Stipulation Provisions Relating to the Pool.....	21
Conclusion.....	25

TESTIMONY OF  
RICHARD E. MUNCZINSKI  
IN SUPPORT OF THE  
STIPULATION AND RECOMMENDATION  
ON BEHALF OF  
COLUMBUS SOUTHERN POWER COMPANY  
AND  
OHIO POWER COMPANY

1    **PERSONAL DATA**

2    **Q.    WHAT IS YOUR NAME AND BUSINESS ADDRESS?**

3    A.    My name is Richard E. Munczinski and my business address is One Riverside  
4           Plaza, Columbus, Ohio 43215.

5    **Q.    BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?**

6    A.    I am employed by the American Electric Power Service Corporation (AEPSC), a  
7           unit of American Electric Power (AEP). My title is Senior Vice President –  
8           Regulatory Services.

9    **Q.    WHAT ARE YOUR RESPONSIBILITIES AS SENIOR VICE PRESIDENT**  
10       **–REGULATORY SERVICES?**

11   A.    I am directly responsible for overseeing AEP's regulatory activities before eleven  
12           state regulatory commissions and the Federal Energy Regulatory Commission  
13           (FERC). Additionally, I am AEP's Chief Reliability Compliance Officer. In this  
14           role, I oversee the development and implementation of strategic policy within  
15           AEP to ensure compliance with North American Reliability Corporation (NERC)  
16           reliability standards for the AEP system, as well as AEP's participation in  
17           regional transmission organization (RTOs).

1 **Q. WHAT IS YOUR EDUCATIONAL AND PROFESSIONAL**  
2 **BACKGROUND?**

3 A. I earned a bachelor of engineering degree in electrical engineering and a master's  
4 degree in management science from Stevens Institute of Technology in Hoboken,  
5 New Jersey. I am a member of the Institute of Electrical and Electronics  
6 Engineers.

7 Prior to joining AEP, I was an electrical engineer for Ebasco Services Inc.,  
8 New York. I joined AEP in 1978 in the Project Engineering department and  
9 transferred to Corporate Planning and Budgeting in 1982. I became Director of  
10 Rate Case Management in 1992 and Vice President of Regulatory Services in  
11 1996 leading the regulatory approval process for the merger with Central and  
12 South West Corporation (CSW). I was named Senior Vice President - Corporate  
13 Planning and Budgeting in 1998 and Senior Vice President - Shared Services in  
14 2008. I have served in my current role as Senior Vice President-Regulatory  
15 Services of AEP since January 2010.

16 **Q. HAVE YOU PREVIOUSLY SUBMITTED TESTIMONY BEFORE A**  
17 **REGULATORY AGENCY?**

18 A. I have testified or submitted testimony before the regulatory commissions in the  
19 states of Ohio, Virginia, West Virginia, Michigan, Arkansas, Indiana, Kentucky,  
20 Louisiana, Oklahoma, Texas and before the Federal Energy Regulatory  
21 Commission (FERC).

22 **PURPOSE OF TESTIMONY**

23 **Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY?**

1 A. I will explain and sponsor certain provisions in the September 7, 2011 Stipulation  
2 and Recommendation (Stipulation) entered into by a substantial number of parties  
3 including Columbus Southern Power Company (CSP) and Ohio Power Company  
4 (OPCo) (CSP and OPCo are collectively referred to as “AEP Ohio” or the  
5 “Company”). Specifically, I will address the Stipulation’s provisions for  
6 obtaining approvals before the Federal Energy Regulatory Commission (FERC)  
7 of the proposed corporate separation and dissolution/amendment of the AEP  
8 Interconnection Agreement (also referred to as the generation “Pool” agreement).  
9 I am also AEP Ohio’s overall policy witness supporting the Stipulation’s solution  
10 for the capacity charge paid by Competitive Retail Electric Service (CRES)  
11 providers for use of AEP Ohio’s capacity to support retail shopping. In this  
12 regard, I discuss the parties’ litigation positions and demonstrate the reasonable  
13 and balanced compromise reached in the Stipulation.

14 **BACKGROUND ON CAPACITY CHARGE ISSUES**

15 **Q. CAN YOU BRIEFLY EXPLAIN THE PJM INTERCONNECTION’S**  
16 **CAPACITY MARKET CONSTRUCT?**

17 Yes. In 2007, PJM Interconnection, LLC (PJM) implemented a capacity market  
18 pricing construct known as Reliability Pricing Model (RPM). Prior to 2007, and  
19 during the RPM auction development phase, AEP, as well as other parties,  
20 expressed concern over the long-term negative impacts of the RPM capacity  
21 market on vertically integrated utilities and their customers. A special provision  
22 was drafted to ensure that those entities could request a cost-based method of  
23 recovering their capacity costs – Section D.8 of Schedule 8.1 (Schedule D) of the

1 PJM Reliability Assurance Agreement (RAA); this provision is known as the  
2 Fixed Resource Requirement (FRR).

3 **Q. WHY WAS THE FRR OPTION DEVELOPED AS ANOTHER METHOD**  
4 **FOR SUPPLYING CAPACITY?**

5 A. It was important to have an appropriate mechanism for Load Serving Entities  
6 (LSEs) that owned or controlled sufficient generation to meet their own load and  
7 reserve margin obligations. AEP advocated strongly at FERC and during the  
8 stakeholder negotiations for the FRR option. This option was important to AEP,  
9 because:

- 10 • FRR was consistent with the Company's regulatory framework.  
11 AEP utilities in PJM were among the few remaining vertically  
12 integrated utilities that retained their generation to meet the load  
13 obligations of their customers. For AEP, the FRR mechanism  
14 allowed it to continue to recover its embedded generation costs  
15 associated with the customers it serves through existing  
16 Commission approved rate structures. Conversely, many of the  
17 other PJM utilities have segregated their load from their  
18 generation, either by divesting their generation to third parties or  
19 transferring it to affiliated generation companies.
- 20 • It did not make sense for AEP to offer its own generation into a  
21 capacity auction and then essentially be required to buy it back to  
22 satisfy its load obligation, since the Company had sufficient  
23 generation to meet its own load obligation.

1                   • AEP was at risk for being required to purchase more capacity than  
2                   necessary because of the potential for the RPM auction to clear at a  
3                   higher reserve margin level than the Company carried on its  
4                   system.

5   **Q.   HOW DID FERC RULE ON FRR IN ITS INITIAL OPINION?**

6   A.   FERC agreed that it was not necessary or appropriate to force utilities such as  
7       AEP to participate in the RPM auction. In their April 20, 2006 Initial Order,  
8       FERC states in paragraph 110 that “We agree with AEP that LSEs and states  
9       should have the option of choosing an alternative to the forward procurement  
10      auction if they identify sufficient capacity to meet their loads...”

11           At that point, as part of the settlement process at FERC, PJM and the PJM  
12      stakeholders entered into negotiations to develop the FRR process. These  
13      deliberations focused on the preparation of rules that enabled utilities such as AEP  
14      to meet their capacity obligations through use of their own generation (including  
15      bi-lateral arrangements) and to maintain reserve margins established by the PJM  
16      planning process rather than through the auction process. This provided benefits  
17      to native load customers by giving the LSEs choices for meeting capacity  
18      requirements.

19   **Q.   DID THIS COMMISSION’S STAFF VOICE SUPPORT FOR THE FRR**  
20   **PLAN UPON ITS INCEPTION?**

21   A.   Yes. The Commission staff referred to FRR in public comments filed at FERC  
22       provided in advance of a FERC Staff Technical Conference on June 7, 2006. In  
23       the first sentence of their comments, the Commission staff said they “would like

1 to compliment the FERC for accepting the traditional resource requirement  
2 approach (the Fixed Resource Requirement option) as a legitimate alternative to  
3 RPM. The Ohio Staff would like to request that, in developing the rules for the  
4 two alternatives, the FERC needs to ensure that a resource supplier is treated  
5 equitably in terms of the [Installed Reserve Margin (IRM)] requirement, the  
6 penalties for violating an IRM requirement, and the appropriate length of a  
7 resource commitment, regardless of what alternative the supplier chooses.”

8 **Q. HAS AEP OHIO PARTICIPATED IN PJM’S CAPACITY MARKET AS**  
9 **AN FRR ENTITY?**

10 A. Yes. Since the inception of its membership in PJM, AEP Ohio has participated  
11 exclusively as an FRR entity. Under FRR, there are essentially three alternatives  
12 for pricing capacity provided to CRES providers: 1) a properly designed retail  
13 state compensation mechanism and in the absence of such a mechanism, 2)  
14 default rates based on the PJM RPM capacity auction price, and 3) a method  
15 based on the FRR entity’s costs (a formula cost-based method) or such other cost  
16 basis shown to be just and reasonable. Thus, the FRR is an alternative method to  
17 participating in PJM’s RPM capacity market. Being an FRR entity means that  
18 AEP Ohio has opted out of the RPM capacity market and the entity self-supplies  
19 its own generation resources to match its retail load (plus adequate reserve  
20 margins). More specifically, the LSE supplies its own capacity obligations  
21 through its own generating fleet, or through bi-lateral arrangements with another  
22 supplier. For example, if an LSE has a 100MW capacity obligation and chose  
23 FRR, the LSE could supply this capacity from its own generation fleet without

1 making any payments to PJM. AEP Ohio has self-supplied its capacity as a FRR  
2 entity since the RPM was established in June 2007, thus opting out of the PJM  
3 RPM auction market for purposes of meeting its load obligations each year  
4 through planning year 2014/2015.

5 **Q. PLEASE DESCRIBE THE DEVELOPMENTS LEADING UP TO**  
6 **FURTHER ACTION BY AEP OHIO IN LATE 2010.**

7 Historically, AEP Ohio has been compensated at the adjusted PJM RPM auction  
8 price for supplying capacity associated with load lost to CRES providers who  
9 choose not to self-supply their own capacity. The CRES providers who choose  
10 not to self-supply merely act as a middle-man on capacity flowing from AEP  
11 Ohio. While the RPM auction prices have fluctuated significantly, the auction  
12 price for the next several years have dropped to levels that would prevent AEP  
13 Ohio from receiving anything remotely approaching full compensation from  
14 CRES providers for AEP Ohio capacity costs. The dramatic price drops in the  
15 RPM market caused AEP Ohio to pursue its options under the RAA to establish a  
16 cost-based rate.

