

Case No. 14-0438-EL-REN
Martin Earle
Staff Interrogatories - Initial Set

Question 1: According to the four pictures provided in the application, the facility consists of a total of 20 SPV panels. However, the application mentions a total of 21 panels. This is further corroborated by the facility's nameplate capacity of 7.245 kW: each panel is rated at 345 W, and $21 \times 345 \text{ W} = 7.245 \text{ kW}$. Please explain this discrepancy, making it clear of how many panels the facility consists.

Answer 1: Additional panel photo – see below:
