Dear OPSB and Monica Jensen,

Monica, as you know we had a meeting as I was directed by the OPSB. You said you wanted to answer my questions. There are several questions i still have. I am seeking some information to clarify. You assured me that you would be happy to answer questions.

Monica, I would like to know how many industrial wind turbine power stations Windlab currently operates, as in, they are currently operational and Windlab currently own them. Where are these owned and operating turbine power stations located?

Monica, I would like please contact information for Luke Osbourne. Monica, you told me he lives under the wind project in New South Wales Australia. I would like his email.

Monica, I also would like exact measurements and distances of the proposed industrial wind turbines that are within 3 miles, and 1.25 miles, respectively, of our schools and our parks (two schools , including Mennonite School, 7 parks). I would like to know how close the turbine will be Greenwich Reservoir Park & I would like to know how close the turbine will be to Greenwich Local Schools.

Monica, I would like to know how many homes, like my home, are within 1.25 miles of the proposed industrial wind turbines.

Thank you in advance.

Sincerely,

Valerie C. Malicki, MA, LPCC

Dear OPSB and Monica,

Monica, you reported Windlab has been researching this area for over four years.

I did not intend to ask hard questions.

Firstly, in the "soup to nuts" research surely the number of homes 1.25 miles from the turbines has been measured, has it not?

Thank you for happily and promptly answering this question, to both myself, and to the OPSB as well.

Cheers,

Valerie C. Malicki, MA, LPCC

Subject: Re: Info

Dear OPSB and Monica,

Please place this in the public docket , and also my previous emails requesting information regarding this commercial wind turbine project, including the date these questions were asked.

Again, after researching our poor, impoverished, uneducated(8th grade is highest level for many), out of touch (many are not even aware of worldwide, scientific research, or even have access to it) community for over four years, and wanting to "help us out" one would think answers to these questions would be "no-brainers." Questions like how far away our schools are, but mainly, how many homes are 1.25 miles away? That is the first question that I find imperative for the OPSB and myself to promptly know.

These really are the easy questions. The more difficult questions would be things like:

1. measuring the infrasound low-frequency noise in my bedroom currently, and then after the 25 turbines, as large as 747 jet airplanes at nearly 500 feet are erected (spinning at 200 miles an hour is it? you tell me).
2. answering my question of how my property will be worth the same amount (over \$100,000-a lot of money-our biggest investment in life), after the turbines have acoustically damaged the inside of my bedroom, and the outside play area for my baby and my two-year-old. The damage being done of course by low-frequency noise emitted from turbines. For clarity, infrasound low-frequency noise (ILFN) is NOT ADDRESSED IN THE STAFF REPORT. (Monica, you reached out your hand to me, and sweetly said something like, "if you want us to do that, we will.")
3. providing real research about the noise emissions from these turbines. this of course would exclude bogus studies done by people who are paid by the wind industry.

Really, those are just a few examples. But instead I'm simply asking the kindergarten questions at this point.

Again, OPSB please be aware, I did not mean to ask hard questions, and am disappointed I have heard nothing back from Monica, in spite of her "promising" to happily answer questions I had. "Absolutely," was the word Monica used I believe.

Monica, kindly looking forward to prompt and accurate responses to questions as you promised me and our community that you care so very much for.

Thank you,

Valerie C. Malicki, MA, LPCC

Subject: Re: Info

Dear OPSB and Monica,

For clarity, please include these emails in the public docket. As I wrote about our community in the previous email, I wrote how it appears we are viewed by this wind company.

For clarity, Greenwich township is neither poor, uneducated, nor out of touch:

1. Our schools currently receive adequate and generous support from local tax paying citizens like myself. Our income tax revenue this year continues to increase, and our schools receive one of the highest percentages of tax revenue in the state. As a community we have approved this because we clearly believe in the importance of education.

2. Our community is intelligent and IS diverse. Greenwich schools has graduated: lawyers, doctors, teachers, successful business men and women, Ivy League school doctorate graduates, successful skilled-trade graduates, family-oriented hard-working folks of many "shapes and sizes." Not to mention we are home to one of the largest dairies in the county which employs much more people long-term (daily!) than a turbine project will ever employ. Not to mention, currently, we are home to doctors, teachers, many successful in business, a published author, retired and hard-working railroad employees, library and postal workers, masters level trained clinicians and social workers, and some more successful small business owners, ETCETERA!

3. Our entire community is becoming more aware of the size and scope of this project, and of the worldwide clinical research that demonstrates that commercial wind turbines NOT to be located near homes. We can read research (and not just bogus studies handed to us that are produced & paid for by the wind industry).

It is important for to clarification to be made. All of our intelligences, including those of the OPSB, have been insulted.

Monica, as an employee of Windlab, a company who reportedly wants to benefit our beautiful and intelligent community, please be forthcoming with answers, and soon.

As stated below, please be forthcoming with answers, especially in regard to these kindergarten-type questions.

And Monica, why have you not been open or willing to address questions our entire community continues to raise? Providing propaganda instead of factual research? Visiting politicians and lease-holders only, instead of addressing the many, many residents in this community whose lives would be forever altered, because your company wants to receive our tax money. You have not been present in our community now, when clearly people have unanswered questions. Please address the questions below that we are all asking.

Thank you kindly, in advance. We look forward to you fulfilling your promises to do so.

Sincerely,

Valerie C. Malicki, MA, LPCC
