

Case No. 11-0430-EL-REN  
Boyce Solar Array  
Staff Interrogatories - Initial Set

Question 1: In section O of the application you listed the following:

If the facility had a meter that accurately demonstrates generation levels, please state the specific start date, and below insert documentation from the remote monitoring and reporting system:  
January 29, 2011

However, you did not insert documentation from the remote monitoring and reporting system. Please provide such documentation. In the absence of this documentation the start date from which an attribute tracking system will begin to count generation data toward the creation of renewable energy credits will be the date of certificate issuance in the state of Ohio.

Answer 1: The system start date should read 1/29/2008. The monitoring system available was the SMA inverter internal kWh meter. At present, the original inverter is still operating and recording system kWh production. In the event this data does not suffice we can provide records demonstrating system startup via Berea Municipal Utility to help document production from 1/29/2008.
