

Case No. 11-0125-EL-REN
Johnson Melloh Solutions - Small PV
Staff Interrogatories – Second Set of Questions

Question 1: In your response, you indicated that the screenshot indicates that your system has been operating since August 30, 2010. For the purposes of section O we need to be able to see how much power was generated on the day you select. Your screen shot and the monitoring website does not indicate what power was generated on August 30, 2010. The earliest date I could see that data existed for was October 14, 2010.

We could accept October 14, 2010 as the date you can go back to. Would you like us to accept October 14, 2010? If you would like an earlier date please submit documentation that shows the system was generating at that earlier date.

Answer 1: Our system was up and running on August 30, 2010. Our remote monitoring was not up and running until October 14, 2010. At that time, the production of KWh up to that point was added to the remote monitoring to make it complete, but there is no record of the production from August 30 to October 14, except for the utility meter that was installed specifically to measure this plant. Based on this, it looks like October 14, 2010 will have to be our start date.
