
3 unlike the law, I assume the Commission could change  
4 the rule.

5 Q. So you're uncertain on that one?

6 A. My answer is my answer.

7 Q. Well, my question is that you're  
8 uncertain whether the Commission would have the  
9 authority to amend an ESP because it violated a  
10 Commission rule?

11 THE WITNESS: Can the question be read  
12 back?

13 (Record read.)

14 A. I'd say I was uncertain.

15 Q. One last question in this series. What  
16 if the ESP had a provision that violated an  
17 established regulatory principle but the ESP in the  
18 aggregate was more favorable than the expected  
19 outcome of the MRO, would the Commission have to  
20 accept the ESP or could it require the offending  
21 provision to be amended?

22 A. I don't know what you mean by "regulatory  
23 principle."

24 Q. Okay. Let's assume that a regulatory  
25 principle would be the outcome that the Commission

Page 159

1 redefine regulatory principle based on Senate Bill  
2 221. I don't know how they're going to do that, but  
3 this is a bill that is unlike anything I've ever seen  
4 before, and it's going to create tremendous  
5 challenges so I'm not sure there is a historic  
6 regulatory principle that won't have to be tested.

7 Q. So it's your opinion that past decisions  
8 and past practices of the Commission will have to be  
9 reexamined in toto when approaching this case?

10 A. I think that the Commission will have to  
11 consider what Senate Bill 221 tells them to do when  
12 they have questions come before them.

13 Q. Let's move on here. On line 8 you recite  
14 that -- and this is we're measuring now between the  
15 ESP and the MRO -- that in the aggregate it is more  
16 favorable, and I want you to focus on the word  
17 "favorable."

18 In your opinion when the Commission  
19 evaluates whether an ESP is more favorable in the  
20 aggregate than the expected outcome of an MRO, is it  
21 strictly an economic or cost per kWh test?

22 A. No.

23 Q. So it's possible then, that the ESP could  
24 be lower per kWh but because it has an offending  
25 provision in it, the Commission could deem it to be

Page 158

1 has taken when faced with similar issues in similar  
2 cases over a long period of time.

3 MR. RESNIK: And, your Honor, I'm going  
4 to object. There by definition cannot have been  
5 similar cases to an ESP under Senate Bill 221. I  
6 think that's what's taken us all so long to get  
7 through this. So when we talk about established  
8 regulatory principles, those principles were  
9 established in a different regulatory environment so  
10 I would object to the question.

11 EXAMINER BOJKO: I guess I didn't think  
12 Mr. Petricoff's question had to be necessarily in the  
13 here and now.

14 I think you're just speaking generally if  
15 there was a regulatory principle in place; is that  
16 right?

17 MR. PETRICOFF: That's correct.

18 Q. And maybe I'll give you an example of a  
19 regulatory principle and then see if that can assist  
20 you. For example, over the years the Commission has  
21 decided that there -- that customers in like position  
22 should be treated in like manner by the utility.  
23 That's an example of an established utility  
24 principle.

25 A. I think the Commission's going to

Page 160

1 less favorable than the MRO?

2 A. Offending? Offending is kind of an  
3 interesting word. Do you mean something that is not  
4 permitted under law, going back to your earlier  
5 question?

6 Q. No. By "offending" I was thinking that  
7 it had a -- well, let me try it again, then.

8 Assuming that the ESP was lower by a  
9 penny a kilowatt-hour than the MRO but it had a  
10 provision in it which was not illegal but in the  
11 consideration of the Commission pernicious or  
12 offensive but not illegal, could the Commission,  
13 based on that, decide that it was not favorable, the  
14 ESP was not as favorable to the MRO, even though it  
15 was cheaper?

16 A. The Commission has the authority to  
17 reject our plan or to reject an ESP. I think the  
18 criteria should be looking at whether the ESP as it's  
19 defined here in the aggregate is more favorable.  
20 They're going to have to make that determination, and  
21 they are going to tell us whether they accept,  
22 modify, or reject our plan and we will react to that  
23 activity. I don't tend to tell the Commission what  
24 they can and cannot do.

25 Q. Let's move from reject and approach the

40 (Pages 157 to 160)

Page 161

1 same issue and ask what about amend. Can the  
2 Commission amend the ESP without rejecting it because  
3 it considers an aspect of the ESP to be not as  
4 favorable as the MRO?

5 A. I think I just answered that I don't tell  
6 the Commission what they can and cannot do. They  
7 will do what they do, and we will have to determine  
8 whether the plan is still acceptable to us.

9 Q. Fair enough.

10 Let's turn to page 13 of your testimony.  
11 If you would, I'd like you to turn to line 18, and  
12 here's the sentence I want to have a dialogue with  
13 you about. Your testimony says: "No. First, I have  
14 been advised by counsel that customers who return to  
15 the Companies' SSO upon the default of their  
16 competitive supplier are statutorily entitled to  
17 service at the SSO rate."

18 I want you to focus in on the word  
19 "default." What did you mean there when you said  
20 "default"?

21 A. Well, it was the advice of my counsel, so  
22 I assumed that what we were talking about was for  
23 whatever reason the competitive supplier failed to  
24 continue to supply a customer under a contract.

25 Q. Okay. And if a customer -- well, let me

Page 163

1 Q. Let me give you another situation. Let's  
2 say that there wasn't a default but the CRES supplier  
3 stopped supplying because the contract came to an  
4 end. It was a year contract. We're now in the  
5 366th day, assuming this wasn't a leap year, and  
6 the CRES stops supplying. In that situation does the  
7 customer have a right to come back to the SSO rate?

8 A. I believe they do.

9 Q. Let's say that the customer now is --  
10 actually, before we do that, your advice from counsel  
11 seemed to be specific as to upon default. Your  
12 understanding then, is that it's broader than on  
13 default. It's just anytime the customer wants power  
14 they can return to the SSO rate?

15 A. With the exception of the governmental  
16 aggregation that I talk about later, it is my  
17 understanding that if a customer comes back for  
18 whatever reason, that they can come back at the SSO  
19 rate.

20 Q. Well, let's talk about the government  
21 aggregation now. If you have a government  
22 aggregation and the government aggregator has given  
23 the notice under section 4928.20(J) that it does not  
24 care to pay the POLRs or have its members pay the  
25 POLRs and that they will return at market. In that

Page 162

1 ask you this, does a CRES, a competitive retail  
2 electric supplier now if they are going to qualify to  
3 do business in AEP or on the AEP systems, do they  
4 have to supply a bond or provide other financial  
5 security?

6 A. I would expect they would.

7 Q. And the company generally can rely upon  
8 that security in the case that the CRES does not meet  
9 its obligations to supply power?

10 A. Again, I would assume so, but I'm not  
11 sure that it necessarily would cover whatever the  
12 impacts were.

13 Q. Well, now I'm just focusing in on the  
14 word "default." You would agree with me that in a  
15 situation like that where the CRES didn't supply and  
16 the company supplied and then, you know, confiscated  
17 the bond or took other actions, that that would be a  
18 default that would fit in the language that -- your  
19 testimony here on lines 18 to 20.

20 A. I didn't get into -- in thinking this  
21 through, Mr. Petricoff, I wasn't thinking about what  
22 the -- what bonds were out there or what the company  
23 could do with those bonds. It was purely that if  
24 there was a default, as I understand it, that the  
25 customers could come back at the SSO rate.

Page 164

1 case if there's a default, do the customers come back  
2 at market rates rather than the SSO rate?

3 THE WITNESS: Could I have that read  
4 back, please?

5 (Record read.)

6 A. We had a lot of dialogue about this in my  
7 second round of testimony, and the Bench was asking a  
8 number of questions about the standby and the POLR,  
9 and I indicated that I wasn't sure how the Commission  
10 would deal with POLR and standby, whether they were  
11 one and the same or not. And then we got into a  
12 dialogue about what standby service was, and there  
13 were current tariffs that had standby service. So at  
14 that point I indicated I really didn't know exactly  
15 how the Commission would treat the governmental  
16 aggregation in relation to our request for POLR but  
17 they would do what they did, and we would look at it.

18 I also in my direct testimony talked  
19 about the potential that although, as you described  
20 it as I think what the law provides, that there may  
21 be a situation where if, in fact, the market rates  
22 were so high and that's the reason the governmental  
23 aggregator got out of business -- went out of  
24 business, there is a chance that we would not be  
25 allowed to charge market-based rates. That's

41 (Pages 161 to 164)

Page 165

Page 167

1 captured in my direct testimony.

2 Q. Well, I want to see if we can funnel down  
3 to something. What is your understanding today as to  
4 the ability of a governmental aggregation to waive  
5 the POLR charges as you have -- you being AEP -- have  
6 applied for them in this case and come back if the  
7 customers come back at market?

8 A. We indicated that we thought the POLR  
9 charge was nonbypassable regardless of aggregation,  
10 and it was brought to my attention that the POLR  
11 might be a standby and, therefore, we might be  
12 precluded from doing it, and I said in that case  
13 that's what the Commission will tell us, but our  
14 proposal was that POLR is there regardless.

15 Q. Okay. And you've not received similar  
16 advice from counsel as you have on line 18 and 19 as  
17 to what happens with the governmental aggregation as  
18 you discuss on page 14 in lines 1 to 3.

19 A. Nothing more than what's in my direct  
20 testimony.

21 Q. In that case I'd like to -- I want to ask  
22 you a series of questions about the fuel adjustment  
23 clause now.

24 A. Can you point me to a section in my  
25 testimony that we're talking about?

1 what everyone was -- what I read other people's  
2 testimony to say was you don't have a risk because  
3 just go out and buy at market and you got it covered.

4 When we were in -- when I was sitting in  
5 listening to Miss Medine testify, she took this  
6 position and then followed it up with, but if your  
7 own generation is cheaper, then you wouldn't go out  
8 to the market and buy it, you would use your own  
9 generation.

10 So we've got a bit of dichotomy between  
11 where what people are saying on one hand and then  
12 what they say a couple minutes later about economic  
13 dispatch and how you do resources.

14 If you're asking do they have a prudence,  
15 can they look at prudence, of course they'll look at  
16 prudence as far as the purchase decision or the  
17 dispatch decision. Yes, they'll look at this --

18 MR. PETRICOFF: Your Honor, I move to  
19 strike. It's nonresponsive. The question asked  
20 about Commission authority.

21 MR. RESNIK: Your Honor, could I have the  
22 question and answer read back, please?

23 EXAMINER BOJKO: Yes.

24 (Record read.)

25 MR. RESNIK: I think --

Page 166

Page 168

1 Q. Yes, I can. Actually, these questions  
2 are going to center around your testimony on page 14,  
3 lines 7 to 9, where you indicate that your  
4 understanding that this current Commission cannot  
5 bind some future commissions that would have to  
6 decide whether the companies could flow through their  
7 fuel adjustment clause, the market prices of serving  
8 the loads returning to customers. I want to explore  
9 that concept with you.

10 Let's start with an easy example. If the  
11 fuel adjustment clause requested by AEP is approved  
12 by the Commission in 2009 and in 2010 500 new  
13 customers move into the AEP territory, could the  
14 Commission in 2010 deny recovery by AEP of the fuel  
15 and purchased power costs associated with that  
16 incremental load of 500 new customers because the  
17 fuel adjustment clause was authorized by a past  
18 Commission?

19 THE WITNESS: Could I have the question  
20 read back, please?

21 (Record read.)

22 A. The issue we're trying to address here is  
23 the idea that you just go out and buy at market to  
24 serve the load, not whether or not you can use your  
25 own generation or the purchase. The implication of

1 EXAMINER BOJKO: Actually, well, he  
2 didn't answer it. I mean, the question wasn't  
3 prudence that Mr. Petricoff was asking, so the answer  
4 will be stricken.

5 And, Mr. Baker, maybe you could try to  
6 answer the question. I was looking for some response  
7 in that long answer somewhere and I just couldn't  
8 find it.

9 THE WITNESS: Okay. I was trying, but if  
10 I didn't do it, I'll try again.

11 EXAMINER BOJKO: Does the Commission have  
12 authority under his hypothetical to modify the  
13 previous decision?

14 THE WITNESS: I don't believe that  
15 they -- if the question was around if a fuel  
16 adjustment clause is put in place, could they deny  
17 passing through -- costs through a fuel adjustment  
18 clause, I think the answer is no. That, I think, is  
19 set up as far as this bill.

20 What we're talking about here is a  
21 specific action the company takes. This is the  
22 action of going out and purchasing power to serve  
23 returning customers and flow it through the FAC. I  
24 think a future Commission could decide that they  
25 didn't like that activity if there were cheaper

Page 169

1 generation available in the fleet, and that's the  
2 risk that I think we have.

3 Q. (By Mr. Petricoff) But it is your  
4 testimony and your belief that the Commission in 2010  
5 could not go back and redo the fuel adjustment clause  
6 in terms of passing through fuel and power prices  
7 that took place in 2009 if it was done in accordance  
8 with a fuel adjustment clause that was approved.

9 MR. RESNIK: Your Honor, I'm going to  
10 object because Mr. Petricoff is switching from the  
11 narrow point that Mr. Baker just identified in his  
12 answer that we're talking about a means of dealing  
13 with the POLR issue and buying market power to do  
14 that, which is being suggested by some parties, and  
15 then we should pass it through the fuel clause which,  
16 of course, is not our proposal. And he's -- his  
17 question is talking on a much broader scale, well, if  
18 the Commission approves a fuel clause, can they deny  
19 costs.

20 EXAMINER BOJKO: I think that was the  
21 point of Mr. Petricoff's question. I was trying to  
22 figure out exactly what Mr. Baker said because his  
23 response was twofold, and I think he was seeking that  
24 clarification, so let's let Mr. Baker clarify if he  
25 can.

Page 171

1 Commission issued a fuel adjustment clause and said  
2 for the period of time that's covered by this fuel  
3 adjustment clause, all purchased power and fuel costs  
4 will be passed through, wouldn't you agree that that  
5 would, in fact, bind future commissions until the  
6 time that those -- that the future commissions change  
7 that order prospectively?

8 A. Okay. Let's -- if you would allow me,  
9 I'd like to just use what I was talking about in this  
10 section, not to just have the broad generic, and I  
11 hope that that answers your question. I'm really  
12 trying to --

13 Q. I want a specific answer to my  
14 theoretical question. Going to come down to the POLR  
15 in a minute. That's my next question.