17 **Q. WHAT FINANCIAL CONCERNS DROVE AEP OHIO TO SEEK A COST-**  
18 **BASED CAPACITY CHARGE?**

19 A. At 100% shopping, the financial impacts to AEP Ohio if RPM-based pricing were  
20 to remain would exceed \$485M for 2011, \$771M for 2012, and \$971M for 2013.  
21 At a 50% shopping level, the impacts to AEP Ohio could exceed \$242M for 2011,  
22 \$386M for 2012, and \$486M for 2013.

1   **Q.    WHAT ACTION DID AEP OHIO PURSUE TO ESTABLISH A COST-**  
2   **BASED CAPACITY CHARGE?**

3   A.    On November 1, 2010, AEP Ohio filed an application under the PJM RAA and  
4   Section 205 of the Federal Power Act (FPA) to initiate FERC Docket No. ER11-  
5   1995-000. On November 24, 2010, at the direction of FERC, AEP Ohio refiled  
6   its application in Docket No. ER11-2183-000 (This case will be referred to as the  
7   “*Section 205 FERC Application*”). In its *Section 205 FERC Application*, AEP  
8   Ohio proposed cost-based formula tariffs that were based on the Companies’ 2009  
9   FERC Form 1 filings. AEP Ohio’s application proposed to implement an existing  
10   clause within the PJM RAA to change the basis of compensation for use of its  
11   capacity by CRES providers to an AEP Ohio cost-based method. AEP Ohio’s  
12   premise for filing the *Section 205 FERC Application* was that CRES providers  
13   were receiving a subsidy (through payment of a below-cost rate) for their use of  
14   the Companies’ capacity due to the use of RPM auction-clearing prices as the  
15   basis for the capacity charge, even though AEP Ohio was an FRR entity. In  
16   response to the *Section 205 FERC Application*, the Commission initiated Case  
17   No. 10-2929-EL-UNC through a December 8, 2010 Entry (“*Ohio Capacity*  
18   *Charge Docket*”) and the Commission represented to FERC that as of December  
19   8, 2010 it was "adopt[ing] as the state compensation mechanism for the  
20   Companies the current capacity charges established by the three-year capacity  
21   auction conducted by PJM," which is the PJM RPM auction price.

22           On January 20, 2011, FERC issued an Order rejecting the AEP Ohio rate  
23   proposal, not on the merits, but due to the Commission's December 8, 2010 order

1        stating that it was adopting an interim state compensation mechanism. AEP  
2        Ohio's application for rehearing of FERC's January 20, 2011 Order remains  
3        pending before FERC. AEP Ohio also filed a complaint case under Section 206  
4        of the FPA, FERC Docket No. EL11-32-000, seeking modifications to Schedule  
5        D of the RAA that were designed to clarify the original intent as understood by  
6        AEP Ohio (referred to as the "*Section 206 FERC Complaint*"). The purpose of  
7        the *Section 206 FERC Complaint* was to confirm that any state compensation  
8        mechanism must compensate FRR entities for capacity costs through charges  
9        included in retail rates and to preserve the FRR entities' right to submit filings to  
10       establish just and reasonable FRR charges.

11    **LITIGATION POSITIONS OF AEP OHIO AND CRES PROVIDERS**

12    **Q.    PLEASE BRIEFLY SUMMARIZE AEP OHIO'S POSITION IN THE**  
13        ***OHIO CAPACITY CHARGE DOCKET, THE SECTION 205 FERC***  
14        ***APPLICATION AND THE SECTION 206 FERC COMPLAINT.***

15    A.    AEP Ohio's basic position in the pending FERC proceedings and in the *Ohio*  
16        *Capacity Charge Docket* is that the RPM-based pricing mechanism under-  
17        compensates AEP Ohio for the capacity it provides to CRES providers for resale  
18        to shopping retail customers. The impact on AEP Ohio's ability to be  
19        compensated for its costs has become significant due to the sharp downward trend  
20        in RPM auction prices, as well the growth in shopping by AEP Ohio customers  
21        whose CRES providers take advantage of the capacity supplied by AEP Ohio as  
22        opposed to supplying their own capacity.

1           As described and submitted in its Initial Comments filed in the *Ohio*  
2           *Capacity Charge Docket*, AEP Ohio, as a Load Serving Entity (LSE) in PJM,  
3           does not participate in the PJM RPM auction market for the purposes of meeting  
4           AEP Ohio's load obligation. AEP Ohio's Standard Service Offer (SSO)  
5           generation rates for January 2012 through May 2014 are the subject of the  
6           Company's current 2012-2014 Electric Security Plan application (Case Nos. 11-  
7           346-EL-SSO et al.) and are intended to cover AEP Ohio's non-fuel cost of  
8           generation, including the cost of capacity for non-shopping customers. However,  
9           CRES providers who serve shopping customers, and who choose not to self-  
10          supply capacity, are currently required to pay only the PJM RPM-based auction  
11          price. Thus, while these CRES providers are using AEP Ohio's capacity  
12          resources, they (unlike AEP Ohio's non-shopping SSO customers) avoid paying  
13          the embedded generation capacity costs that are on the books of AEP Ohio. AEP  
14          Ohio maintains that it should be allowed just and reasonable compensation from  
15          CRES providers based on AEP Ohio's embedded cost of capacity that will allow  
16          for continued investment in Ohio generation resources.

