## EXHIBIT C <br> (Description of Changes)

In this application, Ayersville Telephone Company requests BLES pricing flexibility to increase its BLES rates for both business and residential customers by $\$ 1.25$ per month in its Ayersville Exchange. Obtaining flexible pricing at this point in time is essential for the Company to make progress in reaching the Universal Service Fund "urban rate floor" set forth in the FCC's USF/ICC Transformation Order (FCC 11-161).

Effective July 1, 2012, incumbent local exchange carriers receiving Federal high-cost support had that support reduced if their residential basic local rates were less than $\$ 10.00$ per month. Effective July 1, 2013, the threshold will be increased to $\$ 14.00$. On July 1, 2014, the threshold will be set according to a new nationwide survey. The last survey was done in 2007, and the average rate then was $\$ 15.62$. The surveyed rates have gradually increased over the years, and Ayersville believes that the rate used for the July 1, 2014, rate floor will probably be higher than $\$ 15.62$.

## EXHIBIT D

(Customer Notices)
The following customer notice will appear on bills that are mailed to customers on May 15, 2013. This notice will also be sent to the Office of Consumers' Counsel and to the Commission's electronic mailbox (TelecommRule07@puc.state.oh.us) no less than thirty days prior to the rate increase:

Effective June 15, 2013, our local telephone rates for residential and business customers will increase by $\$ 1.25$ per month, from $\$ 12.35$ to $\$ 13.60$ for residential customers and from $\$ 15.70$ to $\$ 16.95$ for business customers. Many rural telephone companies, including Ayersville Telephone Company, receive support from the Federal Universal Service Fund. New rules reduce such support if a telephone company's local rates are below the national average. The $\$ 1.25$ increase is necessary to bring our local rates more in line with the national average and to avoid a reduction in our Federal Universal Service Fund Support.

If you have any questions about the revised rates, please call our office at (419) 395-2222.

## EXHIBIT E <br> (Demonstration of Alternative Providers)

Pursuant to R.C. 4927.12(C)(3)(a) and Ohio Administrative Code 4901:1-6-14, Ayersville Telephone Company may not increase its BLES rates for an exchange area unless it first applies to the Public Utilities Commission of Ohio and the Commission determines that the application demonstrates that two or more alternative providers offer, in the exchange area, competing service to the BLES service offered by the company, regardless of the technology and facilities used by the alternative provider, the alternative provider's location, and the extent of the alternative provider's service area within the exchange area. An alternative provider, under R.C. 4927.12(C)(3)(a), includes a telephone company, including a wireless service provider, a telecommunications carrier, and a provider of internet protocol-enabled services, including voice over internet protocol.

The Commission has not previously determined that Ayersville Telephone Company's exchange qualified for alternative regulation of BLES.

In accordance with R.C. 4927.12(C)(3)(a), the attached information demonstrates that two or more alternative providers offer competing service to the BLES service offered by Ayersville Telephone Company in its exchange, namely Verizon Wireless, AT\&T Mobility, Time Warner Cable and Sprint.

Coverage Check

This tool provides high-level estimates of our wireless coverage. Coverage is not available everywhere and varies based on a number of factors. > Learn more

Our coverage maps provide high-level estimates of our coverage areas when using your device outdocrs under optimal conditions. Coverage isn't available everywhere. Estimating wireless coverage and signal strength is not an exact science

There are gaps in coverage within our estimated coverage areas that, along with other factors both within and beyond our control (network problems, software, signal strength, your wireless device, structures, buildings, weather, geography, topography, etc.), will result in dropped and blocked connections, slower data speeds, or otherwise impact the quality of services.

Services that rely on location information, such as E911 and GPS navigation, depend on your device's ability to acquire satellite signals (typically not avaidable indoors) and network coverage. E911 services also depend on local emergency service provider systemsisupport. Estimated future coverage subject to change.
