To all voting and non voting members of the OPSB,

thank you sincerely for all your help this week.

I do find it very callous, inconsiderate, rude & downright ignorant that, according to Windlab and their wonderful research on the people who are opposing this project, my property is not considered "important" because I'm only a mere 717 feet away from this disaster & waste of taxpayer money project.

fascinating how they want to research me now but no one even let us know anything about this big horrible scam while it was in process for 4 years!

ruining the socioeconomic status of this community, property values plummeting, people worried about their health, etc!

I love how they continue to refer to this area as "agricultural" when wind turbine 14 has over 550 homes within a mile and a half and I guess those people aren't important either!

I submit that every single person who presented in opposition had a good reason to, and they are part of this community, this county, this state, and their voice matters more than some foreign company that

Technician Jim Date Processed JUN 16 2014

doesn't care about us, only wants (wasted) govt money. a company that built a project in Canada and then quickly sold it. a company that lies, a company that scams from the very beginning, as evidenced by: the main people knowing about this project were the leaseholders and the "important" people that they have scammed.

if they want to continue doing the research they will research and find out that no one no one no one wants them here except for the people they have tricked into leasing them land.

please do not be so ignorant as to not see the dishonesty of this company. recommendations all over the world show that turbines should be 3 miles away from people and residences and highways parks schools. the people who have submitted opposition are part of this community, they care more about their house and their babies and their kids and their quality of life and their sleep than pleasing some foreign company receiving our tax dollars.

it also deeply saddens me that our beautiful public school is within 2 miles of 3 of these monstrous beasts, and our park is within 2 miles of 7 of these wasteful giants. Yet, the worldwide research shows that the effects to sleep and mental well-being are over 3 miles. this company does not care about our children.

this goes right along with their theme. the whole entire 73 page reports reports nothing nothing nothing on the research done that shows these things are safe for people to be around. that shows the infrasound does not harm your vestibular organs and every organ in your entire body. nothing shows there safe work fetuses babies kids elderly population people with migraine disorder inner ear disorder artistic kids etc. on the contrary the head of Harvards vestibular Department is currently diagnosing people with wind turbine syndrome. funny how they are so steadfast to research the homes of the people who are in opposition but they are so clueless about the masses , thousands of people around the world who have been made sick by these beasts that produce that affects every cell in your body. the infrasound that caused 1600 miscarriages in a Danish mink fur farm. yeah that infrasound, they said was simply "rhetoric." yet a Canadian doctor who has researched the infrasound reports that approximately one in three people will have negative health symptoms.

please put this in the public record.

sincerely ,

Mrs. Valerie Malicki, MA, LPCC

(I know I only live 717 feet away from the property line but I'm still a person too, with a family and children - who wants to live a healthy life and have more healthy children who can concentrate and get sleep in our own home)