17   **Q.   WHAT WOULD AEP OHIO'S COST-BASED CAPACITY RATES BE**  
18   **USING 2010 FERC FORM 1 DATA?**

19          AEP Ohio's cost-based formula capacity rates, as calculated by Company witness  
20          Pearce (Exhibits KPD-1 and KDP-2), would be \$327.59/MW-day for CSP and  
21          \$379.23/MW-day for OPCo or \$355.72/MW-day (Exhibit KDP-4) on a combined  
22          basis for AEP Ohio.

1 **Q. IN THE CONTEXT OF LITIGATING THE *OHIO CAPACITY CHARGE***  
2 ***DOCKET*, THE *SECTION 205 FERC APPLICATION* AND THE *SECTION***  
3 ***206 FERC COMPLAINT*, HAVE INTERVENOR PARTIES AGREED**  
4 **WITH AEP OHIO’S POSITION?**

5 No. They have opposed AEP Ohio’s position and have maintained that the RPM-  
6 priced capacity is appropriate and there is no reason to adopt a cost-based  
7 capacity charge. CRES providers argue that adopting a cost-based charge now, at  
8 a time when RPM-based market prices are so low, will have an adverse impact on  
9 current and future retail shopping levels. While CRES parties have not yet been  
10 required to file testimony in the *Ohio Capacity Charge Docket*, it is anticipated  
11 that they would continue to oppose AEP Ohio’s position in a litigated setting. I  
12 briefly mention the CRES position here not to support or undermine it (or even to  
13 fully describe it) but it is simply a point of reference for the Stipulation’s  
14 proposed solution for addressing the capacity charge dispute. It is my  
15 understanding that the CRES position on these matters will be further described  
16 (as a background matter) by Exelon witness Dominguez and Constellation/RESA  
17 witness Fein in their respective testimony supporting the Stipulation.

18 **STIPULATION’S RESOLUTION FOR THE CAPACITY CHARGE DISPUTE**

19 **Q. HOW DOES THE STIPULATION PROPOSE TO ADDRESS THE**  
20 **CAPACITY CHARGE DISPUTE AND RESOLVE THE ASSOCIATED**  
21 **PENDING LITIGATION?**

22 A. The Stipulation, through Paragraph IV.2.b, proposes to resolve the capacity  
23 charge dispute through two primary provisions as well as other related provisions.

1   **Q.     WHAT IS THE FIRST MAJOR COMPONENT OF THE STIPULATION'S**  
2   **PROPOSAL FOR RESOLVING THE CAPACITY CHARGE DISPUTE?**

3   A.    The Signatory Parties recommend, in Paragraph IV.2.b.2 (page 21), to establish a  
4        set aside amount of RPM-priced capacity available as follows: 21% of AEP  
5        Ohio's total retail load in 2012 (based on total kWh retail sales), 29% in 2013  
6        until securitization is completed when it will become 31% for the remaining  
7        portion of 2013 after which securitization is completed (if securitization is  
8        completed prior to January 1, 2013, then the applicable set aside for the entirety of  
9        2013 will be 31%), and 41% in 2014 continuing through the first half of 2015.  
10       These substantial levels of RPM-priced capacity preserve and expand retail  
11       shopping in AEP Ohio's service territory through a brief transition period and,  
12       given that there will be an auction-based SSO beginning in mid-2015, achieve a  
13       fully competitive SSO quicker than a Market Rate Offer (which involves a  
14       minimum of five years to achieve). Moreover, offering capacity at RPM rates as  
15       part of the larger settlement package is an obvious compromise compared to AEP  
16       Ohio's litigation position on these issues.

17           The RPM set aside levels foster considerable potential for the expansion  
18       of competitive market-based rates for significant retail loads within AEP Ohio's  
19       service territory. The 2012 set aside of 21% of AEP Ohio total retail load is  
20       approximately 10,000 GWh, which is roughly equal to the entire 2010 load of  
21       Toledo Edison Company. The potential 2013 set aside of 31% of AEP Ohio total  
22       retail load is approximately 15,000 GWh, which is roughly equal to the entire  
23       2010 load of Dayton Power & Light Company. And the 2014-2015 set aside of

1 41% of AEP Ohio total retail load is approximately 20,000 GWh, which is  
2 roughly equal to the entire 2010 load of Duke Energy-Ohio. As discussed by  
3 Company witness Allen (Exhibit WAA-4), the net present value of the discounted  
4 capacity provided by AEP Ohio to CRES providers under this provision is more  
5 than \$850 million.

6 **Q. WHAT IS THE SECOND MAJOR COMPONENT OF THE**  
7 **STIPULATION'S PROPOSAL FOR RESOLVING THE CAPACITY**  
8 **CHARGE DISPUTE?**

9 A. The Signatory Parties recommend, in Paragraph IV.2.b.1 (page 20), that the  
10 Commission (upon acceptance of the Stipulation) set the capacity charge in Case  
11 No. 10-2929-EL-UNC to be the PJM RPM-based rate except that an interim rate  
12 of \$255/MW-Day effective starting in January, 2012 will be charged to CRES  
13 providers for all shopping above the RPM set aside levels. After May 31, 2015,  
14 the Commission's State Compensation mechanism will expire and the capacity  
15 charge will be the PJM RPM-based capacity rate (consistent with AEP Ohio's  
16 agreement in Paragraph IV.1.q to become an RPM entity by mid-2015). This new  
17 interim capacity charge of \$255/MW-Day will only be charged to CRES  
18 providers for any shopping above the RPM set aside levels established in  
19 Paragraph IV.2.b.3. Even this limited non-RPM interim rate is substantially  
20 lower than the cost-based capacity charges proposed by AEP Ohio and supported  
21 in the testimony of Company witness Pearce. As such, it reflects a significant  
22 compromise and contributes to a balanced package of terms that advance the  
23 public interest.

1   **Q.   WHAT ARE THE OTHER PROVISIONS OF THE STIPULATION**  
2   **RELATING TO THE CAPACITY CHARGE DISPUTE?**

3   A.   In implementing the RPM-priced capacity set aside levels, the Signatory Parties  
4       agreed to “grandfather” the existing shopping load as follows. Paragraph IV.2.b.2  
5       provides that, with regard to customers who are receiving generation service from  
6       a CRES provider as of the time that the Stipulation is filed, the capacity rate to be  
7       paid by the CRES provider to AEP Ohio for that customer’s load will continue to  
8       be charged the otherwise applicable RPM rate for the remaining period that the  
9       contract remains effective (including renewals). The load grandfathered under  
10      this paragraph will be counted toward the RPM-priced set aside limits and will  
11      remain subject to a RPM-priced capacity during the term of the ESP, provided the  
12      contract remains in effect during that period.

13           As is further discussed by Company witness Allen, Paragraph IV.2.b.3  
14      also provides that the set aside of RPM-priced capacity shall be initially allocated  
15      on a *pro rata* basis among the residential, commercial and the industrial classes  
16      based upon projected kWh consumption for a period of approximately 4 months  
17      after the filing of the Stipulation. The RPM-priced capacity set aside shall be  
18      based upon a more detailed set of rules and processes, as discussed by Company  
19      witness Allen.

20           Finally in this regard, Paragraph IV.2.b.4 proposes to resolve the pending  
21      FERC litigation. I am advised by counsel that this provision involves a process  
22      for holding in abeyance the *Section 205 FERC Application* and the *Section 206*  
23      *FERC Complaint* (discussed above) until this Commission issues a final order

1 adopting the Stipulation, after which time the FERC cases will be resolved as they  
2 affect Ohio. In sum, adoption of the Stipulation would resolve both the *Ohio*  
3 *Capacity Charge Docket* and the pending FERC litigation regarding the capacity  
4 charge dispute.

5 **Q. ARE THESE STIPULATION RECOMMENDATIONS REASONABLE**  
6 **AND BALANCED, IN LIGHT OF THE PARTIES' LITIGATION**  
7 **POSITIONS?**

8 A. Yes. Absent the Stipulation, AEP Ohio's position is that it is entitled to collect a  
9 cost-based capacity charge for all shopping load served by CRES providers.  
10 Intervenor parties have taken the position that the existing interim RPM-based  
11 compensation mechanism adopted by the Commission in the *Ohio Capacity*  
12 *Charge Docket* should continue into the next ESP term. Thus, the Signatory  
13 Parties' proposed resolution of the capacity charge dispute is a reasonable result  
14 as part of the package of arm's length bargaining settlement terms contained in  
15 the Stipulation. Indeed, the hybrid solution of part RPM and part cost-based  
16 pricing resolves the disparate litigation positions of the parties through a classic  
17 middle ground compromise; this approach is inherently reasonable.

18

19 **BACKGROUND REGARDING THE AEP INTERCONNECTION AGREEMENT**  
20 **(ALSO KNOWN AS THE AEP GENERATION "POOL")**

21

22 **Q. PLEASE PROVIDE A GENERAL DESCRIPTION OF THE AEP**  
23 **INTERCONNECTION AGREEMENT (POOL).**

24 A. The Pool was formulated in 1951 and is a FERC-approved wholesale power  
25 pooling agreement. CSP, OPCo, Indiana & Michigan Power Company,

1       Appalachian Power Company, and Kentucky Power Company are the five AEP  
2       East System operating companies (AEP System–East Zone) which are members  
3       of the AEP Power Pool established pursuant to the Pool. Although each operating  
4       company owns specific generating facilities, the AEP System–East Zone is  
5       designed, built and operated on an integrated system basis and member companies  
6       collectively participate to supply capacity. The Pool defines the rights and  
7       obligations of the five East Zone operating companies (each called a member) and  
8       sets out the methodology for allocating the responsibilities among the members.

