SECTION 5 – SERVICE OFFERINGS

The following services are available to Customers under individual case basis arrangements:

A. Metro Ethernet Services:

Metro Ethernet is a network that covers a metropolitan area and that is based on the Ethernet standard. It is commonly used as a metropolitan access network to connect subscribers and businesses to a larger service network or the Internet. Businesses can also use Metro Ethernet to connect branch offices to their Intranet. A typical service provider Metro Ethernet network is a collection of Layer 2 or/and Layer 3 switches or/and routers connected through optical fiber. The topology could be a ring, hub-and-spoke (star), or full or partial mesh. The network will also have a hierarchy: core, distribution (aggregation) and access. The core in most cases is an existing IP/MPLS backbone, but may migrate to newer forms of Ethernet Transport in the form of 10Gbit/s, 40Gbit/s or 100Gbit/s speeds.

The connections are primary Layer 2 in Nature, but can also Layer 3. Point-to-Point network do not provide redundancy and can be at speeds of 5Mbps to 100Gbps