16 MR. RESNIK: Can I have the question read  
17 back, please?

18 EXAMINER BOJKO: Yes.  
19 (Record read.)

20 MR. RESNIK: Well, your Honor, I guess  
21 I'm going to object because I'm not sure where this  
22 is going. I think that's exactly consistent with  
23 Mr. Baker's testimony that this Commission cannot  
24 bind a future Commission, the future as it's  
25 conditioned, until the Commission in some future

Page 170

1 THE WITNESS: Can I have it read back,  
2 please?

3 (Record read.)

4 A. I tried to answer that as to the first  
5 part so I'll try to do it again and hopefully be a  
6 little more clear. I think if the Commission  
7 approved a fuel adjustment clause as provided for in  
8 this bill, that they could not say we couldn't have a  
9 fuel adjustment clause going forward. Decisions on  
10 how that fuel adjustment clause is done I think could  
11 be changed in the future.

12 Q. But I want to narrow in just one more  
13 level, one more gradation level down, and that is on  
14 lines 7 and 8 of your testimony you say that the  
15 Commission cannot bind some future Commission, but  
16 isn't it true from your past answer that the  
17 Commission in 2009 can, in fact, bind future  
18 commissions as to what can go through the fuel  
19 adjustment clause, at least retroactively, to any  
20 future action of the Commission?

21 I'll withdraw the question. I've got to  
22 fix it up a bit.

23 Let's go back and look at this language  
24 that says the Commission cannot bind some future  
25 Commission. I'm asking you now that if this

Page 172

1 point changes what this Commission is doing --

2 EXAMINER BOJKO: I think we're focusing  
3 on semantics, and I think that maybe Mr. Baker gets  
4 the difference from what he said previously.

5 Do you understand the question?

6 THE WITNESS: Let me try. First of all,  
7 I don't think the Commission would ever put out an  
8 order that says all purchased power and all fuel  
9 would be allowed to be flown through a fuel clause.  
10 So I have trouble with the question because of the  
11 premise it sets on.

12 And then if you start to say, okay, we're  
13 not going to flow through all purchases and all fuel  
14 regardless of what the company does, I think you'd  
15 have to get down to the specifics, which is what I  
16 was trying to do with my answer.

17 EXAMINER BOJKO: I think, Mr. Baker, the  
18 confusion is that you were saying that you believe  
19 that if a mechanism to recover such fuel costs was  
20 approved by the Commission, that that would be  
21 binding, but the exact costs that flow through that  
22 mechanism may or may not be approved by future  
23 Commissions, is that --

24 THE WITNESS: That's what I was trying to  
25 say.

43 (Pages 169 to 172)

Page 173

EXAMINER BOJKO: Is that a good summary?

THE WITNESS: Thank you.

Q. (By Mr. Petricoff) Mr. Baker, if the Commission could authorize a fuel adjustment clause that couldn't be amended, save for prospectively that would cover new customers moving into the area, I think 500 -- we'll stick with the analogy of 500 new customers. Could the Commission likewise have the authority to pass a fuel adjustment clause that says 500 returning customers from CRES suppliers, any excess costs -- or, the costs of serving those customers would be flowed through the fuel adjustment clause? Would they have the authority to do that?

A. I believe they have the authority to do it. The question is not around flowing through the cost of serving customers; it's flowing through the cost of purchased power specifically at market for those returning customers. That's a different hypothesis.

Q. Well, let's funnel down to the final question, then. If the Commission -- do you believe that the Commission has the authority to approve a fuel adjustment clause that said any customers returning because of a default from a CRES provider will be provided standard service at the standard

Page 174

service rates and the cost of the purchased power fuel for serving those customers will be flowed through the fuel adjustment clause?

MR. RESNIK: And just to clarify, is he asking him to disregard the advice of counsel that he received?

MR. PETRICOFF: That's a much more complex question that is irrelevant.

MR. RESNIK: Well, I'd like to think not.

EXAMINER BOJKO: That's overruled.

Let Mr. Baker answer that question if he can because now we're trying to get even narrower from where we were discussing a few minutes ago.

MR. PETRICOFF: This is the final question in the series.

THE WITNESS: Can I have the question reread?

EXAMINER BOJKO: Just so I'm clear, Mr. Petricoff, this isn't what's binding, you're saying do they have the authority.

MR. PETRICOFF: Do they have the authority to do it. I'm still focusing on this question about that this -- what this Commission can bind, you know, for a future period of time.

(Record read.)

Page 175

A. I believe that the Commission could authorize the company to go out and purchase power for returning customers regardless of what their portfolio was and flow that through the fuel clause, I don't necessarily think that that -- or, I do think that that could be changed by a future Commission.

MR. PETRICOFF: Your Honor, I have no further questions. Thank you.

Thank you, Mr. Baker.

EXAMINER BOJKO: Mr. Maskovyak?

MR. MASKOVYAK: Thank you, your Honor.

### CROSS-EXAMINATION

By Mr. Maskovyak:

Q. Good afternoon, Mr. Baker.

A. Good afternoon.

Q. I would like you to turn to page 3 and look at lines 3 through 5, basically the last sentence of that part of the testimony beginning with "There is no mention of the word prudently." Or there's only one mention.

EXAMINER BOJKO: I'm sorry, I cannot hear a word that you're saying, Mr. Maskovyak.

MR. MASKOVYAK: I'm sorry, I'll speak up.

Q. You say there is no mention of the cost

Page 176

of service and only one mention of the word "prudently." Do you see where I am?

A. Yes, I do.

EXAMINER BOJKO: Which page? I'm sorry.

MR. MASKOVYAK: Page 3.

A. Yes, I do. I see it.

Q. So by virtue of the fact that you state that the word "prudently" is only used once, does this mean that any cost or expense for which the companies seek reimbursement where it is not subject to 143(B)(2)(a) means it does not need to be prudent?

THE WITNESS: Could I have the question read back, please?

(Record read.)

A. What I believe is that the Commission as part of what has been proposed by Senate Bill 3 should approve the plan, or reject the plan, or modify the plan, and once you've done that, those are the rates that are in place for -- going forward for supply to customers. I don't think it falls under a prudency discussion at that point because it's approval of the plan.

Q. So does that mean the companies would be otherwise free to seek costs that may well prove to be imprudent?

44 (Pages 173 to 176)

Page 177

1 A. It's part -- again, I go back to the  
2 plan, and we put something in front -- it's compared  
3 to the MRO. If the General Assembly had wanted  
4 prudent to be the conditions of the plan, approving  
5 the plan, I think they would have put that language  
6 in.

7 Q. Can I take it from your answer that your  
8 answer is yes?

9 MR. RESNIK: Your Honor, I'll object. He  
10 gave his answer.

11 MR. MASKOVYAK: I'm not sure though  
12 whether it falls as a yes or no, your Honor.  
13 Truthfully, I don't know.

14 EXAMINER BOJKO: Mr. Baker, can you  
15 answer it any further?

16 THE WITNESS: No, I can't.

17 Q. (By Mr. Maskovyak) If a cost was found to  
18 be imprudent or thought to be imprudent that was not  
19 part of 143(B)(2)(a), is it the company's position  
20 that this would not be a bar to recovery?

21 THE WITNESS: Could I have that read  
22 back?

23 (Record read.)

24 A. I haven't thought through all of that  
25 because I've thought -- I've tried to think of this

Page 178

1 in the context of what we have put in front of the  
2 Commission as far as our plan is concerned, and the  
3 section you pointed to is the section that forms the  
4 general basis of our FAC which is clearly that's  
5 subject to the word "prudent." It's there.

6 The others are requests. I think the  
7 Commission has to look -- it's not asking for  
8 continued trueup of costs or anything. There are  
9 dollars we're asking for either in values that are  
10 defined in the plan, values that are automatic  
11 increases, purchased power. I think the Commission  
12 needs to look at that as part of the plan, not  
13 whether any single decision is prudent in their  
14 judgment.

15 Q. Thank you.

16 Staying with page 3 with the question and  
17 answer beginning on line 6 regarding the reasonably  
18 priced goals, are you with me?

19 A. Yes.

20 Q. In your answer would it be fair to say  
21 that you essentially define "reasonably priced" to  
22 mean that any amount that makes the ESP in the  
23 aggregate less than the MRO meets the definition of  
24 reasonably priced?

25 A. Yes, I think it would be.

Page 179

1 Q. Is the question of how much profit the  
2 company may make irrelevant to the question of  
3 reasonably priced?

4 A. Yes. Of course, subject to the  
5 significant excessive earnings test.

6 Q. Okay. Thank you. Let's turn to page 4.  
7 I'm going to look at the question and answer  
8 beginning on line 17 where you talk about the  
9 circumstances that would warrant the Commission  
10 modifying an ESP. Do you see where I am?

11 A. Yes.

12 Q. In your answer you discuss three  
13 possibilities, which you label as A, B, and C.

14 A. Yes.

15 Q. Is it my understanding that these are the  
16 only ways you believe by which the Commission may  
17 modify the ESP?

18 A. These were three that I thought of when I  
19 was writing the testimony. I didn't go any further  
20 than that.

21 Q. So is it possible there could be more  
22 ways or other ways than the three you enumerate?

23 A. I don't know.

24 Q. If the Commission did modify the ESP in  
25 the ways that you suggest, would it still be

Page 180

1 considered a modification by the companies such that  
2 you could decide to withdraw the application?

3 A. The question asks about modifying the  
4 ESP. That to me is by definition, therefore,  
5 modifying the ESP, which we then have the right to  
6 determine whether we want to accept it.

7 Q. Okay. Thank you.

8 I'd like now to turn to the Purchase  
9 Power Proposal section on page 5 with the question  
10 and answer beginning on line 11. I'd like you to  
11 look at the part of your answer beginning on line 15  
12 starting with the word: "Although the Companies  
13 propose to administer its slice-of-system purchases  
14 within the FAC mechanism the proposal was not made  
15 under that section and the Commission is not limited  
16 to that section in approving it." And I assume by  
17 "that section" you're referring back to the previous  
18 sentence in reference to 4928.143(B)(2)(a).

19 A. Yes.

20 Q. I know you were not in the room when  
21 Mr. Nelson was here testifying, but I believe in  
22 response to questions from OCC that Mr. Nelson  
23 testified that the company was, in fact, seeking  
24 recovery pursuant to 143(B)(2)(a).

25 MR. RESNIK: I'll object, your Honor. I

45 (Pages 177 to 180)

Page 181

1 think that Mr. Nelson's testimony just referred to  
2 (B)(2), he did not use the letter (a).

3 EXAMINER BOJKO: Let's ask the witness if  
4 he knows.

5 Can you respond to this question?

6 THE WITNESS: Certainly. That is, I  
7 think that's defined by my answer on line 18 carrying  
8 through line 22 that I consider it a two-step  
9 process, that the approval of AEP going forward and  
10 purchasing the 5, 10, and 15 from the market is just  
11 part of the overall plan. The flowing the results of  
12 that purchase then through the fuel clause are  
13 consistent with the 4928.143(B)(2)(a).

14 Q. All right. We may not need Mr. Nelson.  
15 Do you have a copy of the company's application?

16 A. Yes, I do.

17 Q. Can I get you to turn to page 4 and look  
18 at Roman numeral II.A, the Fuel Adjustment Clause?  
19 Perhaps you can clarify for me.

20 A. Yes, I see it.

21 Q. The first sentence starts: "As permitted  
22 by 4928.143(B)(2)(a), Ohio Revised Code, the  
23 Companies propose implementing an adjustment  
24 mechanism" and so forth. And if you continue on in  
25 that section and slide over to page 5, in the second

Page 182

1 bullet point it talks about the purchased power costs  
2 that are part of this mechanism, as I understand it.

3 A. All I can do is point you back to my  
4 testimony because it talks about two proposals. That  
5 is the area where we recover the cost. That's not  
6 the approval of whether we can make the 5, 10, and  
7 15 percent purchase as part of the plan.

8 Q. So the bullet point at the top of page 5  
9 is not connected to the beginning of that particular  
10 part that says that this is pursuant to 143(B)(2)(a).

11 A. Recovery of. It's two steps in this  
12 process. I don't know how I can be more clear about  
13 that.

14 Q. All right. Can you then tell me what  
15 section you are relying on?

16 A. I'm terrible with these numbers in this  
17 legislation, but it's the whole ESP section.

18 Q. I'm not sure what you're referring to,  
19 sorry. When you say "the whole ESP section" --

20 A. That's fine. I'll go through the  
21 legislation.

22 EXAMINER BOJKO: Section 143, is that  
23 what you're talking about?

24 THE WITNESS: Let me look it up.

25 Q. Is there a statutory section to which you

Page 183

1 are specifically citing for the proposition that it's  
2 not (B)(2)(a) but something else?

3 A. I'm looking. It's 4928.143(B)(2).

4 Q. But none of the underlying subsections  
5 apply.

6 A. There are words that say the plan may  
7 provide for or include without limitation any of the  
8 following.

9 Q. I understand. And your proposal, can it  
10 be found in any of the following subsections?

11 A. It was really intended to fall under the  
12 "without limitation" provision.

13 Q. Is the recovery for which you are seeking  
14 on this fuel cost a cost that could be sought under  
15 (B)(2)(a)?

16 MR. RESNIK: Your Honor, could I have the  
17 question read back, please?

18 EXAMINER BOJKO: Yes.

19 (Record read.)

20 MR. RESNIK: Well, I guess I'm going to  
21 object because I think now we're switching from the  
22 purchased power to fuel. Sort of leaves me in the  
23 dust, but ...

24 MR. MASKOVYAK: I'm happy to go with  
25 purchased power.

Page 184

1 A. I look at (a) to be the recovery  
2 mechanism for the costs the company incurs in these  
3 specific areas in supplying the SSO. If we were to  
4 say it's covered under that section, then everyone  
5 who is saying you have to make these -- purchased  
6 powers has to be a least-cost plan could use that as  
7 a reason to deny the 5, 10, 15 purchase because they  
8 may not believe it's the least-cost plan, and we've  
9 taken the position that it is under the "without  
10 limitation" that we're asking for the approval, and  
11 we show that in the aggregate it's better than the  
12 MRO.

13 Q. I understand that. My question still is,  
14 though, could you seek recovery for those same costs  
15 pursuant to (B)(2)(a)?

16 A. No, and accomplish what we were trying to  
17 accomplish as part of this plan.

18 Q. And what is it you are trying to  
19 accomplish?

20 A. A plan in place that is better in the  
21 aggregate than the MRO and provides what I believe to  
22 be a good arrangement for customers and the company.

23 EXAMINER BOJKO: So could the purchases  
24 be at any cost?

25 THE WITNESS: No. I'm asking the

46 (Pages 181 to 184)

Page 185

Commission to approve the authority to buy 5, 10, and 15 and put it in the portfolio. Then when we actually execute on it, I would expect as part of the fuel clause that there would be a prudence and there would be a check, did, in fact, we go out and acquire it in the best fashion and the lowest cost to make those purchases, not in comparison to what the energy supply of our own system is.

