PUCO Commissioners

Subject: Ramp-up Energy Efficiency in Ohio!

Dear PUCO Commissioners,

As an electric customer and an Ohioan I urge you to ensure all of Ohio's utilities are pursuing all cost-effective energy efficiency.

Many Ohio electric utilities are evaluating the economic viability of their aging fleets of coal plants, and retiring the oldest and dirtiest plants. This is critical to reducing air pollution and improving the health of our communities. Additionally, these coal plant retirements create the opportunity to transition to clean energy solutions.

Ohio's energy law calls for minimum annual energy efficiency benchmarks for utilities to meet. The law is creating jobs where they are needed most and securing our electric grid while saving customers millions.

Please ensure that utilities are pursuing all cost-effective energy efficiency as a way to curb pollution and create economic growth.

Sincerely,
Mr. David Sheets

Subject: Ramp-up Energy Efficiency in Ohio!

Dear PUCO Commissioners,

For way too many years special interest lobbyists and corrupt or lazy politicians have made it possible for coal fired power plants to get away with spewing poisons into our air. As an electric customer and an Ohioan I have had it with breathing dirty air. While I realize it is not all from coal fired utilities, I know the tide is turning strongly to clean alternatives, and that the technology exists to scrub emissions from existing coal fired power plants. Yes, I am willing to help pay for this via higher utility rates. Nothing is free. I urge you to ensure all of Ohio's utilities are pursuing all cost-effective energy efficiency.

Many Ohio electric utilities are evaluating the economic viability of their aging fleets of coal plants, and retiring the oldest and dirtiest plants. This is critical to reducing air pollution and improving the health of our communities. Additionally, these coal plant retirements create the opportunity to transition to clean energy solutions. Wind and Solar power are fast becoming viable alternatives.

Ohio's energy law calls for minimum annual energy efficiency benchmarks for utilities to meet. The law is creating jobs where they are needed most and securing our electric grid while saving customers millions.

PUCO Commissioners

Subject: Ramp-up Energy Efficiency in Ohio!

Dear PUCO Commissioners,

As an electric customer and an Ohioan I urge you to ensure all of Ohio's utilities are pursuing all cost-effective energy efficiency.

Many Ohio electric utilities are evaluating the economic viability of their aging fleets of coal plants, and retiring the oldest and dirtiest plants. This is critical to reducing air pollution and improving the health of our communities. Additionally, these coal plant retirements create the opportunity to transition to clean energy solutions.

Ohio's energy law calls for minimum annual energy efficiency benchmarks for utilities to meet. The law is creating jobs where they are needed most and securing our electric grid while saving customers millions.

Please ensure that utilities are pursuing all cost-effective energy efficiency as a way to curb pollution and create economic growth.

Sincerely,
Ms. Rebecca Leibreich

Subject: Ramp-up Energy Efficiency in Ohio!

Dear PUCO Commissioners,

As an electric customer and an Ohioan I urge you to ensure all of Ohio's utilities are pursuing all cost-effective energy efficiency.

Many Ohio electric utilities are evaluating the economic viability of their aging fleets of coal plants, and retiring the oldest and dirtiest plants. This is critical to reducing air pollution and improving the health of our communities. Additionally, these coal plant retirements create the opportunity to transition to clean energy solutions.

Ohio's energy law calls for minimum annual energy efficiency benchmarks for utilities to meet. The law is creating jobs where they are needed most and securing our electric grid while saving customers millions.

Please ensure that utilities are pursuing all cost-effective energy efficiency as a way to curb pollution and create economic growth.

Sincerely,
Ms. Wanda Huelsman

Subject: Ramp-up Energy Efficiency in Ohio!

Dear PUCO Commissioners,

As an electric customer and an Ohioan I urge you to ensure all of Ohio's utilities are pursuing all cost-effective energy efficiency.

Many Ohio electric utilities are evaluating the economic viability of their aging fleets of coal plants, and retiring the oldest and dirtiest plants. This is critical to reducing air pollution and improving the health of our communities. Additionally, these coal plant retirements create the opportunity to transition to clean energy solutions.

Ohio's energy law calls for minimum annual energy efficiency benchmarks for utilities to meet. The law is creating jobs where they are needed most and securing our electric grid while saving customers millions.

Please ensure that utilities are pursuing all cost-effective energy efficiency as a way to curb pollution and create economic growth.

Sincerely,
Ms. Nicole Dixon

Subject: Ramp-up Energy Efficiency in Ohio!

Dear PUCO Commissioners,

As an electric customer and an Ohioan I urge you to ensure all of Ohio's utilities are pursuing all cost-effective energy efficiency.

Many Ohio electric utilities are evaluating the economic viability of their aging fleets of coal plants, and retiring the oldest and dirtiest plants. This is critical to reducing air pollution and improving the health of our communities. Additionally, these coal plant retirements create the opportunity to transition to clean energy solutions.

But simply retiring old, dirty coal plants is not enough. We need to replace them with solid, sustainable, environmentally responsible sources of energy. And doing so can provide much needed jobs for Ohioans in addition to powering our future.

Ohio's energy law calls for minimum annual energy efficiency benchmarks for utilities to meet. The law is creating jobs where they are needed most and securing our electric grid while saving customers millions.

Please ensure that utilities are pursuing all cost-effective energy efficiency as a way to curb pollution and create economic growth.