9       **Q.   WHAT ARE THE MAJOR PROVISIONS OF THE POOL AND HOW DO**  
10       **THEY OPERATE?**

11      A.   Significant provisions of the Pool operate as follows:

- 12           • Each member is required to provide adequate generating facilities (or  
13           resources) to meet its firm load requirement.
- 14           • A demand allocator is established on the basis of each member's highest  
15           non-coincident peak (NCP) in the preceding twelve months. Member  
16           Load Ratio (MLR) is the ratio of a member's highest NCP in relationship  
17           to the total of all members' highest NCP demand in the preceding twelve  
18           months.
- 19           • There is a capacity settlement that equalizes reserve margins by assigning  
20           responsibility to each member for its MLR share of System capacity. To  
21           the extent that a member's capacity is less than its System responsibility,  
22           such deficit company is required to make up its shortfall by paying a

1 capacity charge to the surplus companies, based on the embedded cost of  
2 capacity of the surplus companies.

3 • Sales and purchases of energy among the member companies are provided  
4 at cost through primary energy transactions.

5 • Transmission facilities are made available to all members for the delivery  
6 and receipt of power; as members of PJM, each AEP East operating  
7 company takes transmission service under the FERC-approved OATT  
8 (Open Access Transmission Tariff).

9 • American Electric Power Service Corporation, as agent for the operating  
10 companies, buys and sells into the wholesale market for reliability and  
11 economic purposes [off-system purchases and off-system sales (OSS)].

12 • Off-System Sales margins are shared among members based on MLR.

13 In addition to the generation Pool, there are other agreements among the members  
14 of the East operating companies, most notably the Interim Allowance Agreement  
15 (IAA) that operates in conjunction with the Pool.

16 **Q. HOW HAS THE POOL WORKED SINCE THE AEP-EAST COMPANIES**  
17 **JOINED PJM?**

18 A. AEP integrated its east zone facilities into PJM in October 2004. After joining  
19 PJM, AEP is performing the same or similar functions as it did prior to joining an  
20 RTO, however, with the requirements of integrating with PJM, some additional  
21 responsibilities have been added, while others have been eliminated or modified.  
22 Since joining PJM, the AEP Pool member companies have participated on an  
23 integrated basis within PJM. Under the Pool, the AEP East operating companies

1 effectively operate as one large company, utilizing the strengths of diversity to  
2 offset inherent risks associated with operating as smaller individual companies in  
3 PJM. This means that each member's customers receive low embedded cost  
4 capacity and energy regardless of their individual generation supplies while also  
5 receiving the benefit of sharing the margins of off-system sales and the  
6 opportunity to purchase economic energy to offset more expensive market energy.  
7 Due to AEP's election to participate in the Fixed Resource Requirement (FRR)  
8 option and as a result of the Pool construct, the cost to purchase capacity from  
9 other Pool Members is based on the embedded cost of installed capacity. From a  
10 cost of energy perspective, the Pool member companies sell or buy surplus energy  
11 to/from other members at a cost-based primary energy rate in addition to  
12 purchasing economic energy from the market at the Locational Marginal Price  
13 (LMP).

14 **Q. GENERALLY SPEAKING, HOW WOULD ONE OF THE AEP-EAST**  
15 **OPERATING COMPANIES OPERATE IF THE POOL WERE**  
16 **TERMINATED?**

17 A. An AEP company operating without the Pool on a stand-alone basis would have  
18 more restrictive requirements and more limited opportunities. If the operating  
19 companies were to operate on a stand-alone basis, fulfilling the reserve  
20 requirement would depend in part on each company's capacity length. From a  
21 cost of energy perspective, the Pool member companies sell or buy surplus energy  
22 to/from other members at a cost-based primary energy rate in addition to  
23 purchasing from or selling to the market at the LMP. A stand-alone company

1        lacking energy needed to meet its hourly load requirement would purchase from  
2        or sell to the PJM market at the LMP, without the cost-based option the Pool  
3        provides to its members.

4        **Q.    HAS AEP GIVEN NOTICE THAT IT INTENDS TO TERMINATE THE**  
5        **POOL?**

6        A.    Yes. On December 17, 2010, AEP Ohio and other parties to the Pool provided  
7        written notice to each other of their mutual desire to terminate the existing  
8        agreement on three years notice in accordance with Article 13.2. The IAA  
9        (discussed above) would also be terminated concurrently with the AEP Pool.  
10       AEP has committed to enter into discussions with this Commission and other state  
11       commissions and stakeholders concerning the termination and whether any new  
12       affiliate agreement should replace it. These discussions are expected to continue  
13       through 2011 and perhaps longer.

14       **Q.    DOES THIS MEAN THAT AEP HAS DETERMINED THAT**  
15       **TERMINATION OF THE POOL IS THE APPROPRIATE SOLUTION**  
16       **FOR ALL OF THE FIVE AEP-EAST OPERATING COMPANIES?**

17       A.    Not necessarily. Aside from the corporate separation driven requirement for AEP  
18       Ohio to secede from the Pool, there will likely be some debate and discussion  
19       about the best course of action for the other three AEP-East operating companies.  
20       Whether a particular operating company and its customers benefit through  
21       modification or dissolution of the Pool depends on the variables such as future  
22       market prices for electricity, plant retirements, and extended plant outages. These  
23       are matters that each operating company's regulatory jurisdiction is likely to

1 consider and evaluate as a stakeholder in the FERC process for changing or  
2 eliminating the Pool. There may be a need to re-balance the generation assets  
3 among the members as part of terminating the Pool. The outcome of these  
4 variables may have the potential to influence or affect retail rates in jurisdictions  
5 that regulate generation prices.

6 These factors may tend to suggest that the Pool modification or  
7 termination process will be somewhat complex and may not yield quick results.  
8 But since it is largely driven by compliance with Ohio's corporate separation  
9 requirement and the need to adjust or dissolve the Pool based on AEP Ohio's  
10 generation divestiture, it should be driven to conclusion in a reasonable period of  
11 time and without much doubt as to the end goal of taking AEP Ohio out of the  
12 Pool. Whether the Pool remains for some combination of the other three AEP-  
13 East operating companies is a matter for debate among those companies, their  
14 stakeholders and respective regulatory jurisdictions.

15 **FERC FILINGS FOR POOL TERMINATION/MODIFICATION AND**  
16 **CORPORATE SEPARATION**

17  
18 **Q. WHAT FERC FILINGS ARE NEEDED TO IMPLEMENT POOL**  
19 **TERMINATION OR MODIFICATION, IN THE CONTEXT OF**  
20 **IMPLEMENTING CORPORATE SEPARATION FOR AEP OHIO?**

21 A. I have been advised by counsel that there are two sets of filings required in order  
22 to dissolve and/or modify the Pool in the context of corporate separation of AEP  
23 Ohio's generation function. First, FERC filings would be made under Section  
24 205 of the FPA to (1) dissolve and/or modify the Pool, (2) substitute new  
25 agreements address the Pool's dissolution and/or modification, and (3) address the

1 rate impacts, if any, from corporate separation of AEP Ohio. Second, a FERC  
2 filing would be made under Section 203 of the FPA for approval of AEP Ohio's  
3 corporate separation.

4 **Q. WHAT IS THE TIMELINE FOR GETTING FERC'S APPROVAL FOR**  
5 **POOL TERMINATION/MODIFICATION AND CORPORATE**  
6 **SEPARATION?**

7 A. The FERC filings will be pursued upon receiving a final order from this  
8 Commission adopting the Stipulation. As set forth in Appendix B of the  
9 Stipulation, AEP Ohio anticipates that the Section 205 filings and the Section 203  
10 filings will both take approximately 450 days. The final schedule for these filings  
11 will be established by FERC.

12 **STIPULATION PROVISIONS RELATING TO THE POOL**  
13

14 **Q. WHAT ARE THE MAJOR PROVISIONS OF THE STIPULATION**  
15 **RELATING TO POOL TERMINATION/MODIFICATION AND**  
16 **CORPORATE SEPARATION APPROVAL BEFORE THE FERC?**

17 A. As will be further described below, the Signatory Parties have agreed to the  
18 following provisions:

- 19 • AEP Ohio will, upon receiving a final order from this Commission  
20 authorizing full legal corporate separation, provide notice to PJM that it  
21 intends to participate in the RPM Base Residual Auction for delivery  
22 years 2015-2016. (Paragraph IV.1.q, page 11)
- 23 • A schedule is set forth for conducting a Competitive Bidding Process  
24 (CBP) to supply its SSO for delivery within the ESP term during the

1 period from June 1, 2015 through May 31, 2016 (Paragraph IV.1.r), such  
2 that auctions are conducted in 2013, 2014 and 2015 leading up to that  
3 delivery period. The auction schedule is tied to other agreed provisions  
4 that are designed to ensure that AEP Ohio expeditiously obtains FERC  
5 approvals for corporate separation and Pool termination/modification  
6 either by September 2013 or in the most expeditious manner reasonably  
7 possible (Paragraph IV.1.t, page 15).

- 8 • The Signatory Parties agree to support the Pool termination/modification  
9 to be filed at FERC. As a related matter, the Signatory Parties agreed to  
10 establish a Pool Modification Rider (with an initial rate of zero), subject  
11 to FERC approval of the Pool termination/modification and other  
12 specified conditions. (Paragraph IV.5, page 25)

13 **Q. WITH RESPECT TO THE FIRST MAJOR PROVISION DESCRIBED**  
14 **ABOVE (PARAGRAPH IV.1.q, PAGE 11), PLEASE DESCRIBE THE**  
15 **SPECIFIC TIMELINES RECOMMENDED BY THE SIGNATORY**  
16 **PARTIES FOR FERC APPROVAL OF CORPORATE SEPARATION AND**  
17 **POOL TERMINATION/MODIFICATION .**

18 A. The specific timelines agreed to by the Signatory Parties are reflected in  
19 Appendix B to the Stipulation. The estimated timelines for the required Section  
20 203 and Section 205 FERC proceedings involve a 450-day period to conduct the  
21 FERC proceedings, which would be initiated after receiving a final order from  
22 this Commission adopting the Stipulation. Whatever schedule is established by

1 FERC, AEP Ohio agrees to diligently pursue approval of its Section 203 and 205  
2 applications under the established schedule.