EXAMINER BOJKO: So the prudence check would still be on the cost that you purchased it at, not maybe necessarily the execution of the purchases, which is what your line 21 says.

THE WITNESS: Well, I think it's the execution of, your Honor, not the cost, because if we're allowed to do it and we go out and -- we're given the authority to go out and make the 5, 10, 15 percent purchases, just because it comes in with a specific number is going to be relevant to whether we -- what the market set the price at. We have to show that we, in fact, did a good job of acquiring it in the market and got it in the most efficient manner from the market.

EXAMINER BOJKO: But the cost would be a factor in that consideration of whether the total execution was prudent or not.

Page 186

THE WITNESS: I think cost compared to what an alternative cost could be for a purchase, yes, so if we didn't do the execution right.

EXAMINER BOJKO: Thank you.

Q. (By Mr. Maskovyak) Following up on the Bench's question, but whether, in fact, the purchase itself is prudent is not a relevant question.

A. I believe that if it's accepted as part of the plan, it is prudent to go ahead and make the 5, 10, 15 purchase.

Q. Let's factor out -- I know you said that you could not have included the cost in (B)(2)(a) and accomplish the purpose of your plan, which was to make the ESP better in the aggregate. Factoring out the part about not accomplishing the purchase, just a question of whether it's possible legally within the confines of the statute, could the companies have requested for recovery pursuant to (B)(2)(a)?

A. I don't know.

Q. Let's look at other components of (B)(2)(a). Let's drop down to the last part of it where it talks about the cost of federally mandated carbon or energy taxes. If the company were to seek recovery for those, could you seek recovery and do so without using (B)(2)(a)?

Page 187

A. I'm sorry, I'm trying to find where you are in the --

Q. I'm in the same place.

A. You're still in (B)(2)(a). I'm sorry.

Q. Correct.

A. Okay.

Q. I just dropped down to the very last clause of (B)(2)(a) where it talks about various components that could be included as part of the recovery pursuant to (B)(2)(a), and the last one is the cost of federally mandated carbon or energy taxes.

My question was, could the company seek recovery of those costs but do so without using (B)(2)(a) as its way to do so?

A. I guess we could under the "without limitation," but I don't know why we would.

Q. Well, wouldn't you, in fact, avoid any prudence review if you decided to avoid using (B)(2)(a) and use the "without limitation" exception that you cite?

A. I think I've mentioned any number of times now that I'm not avoiding the prudence review by the -- I am subject to a prudence review on the 5, 10, 15, as far as the execution of the purchase. I'm

Page 188

asking for approval of the part of the plan which says the company is allowed to go out and buy 5, 10, 15 percent and add it to its portfolio.

I don't see a parallel to the cost of federally mandated carbon or energy taxes. That is going to be something that the government imposes, and we're going to ask for recovery very different than a part of the pieces of the plan that we put in to make up our ESP.

Q. I understand. I'm merely asking that if you decided to seek recovery for those costs, could you use the "without limitation" language to seek recovery by not using (B)(2)(a)?

A. I don't know, and we wouldn't. I don't think we plan on doing it that way.

Q. Okay. Thanks. Let's look at page 5. I want to turn your attention to page -- or, lines 18 through 22, and you talk about the purchases -- back to your two-step process that you have already previously discussed.

A. Yes.

Q. Do I understand you to say that the ESP contains the company's percentages, the 5, 10, and 15, and that is, if the ESP is more favorable than the MRO, then the PUCO must allow the 5, 10, 15

47 (Pages 185 to 188)

Page 189

1 percentages?

2 A. I'm saying that they should approve it if  
3 in the aggregate it is better than the MRO, the  
4 Commission will look at our ESP and decide to  
5 approve, modify, or reject.

6 Q. And so since you're not using (B)(2)(a),  
7 the Commission has no authority to examine prudence  
8 regarding whether there should be a purchase or what  
9 percentage that purchase should be.

10 A. I believe that they have the ability,  
11 just as I described, to review our plan and make the  
12 three potential decisions, and then it will be up to  
13 the company to decide how they react to either a  
14 modification or a rejection.

15 Q. I understand. But I'm asking  
16 specifically about this clause. Since you're not  
17 using (B)(2)(a), am I to understand that because of  
18 that it's the company's position that the Commission  
19 has no authority to examine prudence regarding  
20 whether there should be a purchase or what percentage  
21 that purchase should be?

22 A. You know, I've said it a couple of times  
23 and I'll use it again, I don't tell the Commission  
24 what they can and cannot do. I'm suggesting that  
25 they -- the company's position is they should approve

Page 190

1 it if, in fact, it's better in the aggregate than the  
2 MRO.

3 Q. Thank you, Mr. Baker.

4 Can we turn to page 9? I was looking at,  
5 and I would have you look at lines 5 and 6 where you  
6 state: "By contrast, it is no longer certain that  
7 the regulatory compact exists in Ohio given the  
8 passage of Senate Bill 221." Are you saying that the  
9 compact is dead?

10 A. I'm saying that in the case of generation  
11 the company has no assurances that when they make an  
12 investment in generation-related items, that there  
13 would be recovery over the life of the items which I  
14 consider to be part of the regulatory compact.

15 Q. If there is no regulatory compact now,  
16 can you tell me what there is?

17 A. There's Senate Bill 221.

18 Q. And what does that mean in terms of a  
19 regulatory compact --

20 A. I think --

21 Q. -- or replacement?

22 A. Sure. I think what it says is we're no  
23 longer certain, and we'll know what it is when we  
24 start to get some Commission orders.

25 Q. Would you say that Senate Bill 221, then,

Page 191

1 really replaces or says that we no longer, or that  
2 you, the companies, no longer have a duty to serve?

3 MR. RESNIK: Is this limited to  
4 generation?

5 MR. MASKOVYAK: Yes.

6 A. No. I think this says, just as we've  
7 laid out in the testimony, that we have an obligation  
8 to supply customers generation at an SSO rate.

9 Q. Okay. Thank you.

10 I'd like to turn to page 10, and I want  
11 to take a look at your chart at the bottom of the  
12 page. I was noticing in reviewing the chart that the  
13 time periods that you cite throughout are not  
14 equivalent time periods. The months range  
15 dramatically at times. The first block is five  
16 months I believe in '01. The second block is three  
17 months. The third is ten months. The fourth is nine  
18 months. The fifth is seven months. And the sixth is  
19 three months. Can you explain to me why such a  
20 radically divergent range of months was decided to be  
21 put in the chart?

22 A. Certainly. All we were trying to deal  
23 with was the statement that the OCC witness made,  
24 which is that the changing price over that two months  
25 was an unusual event and, therefore, that's the

Page 192

1 reason why you ought to use market quotes, and we  
2 just wanted to show that, in fact, it is not an  
3 unusual event for prices to move dramatically, simple  
4 as that.

5 Q. Wouldn't it be better to compare standard  
6 time periods as opposed to having a wide range of  
7 time periods?

8 A. No.

9 Q. Why not?

10 A. Because it's intended for one purpose,  
11 and the purpose is to show that there is volatility  
12 in prices and that period was not unique.

13 Q. Can you explain to me, for example, then,  
14 in the first period it goes through July 2001 but the  
15 second period yet starts in July 2001 and includes  
16 the same period of time; that same example is  
17 replicated in periods five and six. So is July '01  
18 included both in the change downward as well as  
19 included in the change upward?

20 A. Yes.

21 Q. How does that help us understand?

22 A. It just shows that for one period, March  
23 through July, it went down 47 percent, and then  
24 looking at what it went down to in July, it turned  
25 around between July and September and went back up to

48 (Pages 189 to 192)

Page 193

Page 195

33 percent. Those are significant changes in price, as I see it, and I think that is consistent with what OCC's witness was saying about that, there is volatility in this market.

Q. I would like to turn to page 13. On the previous page, 12, you start talking about the POLR risk and Mr. Cahaan's testimony, and then at the top of page 13 in lines 1 through 4 you start talking about the migration risk.

A. Yes.

Q. So for the company's POLR, the provider of last resort, is more -- is a charge that reflects more than just what that term reflects, which is a provider of last resort.

MR. RESNIK: Can I have that question read back, please?

(Record read.)

A. In my view the POLR -- the provider of last resort is the series of options that are provided to customers, the right to leave the customer's tariff and go back -- the SSO tariff price and go to the market when it's economically attractive and then come back to the SSO rate when that's economically attractive. That's my definition of POLR.

than it has been since Senate Bill 3 was enacted?

A. Help me, please, here. Are we talking about the migration risk, my definition of the right for a customer to leave?

Q. Yes.

A. I would say that the migration risk -- I'm sorry, I'm not going to use that term. You took me down to almost using that.

Q. I'm using that term because you use it in your testimony.

A. But I use it in context of what we did, and that's ebb and flow, that's not a customer who's leaving because it's economically advantageous.

When I talk about people leaving because it's economically advantageous, today I would say the risk of customers leaving is probably a little less than it was at the time of Senate Bill 3, but I don't know that that would be the case tomorrow.

Q. Okay. Thank you.

Let's look at page 14. You talk about the aggregator and the problems associated with aggregation. Actually, if I may, why don't I turn you back to page 13 because you really start addressing this issue in the last sentence at the bottom on line 23 beginning with "While governmental

Page 194

Page 196

Q. So it covers -- as you state in your testimony, it covers the migration risk out.

A. Now we're getting complicated because we're talking about migration risk and whose definition of migration risk. I told you what my definition of POLR was so if we could stay within that definition, it might make life easier for me.

Q. Well, I'm trying to understand since most people define the POLR risk or the provider of last resort risk the risk that you may have to serve additional customers for which you're not prepared to serve. You're saying it includes that plus much more.

A. I'm saying it includes the rights of customers -- my definition and what was intended as part of our ESP, that is a charge associated with the option that's provided to customers for both the right to leave and the right to come back.

Q. So it also covers the competitive risk.

A. Well, isn't that all a competitive risk?

Q. Possibly. You're not providing anything, though, to the customer who leaves.

A. The customer has the right to come back.

Q. I understand that.

Is the migration risk today any different

aggregations could notify," and it continues on through line 5 on page 14. Am I to understand from your testimony there that the companies believe that aggregators are not likely to give notice of the risk to customers?

MR. RESNIK: Can I have that read back.

EXAMINER BOJKO: Yes.

(Record read.)

MR. RESNIK: I guess I would object, your Honor. The notice the statute contemplates is notice to the company, not notice to customers.

EXAMINER BOJKO: I think he might be asking that very question.

THE WITNESS: Could we have it read back? (Record read.)

A. I don't think they give notice -- I don't know whether they'll give notice of the risk to customers. I'm not going to assume what a government aggregator will do.

Q. But it is your belief that if customers understood the financial exposure, they would not go with aggregators.

A. No, I don't think that's what this says.

If I were a customer and some aggregator came to me and said, "You've got a choice of going with me,

Page 197

Page 199

1 because it's economically advantageous, and paying a  
2 POLR charge so if the market goes crazy and I have to  
3 stop serving you, you can go back to the company at  
4 an SSO rate," I'd say don't give them the notice that  
5 I want to avoid the POLR charge. I think most people  
6 would think that was a cheap option.

7 Q. So you're suggesting that the aggregators  
8 will deceive.

9 A. I think I said that I didn't know what  
10 the aggregator -- I'm saying that if they do the  
11 following things, this is how I think customers would  
12 react.

13 Q. You also state that you're not sure that  
14 customers would understand the risk or the financial  
15 exposure, I think is the term you use.

16 THE WITNESS: Can I have that read back?  
17 (Record read.)

18 MR. RESNIK: Is that a question?

19 EXAMINER BOJKO: He was asking about his  
20 statement on 3 and 4.

21 I think you were just asking if that's  
22 what he said; is that right?

23 MR. MASKOVYAK: (Nods head.)

24 A. That's not what it says.

25 Q. So you believe they will understand the

1 A. What I said was -- you asked me whether  
2 the risk was greater, and I said I thought the risk  
3 was slightly less. It had no implications of whether  
4 there's a market or not a market.

5 Q. And why would the risk be slightly less?

6 A. Because the delta between market price  
7 and the SSO is different.

8 Q. So you believe that there are ample  
9 providers available whom customers can switch to.

10 A. I believe there are current opportunities  
11 for customers in the PJM arena, and then for  
12 customers who can't access PJM, if it was  
13 economically advantageous, I believe there would be  
14 aggregators who would come in and attempt to serve  
15 those customers.

16 Q. Would you care to opine about the  
17 likelihood of those options?

18 A. It will all depend on the relative price  
19 in the market to the relative SSO price, and the  
20 closer they become, the more likely it is to happen,  
21 and that's why we're looking at it and dealing with  
22 it before the fact rather than dealing with it when  
23 it actually happens.

24 Q. When you valued this option of the right  
25 to switch, which I assume takes into account the fact

Page 198

Page 200

1 risk if properly presented.

2 A. If customers are provided the  
3 information, yes, I believe they'd understand the  
4 risk.

5 Q. All right. I want to stay with this page  
6 and slide down to the next question that begins at  
7 line 14 where we're talking about -- and then if you  
8 look at that question and your answer beginning on  
9 line 18 talking about: "The value of the customer's  
10 right to switch under Senate Bill 221 comes from the  
11 option customers are given." Does the option include  
12 the value if there are no realistic options to pursue  
13 in the market?

14 A. Well, I can't accept your premise that  
15 there are no realistic options.

16 Q. How about if there are few realistic  
17 options?

18 A. I think that if it becomes economically  
19 advantageous, there will be options for customers.

20 Q. I understand. Did I not hear you say a  
21 little while ago that you believe, if anything,  
22 there's less of a market today than there was in the  
23 years since Senate Bill 3 was enacted?

24 A. No, I didn't say any such thing.

25 Q. Can you tell me what you did say?

1 that you have lost sales as part of that equation,  
2 does the value of the option also include the fact  
3 that the companies will have excess power to sell  
4 even if the market price of that power at that point  
5 in time is less than the SSO?

6 A. This is the value to customers of being  
7 able to access the market as opposed to the SSO when  
8 it's economically advantageous. It doesn't look at  
9 what happens to the freed-up generation for AEP, but  
10 the freed-up generation would then be available to  
11 sell in the market at the same kind of rates the  
12 customers would be paying.

13 Q. And so I take it that the value of the  
14 option also does not necessarily include whether AEP  
15 chooses to buy any kind of insurance, for lack of a  
16 better term, to hedge their risk of the customers  
17 leaving.

18 A. We're setting this up based on the  
19 Black-Scholes model determining what the value of the  
20 options are and the risks that the company has. The  
21 company will decide over the period of the ESP  
22 whether to execute on options in order to hedge its  
23 risk or not. That's the company's decision.

24 Q. Do I understand that it's still true  
25 today that the company has not made a decision about

50 (Pages 197 to 200)

Page 201

Page 203

1 whether they will purchase any hedges to this risk?

2 A. That's correct, we haven't made any  
3 decision.

4 Q. So it is possible that the companies will  
5 assume the full risk.

6 A. That is a decision the company makes, and  
7 if they do, that's their risk that they absorb.

8 Q. But this is not the same kind of risk  
9 that you would be willing to offer the customer.

10 A. I don't think there are customers out  
11 there who are willing to say to us we will not buy  
12 SSO service, so I don't see how you'd do it.

13 EXAMINER BOJKO: I'm sorry, you said you  
14 don't think there are customers?

15 THE WITNESS: No, I don't. I think that  
16 we haven't had people leave, and I don't think people  
17 are going to say just to avoid the POLR, I'll  
18 guarantee you that I will not buy power from you for  
19 the full ESP period.

20 Q. Can we turn to page 15? I'm looking at  
21 your testimony on lines 14 through 17 beginning with  
22 the word "finally."

23 A. Yes.

24 Q. I assume you're not conceding that the  
25 risk of switching is low here.

1 against risks, even if they're small, because the  
2 ramifications could be great.

3 THE WITNESS: Can I have that question  
4 read back?

5 EXAMINER BOJKO: Yes.

6 (Record read.)

7 A. What I'm saying is that I can't agree  
8 with other people's positions, as I see it, to ignore  
9 the risks. We have chosen not to ignore the risks or  
10 the value of the option by including the POLR as part  
11 of our ESP proposal.

12 Q. If you choose not to buy POLR insurance,  
13 would that be ignoring the risk?

14 A. That would be managing the risk.

15 Q. Why would it be managed?

16 A. Because the company has under that  
17 proposed -- under our proposal the ability to decide  
18 whether to hedge or not hedge, and that is a business  
19 call for the company.

20 Q. And is that because they will have the  
21 revenues generated by POLR on which to make a  
22 decision about whether they should just hold on to  
23 those versus -- and assume the risk by holding on to  
24 those versus taking that money and purchasing a  
25 hedge?

Page 202

Page 204

1 A. I just saying it's not -- I don't think  
2 it's a good idea to ignore risk.

3 Q. So are you saying that we must set the  
4 POLR rates high in order to guard against an unlikely  
5 risk because, although it's unlikely, the risk may  
6 still be very great?

7 A. I make no representation the POLR risk is  
8 being set high.

9 Q. Are you saying that the POLR risks or  
10 rates are set where they are according to the company  
11 because they have to guard against this unlikely risk  
12 even though it's unlikely because the risk may well  
13 be great?

14 A. Look, I'm not suggesting that the risk is  
15 great or not. I'm talking about assertions that  
16 others are making.

17 Q. Aren't you saying beginning at line 16  
18 that the lesson is that the losses can be great by  
19 not hedging against unlikely risk? Isn't that your  
20 assertion?

21 A. I'm saying that I don't think it's a good  
22 idea, as others have suggested, to just not look at  
23 risk because right now they think the likelihood is  
24 small.

25 Q. So you are saying that we must guard

1 A. The rates will be the rates, and they  
2 will be what is approved under the -- an ESP that we  
3 effectively decide to accept. That's the premise my  
4 question is -- my answer is going to be working on.  
5 And in that case then we determine how to manage our  
6 costs under the rates that we have.

7 Q. I'd like to turn to page 16. I'm looking  
8 at your answer that begins at line 3. If you'd like  
9 to review the question that begins on the prior page  
10 down at line 21, feel free to do so, starting with  
11 "Certain intervenors." I want to concentrate on that  
12 part of your answer that begins on line 6 that talks  
13 about the put position.

14 A. Yes.

15 Q. You say you can't use the FAC because it  
16 ignores the put position. What is the value of that  
17 part of the position?

18 MR. RESNIK: Your Honor, if I may, I just  
19 note the testimony says the put "portion."

20 MR. MASKOVYAK: I'm sorry, put portion.

21 THE WITNESS: Can I have the question  
22 read back?

23 (Record read.)

24 A. I'm not sure I understand the question.  
25 Are you looking for what the dollar value of the

51 (Pages 201 to 204)

Page 205

1 total POLR --

2 Q. Or what percentage of the POLR risk is  
3 assigned to the put portion.

4 A. It's in the neighborhood of 90 percent.

5 Q. 90 percent. So I guess it would be fair  
6 to say from the company's position that the risk is  
7 much greater of customers leaving than returning?

8 A. No. That's not true.

9 Q. Okay. Then help me understand how the  
10 90 percent rate -- what the 90 percent ratio  
11 reflects.

12 A. It's the result of running a  
13 Black-Scholes model comes out with those kind of  
14 ratios. A simple way to think about it is that  
15 the -- you only exercise the call, the second part,  
16 if you've exercised the put. So you have to achieve  
17 the put before you can achieve the call, and so you  
18 have to have the price go down below the SSO and then  
19 go up again above the SSO. And when you run that  
20 through the model, it puts the majority of the value  
21 of the risk in the put.

22 Q. I think that answers my question. Thank  
23 you.

24 All right. Let's turn to page 19, and I  
25 don't have a specific section, although I'm largely

Page 206

1 looking at the last part of that page, lines 13  
2 through 19. If you'd like to review that first.

3 A. Okay, I've read it.

4 Q. Would it be fair to say that it's the  
5 company's belief that the Black-Scholes approach was  
6 the most accurate way to determine POLR?

7 A. It was the best way to -- yes, to  
8 determine the value of the combination of options  
9 that we have been talking about.

10 Q. And I think we agreed previously in your  
11 direct testimony that you knew of no one, and no one  
12 else did, of any utility using the Black-Scholes  
13 model to apply a POLR; is that correct?

14 A. When we talked about this in my direct, I  
15 said there wasn't another utility outside of Ohio  
16 that had the same kind of POLR risk.

17 Q. And, consequently, no other utility is  
18 using the Black-Scholes model?

19 A. Well, I don't know why you would do it if  
20 you don't have the risk.

21 Q. Have you found any literature, any  
22 academics that discuss using the Black-Scholes to  
23 calculate a POLR charge?

24 MR. RESNIK: Your Honor, I'm going to  
25 object. Mr. Baker's rebuttal testimony touches on

Page 207

1 two distinct features of the Black-Scholes model.

2 One is the use of the LIBOR rate, which he discusses  
3 from page 16 through 18 at line 19, and then he picks  
4 up the second question that had to do with a  
5 reference, and actually I think it was  
6 in Miss Medine's testimony, about having run the  
7 model an indeterminate number of times.

8 This is not a whole rehashing of  
9 Black-Scholes. We've limited it to two points that  
10 came up, and I think that the cross-examination  
11 should be limited in that sense.

12 EXAMINER BOJKO: I hope it's not a whole  
13 rehashing. I hope you're just trying to lay a tiny  
14 bit of foundation.

15 MR. MASKOVYAK: I'm almost done with  
16 this.

17 EXAMINER BOJKO: Thank you. Please  
18 proceed.

19 MR. MASKOVYAK: Could we reread the  
20 question?

21 (Record read.)

22 A. I don't know how there would be any. If  
23 I just finished stating that no one has the POLR  
24 risk, the EDUs don't have the POLR risk anywhere else  
25 and it just appeared in Senate Bill 221, the chance

Page 208

1 of somebody writing an article on that use is pretty  
2 slim. I would expect that they'll probably write  
3 some articles, assuming the Commission approves it.

4 Q. Fair enough. Thank you, Mr. Baker.

5 Can we turn to page 20, and yes, I'm  
6 almost finished. I'm looking at the question and  
7 answer that begins at line 1 but I want to  
8 concentrate where it begins at line 9 where you say:  
9 "Therefore, I think it is appropriate to include a  
10 provision in an ESP that provides an opportunity for  
11 recovery during the ESP period of generation costs  
12 that at this time are unforeseen and consequently  
13 unquantifiable." So you're saying in there that we  
14 don't know what these costs will be for generation.

15 A. I'm suggesting that is an alternative to  
16 setting up some kind of a tracker which is not part  
17 of our proposal. We are asking for automatic  
18 increases that I believe are provided for in the  
19 bill.

20 Q. And this is because you can't know what  
21 the amount of those costs are.

22 A. It's because we're permitted to have  
23 automatic increases.

24 Q. Well, don't you justify it here by saying  
25 that we can't know what those costs are?

52 (Pages 205 to 208)

Page 209

1 A. I don't think I need to justify it. I  
2 think we're allowed to put automatic increases in,  
3 and I'm just explaining the thought process of there  
4 are reasons to put automatic increases in. It is not  
5 cost based.

6 Q. So the question of whether those costs  
7 will even materialize is not relevant.

8 A. No.

9 Q. No, it is not relevant?

10 A. It's not relevant because the costs could  
11 be greater. So whether they're lesser or greater,  
12 this is not a cost-based rate, it is a proposal for  
13 an automatic increase.

14 Q. Consequently, it would not necessarily be  
15 appropriate to have any mechanism to provide for any  
16 unforeseen decrease in costs.

17 A. As I say, it's not cost based. It's a  
18 single value.

19 Q. Can you explain the difference to me for  
20 giving cost recovery that's not known or unforeseen  
21 and unquantifiable and essentially what I would call  
22 a blank check?

23 A. I'm not asking for cost recovery. I'm  
24 asking for an automatic increase that's provided for  
25 in Senate Bill 221.

Page 210

1 MR. MASKOVYAK: Thank you. I have no  
2 more questions, your Honor.

3 EXAMINER BOJKO: Let's go off the record.  
4 (Recess taken.)

5 EXAMINER BOJKO: Let's go back on the  
6 record.

7 Mr. Sites, do you have any  
8 cross-examination?

9 MR. SITES: I am pleased to report, your  
10 Honor, I have no questions. Thank you.

11 EXAMINER BOJKO: I guess we are to  
12 Mr. White.

13 MR. WHITE: Yes, just a few questions,  
14 your Honor.

15 ---

#### 16 CROSS-EXAMINATION

17 By Mr. White:

18 Q. Mr. Baker, I'm Matt White, and I  
19 represent the Kroger Company.

20 A. Yes, Mr. White.

21 Q. Just a few questions.

22 A. Certainly.

23 Q. Let me refer you to page 8 of your  
24 testimony.

25 A. Yes.

Page 211

1 Q. On page 8, the second question, you say:

2 "Witness Higgins and Kollen recommend the OSS margins  
3 be credited to the retail FAC." And you also cite  
4 4928.143(B)(2)(a), and you essentially say that OSS  
5 margins are not referenced in this provision and,  
6 therefore, they shouldn't be -- the credits shouldn't  
7 be included in the plan; is that correct?

8 A. I think you're shortening my answer  
9 significantly. I list quite a few reasons on pages 8  
10 and 9, that's just one of the reasons I list.

11 Q. I understand that, but you're saying that  
12 is one of the reasons you list, correct?

13 A. Yes.

14 Q. Okay. Do you have a copy of Senate Bill  
15 221 with you?

16 A. Yes, I do.

17 Q. Okay. I think you referenced this  
18 earlier in cross-examination, but can you read what  
19 4928.143(B)(2) says?

20 A. Are you talking about the sentence that  
21 says: "The plan may provide for, or include, without  
22 limitation any of the following"?

23 Q. Yeah.

24 A. Okay.

25 Q. That's what I'm talking about.

Page 212

1 A. I think I just read it.

2 Q. Okay. That's good.

3 And again, you referenced this earlier,  
4 the term "without limitation," what does that mean  
5 according to you?

6 A. That means, according to me, that the  
7 company may propose as part of its ESP any of the  
8 following, but we could put other things in the plan.

9 Q. Okay. Does that include crediting  
10 off-system sales to customers, off-system sales  
11 margins?

12 A. Are you saying would we be precluded from  
13 doing that?

14 Q. Yes.

15 A. The answer is no, we would not be  
16 precluded. That would not be an appropriate thing to  
17 do.

18 Q. I'm just addressing how you had said in  
19 your testimony that off-system sales weren't included  
20 in 4928.143(B)(2)(a). That's all. I wasn't asking  
21 whether or not they were included.

22 Okay, I'd like to move to page 14 of your  
23 testimony.

24 A. Yes.

25 Q. On page 14 you state: "It is my

53 (Pages 209 to 212)

Page 213

1 understanding that this current Commission can not  
2 bind some future Commission which would have to  
3 decide whether the Companies could flow through their  
4 FAC the market price costs of serving the loads of  
5 returning customers." Is that correct?

6 A. I believe that's what that says, yes.

7 Q. Are you aware whether the companies  
8 proposed to defer generation charges that exceed  
9 15 percent per year, whether or not the companies  
10 have proposed that?

11 THE WITNESS: Could I have the question  
12 read back?

13 (Record read.)

14 A. What the companies proposed was to defer  
15 FAC costs if the -- in order to limit increases to  
16 customers not on G, but on total bill to  
17 approximately 15 percent by customer class.

18 Q. And is it your understanding that those  
19 deferrals will be collected after the ESP period, the  
20 proposed three-year ESP period is over, by the  
21 company?

22 A. AEP's proposal would be to defer the FAC  
23 charges, as I described, and to collect it in a  
24 number of years after the ESP is completed.

25 Q. Okay. You also state that -- and this

Page 215

1 Q. Okay.

2 A. You're reading words in there that aren't  
3 there. The intent, and it may not be clear, but the  
4 intent was to deal with the fact that people have  
5 made the premise that we don't have a POLR risk  
6 because we could go out and purchase power in order  
7 to serve any customer that returns, regardless of  
8 what our portfolio is. And that's what I'm  
9 suggesting I don't think this Commission would bind a  
10 future commission on, not about running it through  
11 the fuel clause, but that decision. Then once they  
12 change that, then you have impacts in the FAC.

13 Q. Okay. After that line we were referring  
14 to earlier you state: "This concern is particularly  
15 acute since Mr." -- I don't know how to pronounce his  
16 name.

17 A. Mr. Cahaan.

18 Q. -- "Mr. Cahaan's suggestion would result  
19 in non-shopping customers subsidizing customers who  
20 did shop and then returned to the Companies' SSO."  
21 Would you say the companies' POLR proposal -- under  
22 the companies' POLR proposal, would nonshopping  
23 customers be subsidizing shopping customers?

24 A. No.

25 Q. Okay. If that's not the case, then would

Page 214

1 is, just so we're clear for the record, this is in  
2 regards to the proposal that would charge -- would  
3 allow AEP to recover costs after the ESP period is  
4 over for customers that are switching. Is that your  
5 understanding of that testimony?

6 A. No, it really isn't. What this is is  
7 dealing with a proposal that others have made that if  
8 a customer were to shop and then wanted to come back,  
9 that the company could go out and purchase power.  
10 That's what I'm talking about, that the Commission  
11 could in the future decide not to use that as the  
12 mechanism to deal with customers who were returning.

13 Q. But when you're referencing, "It is my  
14 understanding the current Commission can not bind  
15 some future Commission which would have to decide  
16 whether the Companies could flow through their FAC  
17 the market price costs of serving the loads of  
18 returning customers," that flow-through is meaning  
19 the Commission can't bind -- or the Commission can't  
20 bind a future commission from requiring that the  
21 company recover the money that they pay for  
22 purchasing power for customers that have shopped; is  
23 that correct?

24 A. You're missing the point that I'm trying  
25 to make.

Page 216

1 you say that under the company's POLR proposal  
2 that -- let me clarify before I ask this question. I  
3 forgot to clarify. First, this line of questioning  
4 I'll be talking about is the put option, and the put  
5 option is to cover the risk of customers leaving. So  
6 would you say that customers will only shop or  
7 exercise their put option when the electric market,  
8 the cost of electricity, is below the ESP price, or  
9 in the money, as they would say, in finance terms?

10 A. The assumption built into our modeling is  
11 that the customers would exercise it when it was  
12 economically advantageous. By that I mean that the  
13 price in the market was lower than the SSO price.

14 Q. Okay. So you're saying that the  
15 proposal, the POLR risk proposal, would not  
16 subsidize -- the company's POLR risk proposal would  
17 not cause nonshopping customers to subsidize shopping  
18 customers; is that correct?

19 A. That's correct.

20 Q. Okay. Also, along those lines, would you  
21 say that the company's POLR risk proposal would cause  
22 shopping customers to subsidize the company?

23 MR. RESNIK: Can I have the question read  
24 back, please?

25 (Record read.)

54 (Pages 213 to 216)

Page 217

1 A. No.

2 Q. Okay. Now, I'm going to get into a  
3 hypothetical here, and if you don't follow me, then  
4 I'll clarify. But if I'm a writer of a put option,  
5 and I sell that put option to you and the holder of  
6 that -- in the security underlying that put option  
7 and the value of that security goes down and the  
8 holder of that put option after the value of that  
9 security goes down chooses not to exercise that put  
10 option when it's in the money, quote/unquote, would  
11 you say that's in the economic best interest of the  
12 holder of the put option?

13 A. I need -- it would help me if we could  
14 work in a little bit more concrete terms, and let's  
15 try to do it around -- let's just create a  
16 hypothetical example. So let's assume that the  
17 tariff price is \$50. I would assume --

18 Q. Well, this hypothetical is not energy  
19 prices. We're talking about stock prices which  
20 traditionally options are written under. We're  
21 talking about a stock option.

22 A. But -- okay.

23 Q. Okay.

24 A. All right.

25 Q. So if I write a put option for \$50 or a

Page 218

1 stock price at \$50, the stock price goes down to \$40,  
2 the stock option would be in the money, meaning that  
3 when the person who holds the option exercises the  
4 option, they'll have a right to sell to the writer of  
5 the option the price at \$50, correct?

6 A. Correct.

7 Q. So if the person who does not exercise  
8 the put option when it's in the money --

9 A. Which person?

10 Q. The holder of the option.

11 A. So the person who could put it to the --  
12 the product to the writer at 50.

13 Q. Yeah.

14 A. Okay.

15 Q. Would that be in the economic best  
16 interest of that person not to exercise that option  
17 when the stock price is at 40?

18 A. No; I would think it would be in their  
19 economic interest to do that.

20 Q. Similarly, when the market price goes  
21 below the ESP price, it's in the economic best  
22 interest of customers, correct --

23 A. Yes.

24 Q. -- to switch?

25 A. Yes.

Page 219

1 Q. Okay. So would you say that if the  
2 holder -- and this is back to the stock option  
3 example, the holder of the put option does not  
4 exercise that option when it's in the money, it's a  
5 windfall for the writer of the put option.

6 A. No.

7 Q. Why is that?

8 A. There was a transaction that the parties  
9 agreed to, and the fact that the other party decided  
10 not to exercise it, it's not a windfall. He agreed  
11 to sell the option.

12 Q. Okay.

13 A. Just part of the transaction.

14 Q. Yeah, but part of the assumption under  
15 your option pricing model is that all holders of  
16 options will act in their economic best interests and  
17 would at all times.

18 A. Okay.

19 Q. Would it not be in the holder of the put  
20 option's best interest to exercise the put option  
21 when it's in the money?

22 A. Yes.

23 Q. Okay. So then I'm not understanding the  
24 why is it not a windfall if the actor has to act --  
25 or has to act in his economic best interest, the

Page 220

1 model price of the option in a way that the actor is  
2 acting in the economic -- will act in the economic --  
3 in his economic best interest and then he doesn't act  
4 in his economic interest, why is it not a windfall to  
5 the company, or to the writer of the put option?

6 A. I'm just having trouble understanding  
7 what -- what you mean by the term "windfall." Would  
8 they have -- would they, in fact, have had a result  
9 that was more attractive to them than they would have  
10 if they exercised the option? Yes, I would agree  
11 with that.

12 Q. Windfall meaning that that scenario was  
13 not priced into the option price. The option price  
14 was not -- did not take into account the fact that  
15 the holder of the option would not -- the holder of  
16 the option would not exercise the option when it's in  
17 his economic best interest to do so.

18 A. The price was set based on the fact that  
19 the person had that option. That's why I won't call  
20 it a windfall. It was the transaction. Would the  
21 person who had written the put be more economically  
22 advantageous than he would if the party who had the  
23 put exercised it? Yes.

24 Q. Okay. Let me explain it to you slightly  
25 differently, then. It's understandable that when

55 (Pages 217 to 220)

Page 221

1 someone writes a put option they're taking the risk  
2 that the stock will go down and the option will be in  
3 the money, therefore, they'll have to pay out. Part  
4 of the benefit is that the stock goes up and they  
5 don't have to pay out and they get to keep the cost  
6 of the option that's paid to them.

7 So the benefit that they receive is  
8 included in the option-pricing model. However,  
9 what's not included in the option-pricing model is  
10 when the stock price goes down and the option is in  
11 the money, and the holder of the option doesn't  
12 exercise the option, even though it's in his economic  
13 best interest to do so.

14 MR. RESNIK: Your Honor, I'm going to  
15 object. I don't think it was a question. It sounded  
16 like testimony.

17 MR. WHITE: I'm trying to clarify my  
18 position.

19 EXAMINER BOJKO: Do you have a question?

20 MR. WHITE: Yeah.

21 Q. Is that true?

22 THE WITNESS: I didn't hear a question in  
23 there, but we could try it again.

24 EXAMINER BOJKO: I think the question  
25 was, is that true? Do you need to hear the "is that

Page 223

1 couple more questions. When the exercise -- this may  
2 have been answered already, but just to clarify  
3 again, when the company created the Black-Scholes  
4 model, or whatever, they were under the assumption  
5 that customers will switch when it becomes in their  
6 economic best interest, i.e., meaning that customers  
7 will switch when the market price goes below the  
8 strike price or the ESP price; is that correct?

9 MR. RESNIK: Your Honor, a couple of  
10 objections. Regrettably, the company didn't create  
11 the Black-Scholes model, but beyond that, as I  
12 indicated earlier in an objection, the testimony on  
13 rebuttal that Mr. Baker has on the Black-Scholes  
14 model is very limited to two points, and, again, it  
15 sounds to me that we're getting back into a rehashing  
16 of the Black-Scholes model.

17 EXAMINER BOJKO: Well, again, I think  
18 that -- I hope that I'll give the same courtesy as I  
19 have extended to everybody else today and allow  
20 Mr. White a little bit of leeway to give some  
21 foundation.

22 But I don't think you meant to imply that  
23 the company or Mr. Baker here created the  
24 Black-Scholes model because he obviously didn't win  
25 the Nobel Peace Prize.

Page 222

1 true" statement part?

2 THE WITNESS: I have to.

3 EXAMINER BOJKO: Can you review that,  
4 please, Maria?

5 A. Let me try to answer it without trying to  
6 shortcut this. I will agree with you that the option  
7 modeling, as you describe it, doesn't value a person  
8 who does not do what is economically advantageous.

9 Q. Okay. So when the person doesn't do  
10 what's economically advantageous, it's a windfall to  
11 the writer of the option.

12 A. Okay. We're going to -- how many times  
13 are we going to talk about whether it's a windfall or  
14 not? I've answered that question three or four  
15 times, and I told you I'm not willing to term that a  
16 windfall. If you want to ask me five more times, we  
17 can do that.

18 Q. Okay.

19 EXAMINER BOJKO: But then you might get a  
20 nasty answer.

21 MR. WHITE: So I shouldn't ask that  
22 question again, is that what you're trying to say?

23 EXAMINER BOJKO: I don't think the  
24 answer's going to change. How about we move on.

25 Q. Okay. One more question, or maybe a

Page 224

1 MR. CONWAY: It's not a peace prize.

2 MR. WHITE: I would withdraw that.

3 EXAMINER BOJKO: I think what you were  
4 trying to say is that when the company decided to  
5 use the model, these are the assumptions that they  
6 made.

7 MR. WHITE: Yeah.

8 EXAMINER BOJKO: Is that what -- can you  
9 answer it, or do you need him to rephrase the entire  
10 question?

11 A. I'll try again. The use of the  
12 Black-Scholes model, as I said, doesn't build in a  
13 customer who does not take the economic option, but I  
14 would say that that doesn't discount the use of the  
15 model, number one, or necessarily say the number is  
16 wrong because in doing it, as we've told you, we took  
17 a lot of conservative approaches on the other side  
18 which kept the POLR down.

19 So there are balancings, for example, the  
20 fact that we used a single ESP price rather than  
21 increasing it for the price of the ESP for each of  
22 the three years, which would have driven it up  
23 significantly higher, or the change in market prices  
24 that some people have suggested. So there are things  
25 on both sides of the model, so I think it's a valid

56 (Pages 221 to 224)

Page 225

1 number.

2 Q. Okay. Also, in your testimony you talk  
3 about customers subsidizing customers that shop  
4 versus customers that don't shop, but according to  
5 your model how could there be customers that do shop  
6 if all customers act in their economic best interest  
7 and -- how could there be customers that do shop and  
8 customers that don't shop? If all customers act in  
9 their economic best interest, if it's in their  
10 economic best interest to exercise their option,  
11 i.e., switch when the market price goes down in the  
12 ESP, wouldn't all customers shop, if they're acting  
13 in their economic best interest, or not shop?

14 A. I was responding to somebody else's  
15 proposal that assumed only some people would shop. I  
16 think that's where I was coming from, and therefore  
17 saying you would have this unfair proposal. If  
18 everybody shops and acts in their economic interests,  
19 there would not be any subsidy.

20 MR. WHITE: No further questions, your  
21 Honor.

22 EXAMINER BOJKO: Thank you.

23 Mr. Kurtz?

24 MR. KURTZ: Thank you, your Honor.  
25 ---

Page 226

# CROSS-EXAMINATION

2 By Mr. Kurtz:

3 Q. Good evening, Mr. Baker.

4 A. Good evening, Mr. Kurtz.

5 Q. We're talking about the beginning of your  
6 testimony, the cost-of-service portion. I don't want  
7 to be repetitive because there have been a lot of  
8 questions on that already, but do I understand that  
9 basically one of the things you're saying is that  
10 anybody who thinks Senate Bill 221 reregulated  
11 generation is incorrect?

12 A. I believe it did not create a  
13 cost-of-service type approach to ratemaking for  
14 generation, is what I'm saying.

15 Q. Okay. Do you agree that Senate Bill 221  
16 did reregulate utility earnings?

17 A. Are we talking, Mr. Kurtz, about  
18 generation, or are we talking about wires, or what?

19 Q. Total earnings, generation, distribution,  
20 transmission, any earnings that hits the utility's  
21 income statement or any revenue that hits the  
22 utility's income statement.

23 A. There is definitely a significantly  
24 excessive earnings test, so the bill provides for  
25 that.

Page 227

1 Q. Okay. And to determine Ohio Power or  
2 CSP's earnings, we start with the income statement;  
3 is that correct?

4 A. Yes.

5 Q. And the income statement will include, as  
6 I just mentioned, does it not, all of the  
7 generation-related revenues that the utilities  
8 collect?

9 A. It would include -- it would include the  
10 revenues and some of those would be generation  
11 related.

12 Q. And it would also include expenses on the  
13 income statement that would then -- revenues minus  
14 expenses equals the net income?

15 A. Yes.

16 Q. Okay. And those expenses would include  
17 generation-related expenses.

18 A. Yes.

19 Q. Such as fuel -- fuel.

20 A. Yes.

21 Q. Depreciation on existing generating  
22 units?

23 A. All of those are things that are on the  
24 income statement.

25 Q. Let me read a list, and I think you'll

Page 228

1 agree: Variable O&M associated with generation,  
2 fixed O&M associated with generation, property taxes  
3 on the power plants, insurance on the power plants,  
4 emission allowances. Are all those included on the  
5 income statement as expenses and, therefore, factored  
6 into the earnings equation?

7 A. They can be.

8 Q. Is it your position that any -- that the  
9 definition of reasonable under the statute is a set  
10 of ESP rates that are more favorable in the aggregate  
11 than what the MRO would have been?

12 A. Yes.

13 Q. Does it make any difference what  
14 constitutes the ESP set of rates as long as it's more  
15 favorable in the aggregate than an MRO? Can anything  
16 be in the ESP as long as it's better than the MRO?

17 A. You're taking me to a place that I'm  
18 not -- I don't know how to answer that question.  
19 Anything? You know, in an ESP that's pretty broad.

20 Q. Well, can you make up -- well, it is  
21 broad. It is broad. Do the elements of the ESP have  
22 to be legitimate expenses of the utility?

23 A. No.

24 Q. I'm sorry?

25 A. No.

57 (Pages 225 to 228)

Page 229

1 Q. So that as long as -- that was my  
2 anything.

3 You can include in the ESP elements that  
4 are not legitimate expenses so long as the ESP is  
5 less -- is more favorable than what the MRO would  
6 have been; that's your definition of reasonable under  
7 the statute?

8 THE WITNESS: Could I have that read  
9 back?

10 (Record read.)

11 A. I believe the statute provides for  
12 noncost-based inclusions, for example, the automatic  
13 increases. And the test is whether or not it is more  
14 favorable in the aggregate than an MRO.

15 Q. Okay. Change subjects. The 5, 10,  
16 15 percent purchases.

17 A. Yes.

18 Q. The first year purchase for one of the  
19 utilities is estimated to be how much? Is it a  
20 hundred million for CSP, 120 million for Ohio Power?  
21 Just give me a number to work with.

22 A. The numbers that are in my Exhibit JCB-2  
23 in my original testimony were 100 million for  
24 Columbus & Southern, 120 million for Ohio Power.  
25 Mr. Hess has modified those numbers, and I don't know

Page 230

1 whether your witness did as well, to reflect a  
2 different set of market prices.

3 Q. And let's just use Ohio Power,  
4 120 million year 1. Then your Exhibit 2 shows it  
5 doubles year 2, 5 percent to 10 percent of  
6 240 million, and ultimately a purchased power expense  
7 of 360 million in year 3. I know that's a forecast  
8 but that's what your exhibit shows.

9 A. Yes.

10 Q. Now, year 1, \$120 million expense, assume  
11 that's the correct expense, the utility incurs an  
12 expense that then passes it through to consumers so  
13 it buys something for \$120 million and it collects  
14 \$120 million. There's no effect on earnings, just a  
15 straight pass-through with no markup; is that right?

16 A. The question is around deferrals and  
17 whether those get treated as earnings. If you  
18 assumed, and I don't believe you can do this, just  
19 look at a single element and say is it in one place,  
20 then it's in the other. It's in rates, but if I go  
21 with your hypothesis that I have a hundred million  
22 dollars of cost and I get a hundred million dollars  
23 of recovery, under that hypothesis there would be no  
24 impact on earnings, assuming no deferrals.

25 Q. Okay. Since there's no impact on

Page 231

1 earnings, the hundred million dollar expense is  
2 matched by a hundred million dollars in revenue. Why  
3 does AEP want to impose this hundred million dollar  
4 expense on consumers?

5 A. It is part of our plan to reflect the  
6 fact that we have taken megawatts out of our  
7 portfolio in order to serve Ormet, and we would be  
8 doing the same thing for Mon Power under the bill  
9 that -- or, the ESP as we've got filed.

10 Q. Is the real motivation that when you buy  
11 a hundred million dollars worth of power, 5 percent  
12 of the energy needs of Columbus & Southern in this  
13 example, it frees up an equivalent amount of power of  
14 self-generation to be sold off system?

15 A. No, I don't think that's a good  
16 characterization. What I said was we had lost  
17 generation from our -- we would be losing generation  
18 from our portfolio to serve these customers and we're  
19 trying to replace it.

20 Q. Strike the motivation part of the  
21 question. Would the physical effect of buying that  
22 amount of megawatt-hours be to displace other  
23 generation that would be available for sale  
24 off-system?

25 A. If you hold everything else equal, yes.

Page 232

1 Q. Now, the profits from off-system sales  
2 are allocated among the AEP East operating companies  
3 according to the interconnection agreement; is that  
4 correct?

5 A. Yes.

6 Q. Okay. And basically each of the  
7 operating companies, Ohio Power, Columbus & Southern,  
8 Kentucky Power, Indiana and Michigan, and Appalachian  
9 Power, get their member load ratio share of  
10 off-system sales profits no matter whose power plant  
11 generated the electricity for the sale.

12 THE WITNESS: Could I have the question  
13 read back just to make sure I am clear on all the  
14 words?

15 (Record read.)

16 A. I would just -- I would call it  
17 off-system sales margins, but they get their MLR  
18 share regardless of who supplies the power, yes.

19 Q. So under this hypothesis where you're  
20 buying 5 percent, 10 percent, 15 percent of power and  
21 then freeing up electricity for sale off system, the  
22 AEP shareholders do not get all of that additional  
23 margins from off-system sales; is that correct?

24 A. Again, you're going back to a premise  
25 that, as I said, it's to replace power that we have

58 (Pages 229 to 232)

Page 233

1 to now provide to Ormet and Mon Power, and if  
2 whatever comes out of any off-system sales, just as a  
3 general proposition, we share that in some  
4 jurisdictions with customers.

5 Q. And in other jurisdiction it's a straight  
6 flow-through to the ratepayers of that jurisdiction.  
7 Is that correct?

8 A. In some cases it is a direct  
9 flow-through; in other cases there's sharing.

10 Q. So the consumers in West Virginia,  
11 because there is an automatic flow-through of profits  
12 from off-system sales through their ENEC clause,  
13 their version of the fuel adjustment, those  
14 customers, if your 5 percent, 10 percent, 15 percent  
15 proposal in Ohio is adopted, the increase in  
16 off-system sales margins will actually benefit West  
17 Virginia ratepayers in the sense that they'll get  
18 their share, their member load ratio share of the  
19 additional off-system sales margins; is that correct?

20 A. I think you have to keep in mind that  
21 without this they would be disadvantaged with where  
22 they would have been had the company not had Ormet  
23 and Mon Power. It takes them back to where they  
24 would have been if Ormet and Mon Power hadn't been  
25 done.

Page 235

1 Q. Did you read Mr. Kollen's testimony where  
2 he has quantified the off-system sales profits in  
3 2007 for Ohio Power Company at 146.7 million and for  
4 Columbus & Southern 124.7 million?

5 A. I read Mr. Kollen's testimony. I don't  
6 remember those numbers, and I didn't verify those  
7 numbers.

8 Q. Okay. There's nothing in your rebuttal  
9 testimony or anybody's rebuttal testimony that takes  
10 issue with those amounts?

11 A. No. I don't think there's any need to  
12 because we're not proposing to flow it back.

13 Q. I guess my only -- this is a large dollar  
14 item we're talking about, the margins from off-system  
15 sales.

16 A. Relative to what?

17 Q. Relative to the cost increases that AEP  
18 is proposing.

19 A. It is a significant number relative  
20 to the rate increases that the company is proposing.

21 MR. KURTZ: Thank you, your Honor.

22 EXAMINER BOJKO: OCC?

23 MS. ROBERTS: Thank you.

24 ---  
25

Page 234

1 Q. Is the answer yes, that the West Virginia  
2 consumers will benefit?

3 A. Their customers will be put back in  
4 the position they were if we hadn't entered into  
5 those.

6 Q. Really, any native load growth on any of  
7 the operating companies' systems reduces the amount  
8 of power that can then be sold off-system just as a  
9 matter of physical reality or mathematics; isn't that  
10 right?

11 MR. RESNIK: Your Honor, I'm going to  
12 object. I tried to adhere to your prior rulings  
13 about seeing if the foundation was being laid for  
14 something that was relevant to Mr. Baker's rebuttal  
15 testimony, and --

16 MR. KURTZ: I'll withdraw the question.

17 Q. One last. You opposed the proposal of  
18 OEG and Kroger that off-system sales margins or  
19 profits be used as a credit in the fuel adjustment  
20 clause?

21 A. Yes.

22 Q. How much profit from off-system sales did  
23 Ohio Power earn in a representative year, 2007 for  
24 example?

25 A. I don't have that number.

Page 236

# CROSS-EXAMINATION

1 By Ms. Roberts:

2 Q. Mr. Baker, let's start on page 4 of your  
3 testimony. On line 9 you indicate that there is no  
4 restriction on the company of including the items  
5 you've listed, POLR and FAC, et cetera, in their ESP  
6 plan; is that correct? Page 4, line 9.

7 A. Yes, that's what the sentence starts  
8 with. "An ESP is in no way restricted from having  
9 the provisions" and then lists the provisions.

10 Q. By the same token the Commission is not  
11 restricted in deciding that the company shouldn't be  
12 allowed to recover any of those items, is it?

13 THE WITNESS: Could I have that one read  
14 back?

15 (Record read.)

16 A. The Commission has the ability to  
17 approve, modify, or disapprove our plan, and so those  
18 are what they can do. It is -- what we have  
19 suggested is that they should do that based on  
20 whether or not the ESP in the aggregate is more  
21 beneficial to customers than the MRO.

22 Q. And on line 17 of that page in response  
23 to the question you have identified three items that  
24 you believe warrant the Commission modifying the ESP;  
25

Page 237

1 is that correct?  
 2 MR. RESNIK: Your Honor, I'll object.  
 3 EXAMINER BOJKO: Grounds?  
 4 MR. RESNIK: It mischaracterizes the  
 5 testimony, particularly the use of the word  
 6 "warrant."  
 7 MS. ROBERTS: I just asked him if that's  
 8 what he did.  
 9 EXAMINER BOJKO: Yeah, I think that's  
 10 what it says, doesn't it?  
 11 MS. GRADY: Unless you want to strike  
 12 that?  
 13 MR. RESNIK: No. No. Thank you.  
 14 Appreciate the offer, though.  
 15 EXAMINER BOJKO: Can you answer the  
 16 question?  
 17 THE WITNESS: Could I have it read back?  
 18 (Record read.)  
 19 A. I don't disagree that the word "warrant"  
 20 shows up in the question. What I did in the answer,  
 21 though, was to say ways that I could see a Commission  
 22 modifying the ESP, and it lists three possible ways  
 23 or three possible reasons.  
 24 Q. And I just want to ask this question, are  
 25 there any other circumstances that you can identify

Page 238

1 that you think would warrant the Commission modifying  
 2 the ESP?  
 3 A. I have not done an exhaustive research.  
 4 What I did was I came up with three when I was  
 5 writing the testimony.  
 6 Q. All right. If you turn to page 9 of your  
 7 testimony --  
 8 A. Certainly.  
 9 Q. -- on line 13 you make a statement about  
 10 off-system sales that if the General Assembly in Ohio  
 11 intended to require a more significant item like OSS  
 12 margins to be credited against the fuel, they surely  
 13 had the opportunity to incorporate that mechanism in  
 14 SB 221. Do you see that?  
 15 A. Yes, I see that sentence.  
 16 Q. In fact, the General Assembly made no  
 17 indication of whether they thought it was or was not  
 18 appropriate to have a crediting of off-system sales  
 19 in an ESP, did they?  
 20 A. I believe that we say in the beginning of  
 21 that paragraph that in the entirety of Senate Bill  
 22 221, OSS margins are not mentioned. But I would note  
 23 that it isn't a secret about what AEP does in the  
 24 wholesale market, and to -- in the response that I  
 25 did to Mr. Kurtz, it's a significant number.

Page 239

1 In Virginia where they were going through  
 2 a similar "what do we do after the current bill takes  
 3 place," they knew about it, they decided to put in a  
 4 sharing arrangement.  
 5 I think if the General Assembly had  
 6 wanted to do that, they would have.  
 7 Q. But the statute speaks for itself;  
 8 wouldn't you agree?  
 9 A. I stand by in the entirety, it's not  
 10 mentioned.  
 11 Q. Thank you.  
 12 On page 10 of your testimony you had  
 13 testified on direct that when -- and correct me if I  
 14 mischaracterize this. I'm sure you or Mr. Resnik  
 15 will do that -- that when the ESP application was  
 16 prepared, that the company used the most recent data  
 17 in an effort to get the most representative data; is  
 18 that correct?  
 19 THE WITNESS: I'm sorry, can I have that  
 20 read back?  
 21 (Record read.)  
 22 A. No, I wouldn't characterize it that way.  
 23 I don't believe that's what I said.  
 24 Q. You didn't use the most current fuel  
 25 prices to provide the most representative fuel prices

Page 240

1 in the ESP filing?  
 2 A. We're talking here about the competitive  
 3 benchmark?  
 4 Q. No, I'm laying some foundational  
 5 questions regarding your direct testimony to ask  
 6 about page 10.  
 7 A. Okay. Can we start over then?  
 8 Q. Sure.  
 9 A. I thought -- you pointed me to page 9 so  
 10 I assumed we were talking about the competitive  
 11 benchmarks.  
 12 Q. I apologize, Mr. Baker.  
 13 A. Okay.  
 14 Q. In your direct testimony you testified,  
 15 didn't you, that in preparing the ESP application the  
 16 company attempted to use the most current prices, for  
 17 example fuel prices, or in the example of  
 18 Black-Scholes, the most current LIBOR interest rates,  
 19 in an effort to present the Commission with the most  
 20 representative filing of what the rate would be  
 21 during the ESP period.  
 22 A. I think you'd have to point me to a spot  
 23 in my testimony or my -- or the transcript. I don't  
 24 remember using those words. I may have, but I'd like  
 25 to see it in the context of where I said it.

60 (Pages 237 to 240)

Page 241

Q. All right. Here on page 10 you seem to make an argument that I would summarize as that if we update -- if we update, for example, energy prices, as OCC has suggested, then you can never update them enough because they would be out of date by the time the Commission issued an order. Is that a fair summary of your statement here on lines 5 through 9?

A. No. That's not a fair summary. What I'm saying is to pick a specific instant or a specific small period of time for the purposes of setting the competitive benchmark, this is all-around setting the competitive benchmark, that's not a valid way to approach it.

You need to look over a longer period of time as we did where we looked over effectively almost a nine-month period, and if -- once you do that, you get some stability to the pricing which should be more reflective of the future pricing than picking out a 1 day period or one 5-day period or one 15-day period, whatever choice it is, for one small spot. I just don't think that's a good approach.

Q. All right. Regarding the question on this page beginning on line 10, the last sentence, you say: "Do you agree with the assertion that the recent price decline marks the beginning of a trend?"

Page 242

Mr. Baker, have you done any studies to determine whether the recent decline in prices is or is not a trend?

A. Have I done a study? We don't -- I've said before I don't have a forecast -- I don't forecast what the future price is. I don't think any of us know it. This is around the point that was made that it was an unusual event and that, therefore, you should use it because it creates -- it's a trend. And I'm saying that this is not an unusual event because it's happened before and you shouldn't -- this is support for the idea that you don't pick a single point in time.

Q. Are you also saying that the decline in prices is not a trend?

A. How long's a trend?

Q. That's your word, a trend. You're saying it's not a trend.

A. I would say I look at trends and I say long periods of time. For example, in this case the three years, that's what you're looking at, the period of the ESP, and I would say that it does not -- it marks the beginning of a trend but the trend may be up.

