F. Certification Criteria 1: Deliverability of the Generation into Ohio

Ohio Revised Code (ORC) Sec. 4928.64(B)(3)

The facility must have an interconnection with an electric utility.

Check which of the following applies to the facility's location:

Yes The facility is located in Ohio.

No The facility is located in a state geographically contiguous to Ohio (IN, KY, MI, PA, WV).

No The facility is located in the following state:

(If the renewable energy resource generation facility is not located in Ohio, Indiana, Kentucky, Michigan, Pennsylvania, or West Virginia, you are required to submit a POWER FLOW study by one of the regional transmission organizations (RTO) operating in Ohio, either PJM or Midwest ISO, demonstrating that the power from the facility is physically deliverable into the state of Ohio. This study must be appended to the application as an exhibit. THE FACILITY MUST BE INTERCONNECTED TO TRANSMISSION LINES. FOR ADDITIONAL INFORMATION ON DELIVERABILITY REQUIREMENTS, PLEASE REFER TO THE COMMISSION FINDING & ORDER of 3/23/11 IN CASE NO. 09-555-EL-REN.)

G. Certification Criteria 2: Qualified Resource or Technology

You should provide information for only one resource or technology on this application; please check and/or fill out only one of the sections below. If you are applying for more than one resource or technology, you will need to complete a separate application for each resource or technology.

G.1. For the resource or technology you identify in Sections G.4 - G.13 below, please provide a written description of the system.

The Artemis array is ground mounted next to our building. The 222 solar panels are secured in racks made by RBI Solar, Cincinnati, Ohio. The panels are Hyundai SG series Model HiS-M227SG. There are 17 strings @ 13 panels per string on two 130 foot racks. The strings are fed to a Solar BOS combiner box/disconnect at the end of each rack.

Combiner boxes are fed to the AE Solar inverter model PVP52n KW rated at 50 KW, 480 volts DC.

AC power from the inverter goes to an AC disconnect adjacent to the Ohio Edison/First Energy service point. The disconnect is an ITE HNF 363R 100 amp 600 volt unit. The AC power is interconnected with the Ohio Edison Utility Meter at the Siemens MDP 800 amp service point. The fuse switch is a 3 pole 100 amp switch.

G.2. Please include a detailed description of how the output of the facility is going to be measured and verified, including the configuration of the meter(s) and the meter type(s).

Power from the array combiner boxes goes to the "revenue meter." a GE KV2C multifunctional meter. The meter records KW hours & KW. There is a meter on the inverter also.

G.3. Please submit digital photographs that depict an accurate characterization of the renewable generating facility. Please indicate the date(s) the photographs were taken. For existing facilities, these photographs must be submitted for your application to be reviewed. For proposed facilities or those under construction, photographs will be required to be filed within 30 days of the on-line date of the facility.