3 **Q. WITH RESPECT TO THE SECOND MAJOR PROVISION DESCRIBED**  
4 **ABOVE (PARAGRAPH IV.1.t, PAGE 15), WHY WERE THESE**  
5 **MATTERS ADDRESSED IN THE STIPULATION?**

6 A. These provisions reflect the fundamental arm's length bargain negotiated by the  
7 Signatory Parties, being that AEP Ohio would agree to sustain a fully-competitive  
8 SSO after executing a brief interim plan for efficiently transitioning from "point  
9 A" to "point B." In other words, these provisions recognize that AEP Ohio must  
10 achieve corporate separation and Pool termination/modification in order to  
11 transition from its current regulatory and business structure to one that involves an  
12 auction-based SSO. These provisions are based on two common understandings  
13 among the Signatory Parties: (i) Pool termination/modification is needed when  
14 AEP Ohio corporately separates its generation function, and (ii) Pool  
15 termination/modification and corporate separation are both needed in order for  
16 AEP Ohio to effectively and prudently conduct an auction-based SSO.

17 As referenced above, corporate separation clearly precipitates secession  
18 from the Pool by AEP Ohio. It cannot reasonably be disputed that removing AEP  
19 Ohio's substantial generation assets from the Pool cannot be achieved without  
20 terminating or modifying the Pool. Regarding the second common understanding,  
21 it is understood by the Signatory Parties that AEP Ohio could not prudently  
22 establish an auction-based SSO as long as it owns generation assets and remains a  
23 member of the AEP generation Pool, for two primary reasons.

1 First, conducting an SSO auction would have substantial impacts on the  
2 other Pool members and would expose both AEP Ohio and the other AEP-East  
3 operating companies to cost recovery risks in their respective regulated  
4 jurisdictions. Second, conducting an auction prior to corporate separation would  
5 create a financial exposure for AEP Ohio by wholly displacing the cost recovery  
6 for those generation assets that currently exists through SSO generation rates  
7 (based on the generation assets being dedicated to support retail generation  
8 service). It would also potentially remove the AEP Ohio generation from  
9 participating in the auction, due to the timing difference of the auction delivery  
10 period and the post-separation generation affiliate not yet owning the assets in  
11 order to be able to support bids into the forward auction with those generation  
12 assets.

13 **Q. PLEASE ADDRESS THE POOL MODIFICATION RIDER**  
14 **ESTABLISHED THROUGH THE THIRD PROVISION DESCRIBED**  
15 **ABOVE (PARAGRAPH IV.5, PAGE 25).**

16 A. The Signatory Parties agreed that a Pool Modification Rider for this purpose with  
17 an initial rate of zero is appropriate. If the impact of the Pool  
18 termination/modification on AEP Ohio during the ESP term is greater than \$50  
19 million prior to May 31, 2015, the Company may pursue cost recovery of the  
20 entire impact during the ESP term via a separate RDR application during the ESP  
21 term and obtain approval by the Commission.

22 **Q. WHY DO YOU BELIEVE THIS PROVISION IS REASONABLE?**

1 A. AEP Ohio's application in Case Nos. 11-346-EL-SSO proposed to recover  
2 material costs associated with the anticipated Pool termination/modification. As  
3 part of the package of terms contained in the Stipulation, the Signatory Parties  
4 agreed to this provision. I would note that the Signatory Parties reserved the right  
5 to challenge the amount and the recovery of these costs before the Commission  
6 and the FERC. Thus, even assuming the Pool termination/modification will cause  
7 an impact on AEP Ohio of more than \$50 million and exceed the materiality  
8 threshold applicable to potential recovery under this provision, the ultimate issue  
9 of whether AEP Ohio would recover such costs is the subject of a future  
10 Commission proceeding.

11  
12 **CONCLUSION**

13 **Q. PLEASE SUMMARIZE YOUR TESTIMONY.**

14 A. I sponsor two major provisions within the Stipulation, both of which help resolve  
15 complex issues based on varied interests and disparate litigation positions. First,  
16 the Stipulation adopts a balanced and reasonable solution for the capacity charge  
17 dispute in Ohio, by proposing a hybrid approach that preserves and expands  
18 substantial retail shopping using RPM-priced capacity of AEP Ohio while also  
19 providing for a higher capacity charge (that is still well below AEP Ohio's cost-  
20 based litigation position) for remaining shopping levels – all during a transition  
21 period which ends with RPM-priced capacity for all shopping. Second, the  
22 Stipulation resolves longstanding issues regarding corporate separation and the  
23 dissolution or modification of the AEP Interconnection Agreement (generation

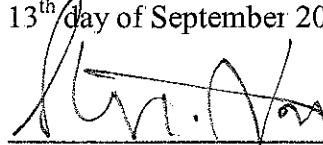

1 Pool) by adopting definite milestones and incentives for stakeholders to achieve  
2 corporate separation and Pool restructuring. In sum, both of these major  
3 provisions are framed by varying litigation positions and being mutually and  
4 reasonably resolved through a compromise result based on arm's length  
5 bargaining.

6 **Q. DOES THAT CONCLUDE YOUR TESTIMONY IN SUPPORT OF THE**  
7 **STIPULATION?**

8 A. Yes.

### CERTIFICATE OF SERVICE

I hereby certify that a copy of the testimony of Richard E. Munczinski was served on the persons stated below via electronic mail, this 13<sup>th</sup> day of September 2011.

Summary: Testimony Testimony of Richard E. Munczinski electronically filed by Mr. Steven T Nourse on behalf of American Electric Power Service Corporation