Q. But you don't know.

Page 243

A. I've said that I don't know.

Q. Yeah. All right.

On page 12 of your testimony in the question on line 4 it says, "If the Companies' competitive benchmark were adjusted lower, as Staff Witness Johnson and OCC Witness Medine have proposed," and then it goes on. Can you identify for me where or when OCC Witness Medine proposed that the benchmark be reduced?

A. Ms. Medine said that we were kind of fast and loose, is my recollection, I'm kind of paraphrasing, with our choices for the inputs to our Black-Scholes model. And one of them I think she talked about was the market price, and so I just took the fact that another witness had said that the market prices were lower today and said what would it be if we used the prices as done by Miss Smith.

Q. Can you tell me if you agree that if the ESP price is updated, whether the MRO price should also be updated?

THE WITNESS: I'm sorry, can I have that read back?

EXAMINER SEE: Yes.

(Record read.)

A. I don't think we're proposing to update

Page 244

the ESP price.

Q. No, but if they were updated, hypothetically speaking, if the ESP prices were updated in the Black-Scholes model, do you also agree that the MRO prices should be updated?

A. I need you to help me out here. Are you saying if we updated the ESP prices to have three years of ESP prices as forecasted? Is that what we're talking about here?

Q. If they were updated by the Commission in any way, would the MRO price also need to be updated to establish the appropriate inputs to the model?

MR. RESNIK: Can I have just the last part of that question, inputs what?

THE REPORTER: To the model.

Q. I'm sorry. I'm sorry. For the benchmark it should be. Let me say that again.

If the ESP price were updated, benchmark price were updated, would it also be appropriate to update the MRO price so that they would be presented on a similar basis?

MR. RESNIK: Your Honor, I'm going to object. The witness has indicated the company is not proposing to update the ESP. There's nothing in his testimony -- in his rebuttal testimony that says that

61 (Pages 241 to 244)

Page 245

1 we want to change the ESP from what we had filed so I  
2 think the question is irrelevant; if not irrelevant,  
3 at least outside the scope of rebuttal.

4 MS. ROBERTS: I think he opened the door,  
5 your Honor.

6 EXAMINER SEE: And I'm going to allow  
7 Mr. Baker to answer the question to the extent that  
8 he can.

9 THE WITNESS: Okay. I'm going to need it  
10 reread.

11 EXAMINER SEE: That's fine.  
12 (Record read.)

13 A. We are not proposing, except in the case  
14 of the POLR, that the competitive benchmark be used  
15 in the ESP. We have used it for comparative purposes  
16 only to look at one versus -- look at the ESP and the  
17 fact that we have proposed a 5, 10, 15 percent  
18 purchase and priced that to make them -- to create an  
19 apples-to-apples situation.

20 Q. But you used similar time periods over  
21 which you expected these rates to be in effect; isn't  
22 that correct?

23 A. We used similar time frames to compare  
24 the ESP/MRO, yes.

25 Q. Yes. And you also had the rates in terms

Page 246

1 of making an apples-to-apples comparison as  
2 consistent as possible regarding their inputs and how  
3 they were calculated?

4 A. We attempted to use the same numbers in  
5 the analysis that I provided in JCB-2.

6 Q. And that's what you believe to be the  
7 appropriate way to develop a comparison between the  
8 two.

9 A. Yes.

10 Q. If you turn to page 16 of your  
11 testimony --

12 MR. RESNIK: I'm sorry, which page?

13 MS. ROBERTS: Sixteen.

14 Q. -- you begin to talk about the  
15 Black-Scholes model. In your first answer you refer  
16 to the risk-free interest rate. Would you agree that  
17 the term "risk-free interest rate" is a term of art  
18 in the financial service industry?

19 A. Yeah, I think that's probably fair.

20 Q. Okay. And you address the intervenors'  
21 challenges to your calculation of Black-Scholes in  
22 your rebuttal; is that correct?

23 THE WITNESS: Could I have the question  
24 read back?

25 (Record read.)

Page 247

1 A. I think the only place I do it, and if  
2 I'm wrong you can help me out, is the discussion of  
3 the LIBOR rate.

4 Q. And it's your premise in offering the  
5 Black-Scholes model to the Commission, isn't it, that  
6 it accurately reflects the risks to the company of  
7 the POLR obligation?

8 A. I think I've said it values the option  
9 that's provided to customers.

10 Q. Is there any basis upon which you have  
11 assumed that the value to the risk of the company is  
12 the same as the option value to the customers?

13 A. The POLR was calculated based on the  
14 value to customers.

15 Q. Have you -- has the company included --  
16 AEP-Ohio -- in its 2009 budgeting, has it accounted  
17 for any shopping customers in 2009?

18 MR. RESNIK: Your Honor, are we still on  
19 the Black-Scholes, if I may inquire?

20 MS. ROBERTS: Yes.

21 MR. RESNIK: Well, I would object again.  
22 The testimony on rebuttal is limited to two discrete  
23 points. The degree of shopping assumed or not  
24 assumed is not one of those points addressed in  
25 Mr. Baker's rebuttal testimony. I can't see it

Page 248

1 becoming a foundation for anything that's relevant.

2 EXAMINER BOJKO: Well, we'll  
3 give Ms. Roberts the same courtesy.

4 I don't know if you're just asking for my  
5 response, but let's see where it's gone.

6 THE WITNESS: Could I have the question  
7 read back?

8 (Record read.)

9 A. I believe what it would represent is the  
10 amount of shopping customers that we're experiencing  
11 today.

12 Q. What is included in the 2009 budget would  
13 be reflective of the shopping customers today; is  
14 that what you mean by your answer?

15 A. That's what we would have put for  
16 budgeting purposes. That doesn't mean that's what's  
17 going to actually happen and that's not  
18 necessarily -- well, I'll leave it at that's not  
19 what's actually going to happen. It's a budget.

20 Q. All right. On page 17 of your testimony,  
21 on line 4 your answer begins "U.S. Treasury rates and  
22 the LIBOR, the two most commonly used proxies for the  
23 risk-free interest rate." What authority do you use  
24 to support that statement?

25 A. Discussions with people who are in the

62 (Pages 245 to 248)

Page 249

1 industry who use U.S. Treasury rates and LIBOR.

2 Q. And who would that be?

3 A. I've talked to our finance people, I've  
4 talked to our commercial operations people, all of  
5 who use LIBOR as part of their day-to-day business.

6 Q. And in supporting the Black-Scholes model  
7 in your testimony, did you make the selection of what  
8 interest rates were used in that calculation?

9 A. People in commercial operations and I got  
10 together and talked about the various inputs, and one  
11 of the things we were trying to do was get a proxy  
12 for the risk-free rate, and the people who use the  
13 model on a day-to-day basis chose LIBOR.

14 Q. And on page 18 of your testimony, the  
15 answer beginning on line 5, you have a lot of data  
16 here over how the Treasury has compared to LIBOR over  
17 the last eight years. Where was this data sourced  
18 from?

19 A. I believe it was Bloomberg.

20 Q. And specifically on line 6 of that page  
21 you talk about the spread between LIBOR and the  
22 Treasury rates has ranged from a high of 107 basis  
23 points to a low of 26 basis points; is that correct?

24 A. Yes.

25 Q. And that looks like what is actually

Page 250

1 reflected on your Exhibit 2F, the chart of the LIBOR  
2 versus the Treasury rates. Is that correct?

3 A. That was the source of that, yes.

4 Q. Okay. The data that you used to evaluate  
5 that was -- what was the most recent source of the  
6 data you used to make that determination? Let me say  
7 that a different way. What was the most recent data  
8 you used in making that determination?

9 A. Well, since it's historical data on this  
10 chart, it would be the date that the data -- it would  
11 be those points in time.

12 Q. Okay. But the most recent data point  
13 would be 7/25/08; is that correct?

14 A. Yes, that's the most recent point.

15 Q. Do you know whether the spread between  
16 LIBOR and the U.S. Treasuries has changed since July  
17 of '08?

18 A. Yeah, I believe there was a short period  
19 of time, and I'm not sure exactly how many months or  
20 weeks, but during -- there was a period after Lehman  
21 fell that there become a spread because of the fact  
22 that the LIBOR was frozen for a period of time while  
23 the rate was dropping. I understand that they have  
24 now come back into the kind of tracking that we see  
25 here.

Page 251

1 MS. ROBERTS: Your Honor, may I approach  
2 the witness?

3 EXAMINER BOJKO: You may.

4 Q. It was your testimony, wasn't it,  
5 Mr. Baker, that the higher the interest rate used in  
6 the POLR calculation, the lower the POLR charge,  
7 resulting POLR charge?

8 A. Yes, that's what I said. And what I  
9 said, was it had a -- on lines 10 through 12, that it  
10 is not a big driver for the POLR charge.

11 Q. You used there an interest rate  
12 differential of a hundred basis points, isn't that  
13 correct, to make that determination?

14 A. Yes.

15 Q. All right. I've handed you a document  
16 from the Financial Trade Industry dated September  
17 16th, and I would direct your attention to -- and I  
18 highlighted it on your copy but I didn't keep it on  
19 mine -- the second full paragraph. Is this your  
20 recollection, that it was in September that the LIBOR  
21 rate rose precipitously?

22 A. Precipitously is a "beauty in the eyes of  
23 the beholder" kind of word. So I -- what I would say  
24 is this was the period that I understood that there  
25 was a spread that developed that I indicated has come

Page 252

1 back to more normal historical values.

2 Q. But if you look at your chart, Mr. Baker,  
3 for July, what is the LIBOR rate shown there, for  
4 July 25th, 2008? Looks like it's about 4 percent,  
5 doesn't it?

6 A. It's slightly above 4, yeah.

7 Q. And in September the LIBOR rate rose, it  
8 says, 3.3 percent to 6.44 percent. Would you  
9 consider that a significant increase in the LIBOR  
10 rate?

11 A. Yes, that's an increase in the LIBOR  
12 rate. Yes.

13 Q. And do you know whether the spread  
14 between the LIBOR and the U.S. Treasuries has  
15 remained through the current period of this week?

16 A. In talking to people who deal with this,  
17 they told me that the spreads have come back to more  
18 normal values.

19 Q. Between 26 basis points and 107 basis  
20 points, is that what you consider to be the normal  
21 spread?

22 A. They felt that it was still -- that it  
23 was back within the range, that it hadn't gotten out  
24 of kilter like it did in the September time frame.

25 Q. I'm trying to understand what you

63 (Pages 249 to 252)

Page 253

1 consider the normal range to be. Do you consider it  
2 the range to be shown on your chart on page 17, which  
3 is a range between, you testify, 26 basis points to  
4 107 basis points?

5 A. It was a normal range as defined by  
6 people in our company who borrow money based on the  
7 LIBOR.

8 Q. All right. Well, did the people in your  
9 company consider your testimony, your answer on  
10 line -- page 18, line 5, to be considered a spread in  
11 the normal LIBOR range?

12 A. I didn't ask them.

13 Q. So you don't know whether the current  
14 LIBOR spread is correlated in any way to your  
15 testimony on page 18?

16 A. The purpose of this was to refute a  
17 position that I heard during this hearing that  
18 there -- that LIBOR is highly volatile and it was in  
19 reference to the Treasury. And the purpose of this  
20 chart was purely to show that they tracked pretty  
21 closely, and so if you consider one to be volatile,  
22 then the other is to be volatile. I believe that's  
23 what the testimony says.

24 Q. I understand. But your testimony on page  
25 18, the answer beginning at line 5, you discuss the

Page 255

1 We would have changed it for the, for  
2 example, for the ESP. As that developed and it  
3 changed over time, we would rerun it. And we would  
4 rerun it for changes in market price at various  
5 times.

6 Q. And interest rates?

7 A. I don't remember whether we reran it  
8 specifically for a change in interest rates, but I  
9 would think --

10 Q. Do you know whether it was --

11 MR. RESNIK: Can he finish his answer,  
12 please?

13 MS. ROBERTS: Oh, I'm sorry.

14 EXAMINER BOJKO: Yes.

15 A. I would assume that the last time we ran  
16 it we updated to have the most current interest  
17 rates.

18 MS. ROBERTS: Thank you, Mr. Baker. I  
19 have no other questions.

20 EXAMINER BOJKO: Let's go off the record.  
21 (Discussion off the record.)

22 EXAMINER BOJKO: Let's go back on the  
23 record. Mr. Bell.

24 MR. BELL: Thank you.  
25 ---

Page 254

1 spread between LIBOR and the Treasury rate over the  
2 last eight years. And what I'm asking you is whether  
3 you can establish that there's any correlation  
4 between this spread and what the people you talked to  
5 consider to be a normal spread.

6 A. I did not show them this spread and say,  
7 "Do you see a correlation?" But if I look back at a  
8 chart like this, I would say -- and I'm looking at,  
9 you know, a seven-year time frame. If I'm in that  
10 kind of business and I look and I say, gee, look at  
11 what the spreads were for the last period, I think  
12 they would consider that in their decision, but I  
13 didn't talk to them about it.

14 Q. Okay. Regarding the run of the  
15 Black-Scholes model an indeterminate number of times,  
16 Mr. Baker, in running the model you used the same  
17 Black-Scholes model but what you changed were the  
18 inputs in that indeterminate number of runs; is that  
19 correct?

20 A. Yeah. Boy, I sure wish I hadn't used the  
21 word "indeterminate," but we did run it more than  
22 once, and what we did was we changed some of the  
23 inputs. For example, we would not have changed the  
24 term because it was three years from the start, it  
25 was three years at the end.

Page 256

# CROSS-EXAMINATION

1 By Mr. Bell:

2 Q. Mr. Baker, do you remember the line of  
3 examination of Mr. Randazzo relative to the inclusion  
4 of all of the generating -- Ohio generating plant in  
5 rate base in past rate proceedings?

6 A. I remember the discussion we had on the  
7 inclusion of all the generating assets that were  
8 owned by the company at that time.

9 Q. Is it not the company's position that the  
10 Commission in evaluating the company's ESP in this  
11 case should not consider the past recovery of capital  
12 or the return on capital in evaluating the current  
13 ESP? For instance, is it your position effectively  
14 that if the company, in fact, had recovered its total  
15 capital investments in generating assets, that that  
16 would be immaterial in reviewing the appropriateness  
17 of the company's ESP plan?

18 A. I don't think this is a cost-of-service  
19 bill, and the premise of the bill, as I understand  
20 it, is you take your current rates and you make  
21 adjustments to that.

22 Q. I think your answer is yes, you're saying  
23 then that the cost -- this is not cost of service, it  
24 could be entirely possible for AEP to have recovered  
25

64 (Pages 253 to 256)

Page 257

1 its total capital investment in generating assets to  
2 the point that it now has a zero capital investment  
3 through past depreciation, et cetera, et cetera, and  
4 earned a reasonable return on the investment that  
5 existed in the past, that that is totally irrelevant  
6 from the company's perspective in the Commission's  
7 review of its current ESP, correct?

8 THE WITNESS: Could I have the question  
9 read back?

10 (Record read.)

11 A. To answer the question that she just read  
12 back --

13 Q. Yes.

14 A. -- I don't think it's possible that the  
15 company could have recovered all of its cost of  
16 capital and a fair rate of return.

17 To finish the answer, I do not believe  
18 that that, since it is a cost of service, that where  
19 we are in recovery of investment is an appropriate  
20 determinant.

21 Q. Thank you. That's fair. You have given  
22 me what I want, Mr. Baker. We're working together.

23 A. We'll try.

24 Q. Following up on a line of examination by  
25 Mr. Petricoff, you've been involved in the regulatory

Page 258

1 arena for several decades, have you not, Mr. Baker?

2 A. I have had some experience in the  
3 regulatory arena for several decades. I've only had  
4 responsibility for regulatory over the last seven  
5 years.

6 Q. Does the term, quote, public interest  
7 have any meaning to you?

8 A. Yes.

9 Q. Would you agree that within the context  
10 of the regulatory arena that, quote, public interest,  
11 end quote, transcends the parochial economic interest  
12 of either the company's shareholders or its  
13 ratepayers?

14 A. I don't -- can you help me with where  
15 that definition came from?

16 Q. I just made it up.

17 A. Well then that's --

18 Q. It's a concept.

19 A. Well, then I probably won't agree with  
20 you.

21 Q. Are you being facetious, Mr. Baker?

22 A. No, I'm not being facetious. I'd like to  
23 know where the quote came from, and if you can tell  
24 me that -- is it in the Federal Power Act? Is it in  
25 Senate Bill 221? Is it in the predecessor, Senate

Page 259

1 Bill 3? I need to know where it came from.

2 Q. Do you then -- would you agree, Mr. --

3 A. Baker.

4 Q. -- Baker, that to the extent that Senate  
5 Bill 221 does not define for the Commission the  
6 parameters by which the Commission is to ascertain  
7 whether the ESP is better than the MRO, that the  
8 Commission may, in use of its enlightened judgment,  
9 make that determination based upon its finding of  
10 what is in the, quote, public interest, end quote?

11 A. I believe what the Commission needs to do  
12 is make an evaluation of our ESP and compare it to  
13 the MRO and determine whether to accept, modify, or  
14 reject our plan.

15 Q. Didn't you in response to a question by  
16 Mr. Petricoff, say, and I quote, "The Commission can  
17 and will do what it needs to do"? And I think I got  
18 that word for word.

19 A. You may have. I'm surprised I threw  
20 "needs" in, but if that was my statement, I may have  
21 said it.

22 Q. And in determining what is, quote, more  
23 favorable, it is up to the Commission to consider --  
24 to determine what factors it will consider, what time  
25 frame it will consider those factors influencing, as

Page 260

1 well as the circumstances under which those factors  
2 evidence themselves?

3 MR. RESNIK: Your Honor, I'm going to  
4 object. We've had more foundations built this  
5 afternoon than would be built at a mason's  
6 convention. I think that it is beyond the scope of  
7 the rebuttal testimony. The other foundations didn't  
8 seem to go anywhere. I don't think this one's going  
9 to either.

10 EXAMINER BOJKO: Well, I hate to deny  
11 Mr. Bell the same courtesy that I have offered to all  
12 the other masonry workers today.

13 MR. BELL: I'll wrap this up very  
14 shortly.

15 EXAMINER BOJKO: That's what I was going  
16 to ask.

17 MR. BELL: Yes.

18 EXAMINER BOJKO: If there's any way we  
19 could shortcut this, that would be great.

20 Q. (By Mr. Bell) Picking up on the line of  
21 Mr. Petricoff, do you believe the Commission should  
22 approve a proposed ESP plan that has been  
23 demonstrated not to be in the, quote, public  
24 interest, even though such a plan in the aggregate is  
25 found to be more beneficial than the MRO over the

65 (Pages 257 to 260)

Page 261

1 period of the plan?

2 A. I would say that since there are two  
3 options customers will be served under, either an MRO  
4 or an ESP, that if the ESP is more favorable than the  
5 MRO, it's in the public interest.

6 Q. Would you agree, Mr. Baker, that an  
7 appropriate measure of the benefits of the ESP would  
8 be the likely end result produced by the ESP over the  
9 period of the ESP, that is, testing the benefits by  
10 the results produced by the ESP?

11 A. I believe the Commission should be  
12 looking at the qualitative and the quantitative  
13 impacts of the MRO and the ESP in evaluating whether  
14 to approve it.

15 Q. That's fair. So that on page 5 where you  
16 state: "The plan to make purchases" -- and this is  
17 in respect to Purchase Power Proposal, that element  
18 of the plan you said "should be approved if the total  
19 ESP, including the purchases, is in the aggregate  
20 more attractive than an MRO."

21 By the use of the term "attractive," you  
22 do not there mean to imply a cosmetic attractiveness.

23 A. No, I didn't mean cosmetic.

24 Q. What you meant there, I trust then, is  
25 that it has to be substantively demonstrated to be

Page 262

1 more attractive or more beneficial.

2 A. It has to be a better option for  
3 customers than the MRO.

4 Q. And in your testimony going to the  
5 Commission doing what it's going to do, what the  
6 Commission is going to do, would you agree that the  
7 Commission in so doing can effectively alter the  
8 period of the company's proposed plan or any of its  
9 facets?

10 A. The Commission will put out an order, and  
11 if they modify the plan, they modify it, and then we  
12 will review it and determine whether that  
13 modification is acceptable.

14 Q. Does 221 in any way, shape, or form  
15 limit, for instance, the Commission in reducing the  
16 period of the plan, say, from three years to one  
17 year, if the Commission were to find that given the  
18 economics, the economy of the state of Ohio, it's in  
19 the public interest to abbreviate the period of the  
20 plan from three years to one?

21 A. I don't believe that the bill limits how  
22 the Commission can modify.

23 Q. And that is true with respect to the  
24 various components of the plan as well; is it not?

25 A. Yeah. I was going to finish the

Page 263

1 sentence.

2 Q. I'm sorry, I thought you finished.

3 A. They can modify -- I read the bill to say  
4 they can modify the plan. I don't see any limit as  
5 to what they can change. The impact, though, is that  
6 then becomes a modification to the plan and it then  
7 goes back to the company to decide what action to  
8 take.

9 Q. I'm not questioning the company's ability  
10 to accept or reject. I'm -- the question was solely  
11 directed toward the ability of the Commission to  
12 completely refigure, reconfigure, if you will, the  
13 company's proposed ESP leaving the Commission's  
14 reconfigured ESP then for either acceptance or  
15 rejection by the company.

16 A. I don't see anything that limits the  
17 Commission in the modification other than -- I read  
18 it that they're supposed to look at it consistent and  
19 approve it consistent with if it's more favorable  
20 than the MRO.

21 Q. So that such a modification can have --  
22 such a modification can be motivated and predicated  
23 upon public interest factors as may be identified by  
24 the Commission.

25 A. And I go back to my statement I made

Page 264

1 earlier, that I think if it's better than the MRO, it  
2 would be in the public interest.

3 Q. The Commission's modification of the  
4 company's proposed plan can be directed towards  
5 making it even more beneficial than the benefits  
6 bestowed in the company's proposed ESP, may it not?

7 MR. RESNIK: Your Honor, I'm going to  
8 object. I know we've had questioning of nonattorneys  
9 on this, but the statute specifically says that the  
10 Commission shall approve the plan that's more  
11 favorable. It does not give the Commission latitude  
12 to make it even more favorable.

13 MR. BELL: I'll withdraw the last  
14 question. I think Mr. Baker sufficiently responded  
15 for purposes of my inquiry, and I did hold to my  
16 representation that my cross would be limited.

17 EXAMINER SEE: To 15 minutes?

18 MR. RINEBOLT: Of fame.

19 EXAMINER SEE: Mr. Rinebolt.

20 MR. RINEBOLT: Thank you, your Honor.

21 ---

# CROSS-EXAMINATION

22 By Mr. Rinebolt:

23 Q. Good evening, Mr. Baker.

24 A. Good evening, Mr. Rinebolt.

66 (Pages 261 to 264)

Page 265

1 Q. I know we've sat at the same witness  
2 table in the past involving this issue and we had  
3 different views then. I'm sure that that continues  
4 to this day, so I just want to clarify a couple of  
5 your points.

6 In your mind is cost-based regulation  
7 inherently the same as cost-of-service regulation?

8 A. I think -- I was thinking of cost of  
9 service in the broad sense, Mr. Rinebolt. When you  
10 were looking at how you determine rates, you look at  
11 all the costs of the company, determine a revenue  
12 requirement. When I'm using the term "cost based," I  
13 was tending to use that in reference to certain items  
14 of our ESP.

15 Q. So there are certain items that are cost  
16 based from your perspective.

17 A. Yeah. I would say the FAC is cost based.

18 Q. Based on your familiarity with the  
19 statute, do you believe that an MRO, a market rate  
20 option standard service offer rate is a cost-based  
21 rate?

22 A. Not in its entirety.

23 Q. Well, let me -- if I understand an MRO  
24 correctly, a bidding scheme is developed, the right  
25 to supply or that is -- the need for that supply is

Page 266

1 bid out in the market in some form or fashion, and  
2 the lowest price wins. Is that your understanding of  
3 an MRO?

4 A. For whatever percentage a company is  
5 allowed to blend in that piece of it, yes.

6 Q. Okay. And the excess earnings test,  
7 there's obviously a revenue analysis involved in  
8 that, so that would also be a cost-based measure  
9 that's included in the statute. Is that a reasonable  
10 assessment?

11 A. I don't consider an earnings test that's  
12 a stand-alone to be a cost-based approach. It's a  
13 piece of the statute that deals with significantly  
14 excessive earnings. I wouldn't characterize anything  
15 more than that.

16 Q. Okay. At the top of page 3 you say that  
17 many parties have -- or, many parties for the  
18 legislative debate proposed a just and reasonable  
19 standard for evaluating costs. Does the statute in  
20 section 4928 still call for a reasonable rate for  
21 customers?

22 A. I'm sorry, would you point me to --

23 Q. 4928.02(A).

24 MR. RINEBOLT: Withdrawn. It's in the  
25 statute. No need to ask this.

Page 267

1 On page 4 at the very, very top you --  
2 and it actually begins on page 3, but you basically  
3 take the position that since the Ohio legislation  
4 doesn't look anything like the Virginia legislation,  
5 that there's no cost basis -- there's no reason to  
6 use cost in establishing rates. Is that basically  
7 your point, that Virginia -- Ohio's legislation isn't  
8 Virginia's?

9 A. No. My statement's about the cost of  
10 service is what's covered in the two Q and As above  
11 that.

12 Q. Okay.

13 A. This was just an example of another state  
14 that had a choice to do market, some kind of -- I  
15 guess they could have done a hybrid, I don't remember  
16 there ever being any discussion, or going back to a  
17 more traditional cost of service, and they chose to  
18 go back to a more traditional cost of service.

19 Q. On page 15 at line 9 you indicate that:  
20 "The cost of the POLR obligation for the Companies  
21 arises from the fact that the Companies must manage  
22 their portfolio." What kind of a portfolio are you  
23 discussing, Mr. Baker, are you referring to?

24 A. The generation portfolio.

25 Q. Generation. So AEP as a company has the

Page 268

1 ability to manage a generation portfolio, I take it.

2 A. Yeah. We do it on a day-in/day-out  
3 basis.

4 Q. Okay.

5 A. It doesn't mean there aren't risks  
6 imposed by certain actions that may lead you to  
7 manage it differently.

8 MR. RINEBOLT: Your Honor, that's all I  
9 have.

10 Mr. Baker, thank you very much.

11 THE WITNESS: You're welcome.

12 EXAMINER SEE: Thank you.

13 Mr. Jones or Mr. Margard?

14 MR. JONES: No questions, your Honor.

15 EXAMINER SEE: Any redirect for  
16 Mr. Baker?

17 MR. RESNIK: No, we have no redirect,  
18 your Honor.

19 EXAMINER SEE: Okay.

20 MR. RESNIK: I wasn't sure if there were  
21 questions from the Bench.

22 EXAMINER SEE: No, there are no questions  
23 from the Bench.

24 MR. RESNIK: In that case, your Honor,  
25 I'd move for the admission of Companies' Exhibit 2E

67 (Pages 265 to 268)

Page 271

1 and 2F.

2 EXAMINER SEE: Are there any objections  
3 to the admission of 2E and 2F?

4 Hearing none, Companies' Exhibits 2E and  
5 2F are admitted into the record.

6 MR. RESNIK: Thank you.

7 (EXHIBITS ADMITTED INTO EVIDENCE.)

8 EXAMINER SEE: And since we have already  
9 determined the briefing schedule, it's December  
10 30th for initial briefs and reply briefs are due  
11 January 14th.

12 If there's nothing else to be addressed  
13 in this case --

14 MR. RESNIK: There's one other thing.

15 MS. GRADY: Your Honor.

16 EXAMINER SEE: I'm sorry?

17 MS. GRADY: I thought it was the 31st.

18 EXAMINER SEE: 30th.

19 MS. GRADY: The 30th.

20 EXAMINER SEE: It is the 30th.

21 MS. GRADY: Thank you.

22 EXAMINER SEE: Yes, Mr. Resnik.

23 MR. RESNIK: I would just like to  
24 indicate our, and my guess is probably other  
25 people's, appreciation for a lot of patience that was

# 1 CERTIFICATE

2 I do hereby certify that the foregoing is  
3 a true and correct transcript of the proceedings  
4 taken by me in this matter on Wednesday, December 10,  
5 2008, and carefully compared with my original  
6 stenographic notes.

1 shown from the Bench, both you and Hearing Examiner  
2 Bojko. It's been a tough several weeks. Sometimes  
3 we may enjoy ourselves down here more than you're  
4 enjoying yourself up there, but I just wanted to note  
5 that for the record.

6 EXAMINER SEE: Thank you. We also  
7 appreciate you allowing, all of you allowing us to  
8 tag team because it allowed us to address other tasks  
9 that we're faced with.

10 Thank you very much.

11 MR. BELL: I think the same can be said  
12 for the reporter. She's put up with a lot.

13 MR. MASKOVYAK: Hear, hear.

14 EXAMINER SEE: Thank you all. That's  
15 all.
