Re: Greenwich Windpark, Case No. 13-0990-EL-BGN

Ms. Ledet,

Thank you for contacting the Ohio Power Siting Board (OPSB) regarding the Greenwich Windpark, OPSB Case No. 13-0990-EL-BGN.

Your correspondence will be docketed in the public comments section of the case record. It is noted that you are opposed to the project. Further, I have forwarded your comments, as directed, to the appropriate Board members.

The Greenwich Windpark proposal is currently pending before the Board and, to date, has not been scheduled for the Board's consideration.

Thank you for your interest in this case. If you would like to sign up to receive email notification of upcoming Board agendas and decisions, or if you simply have additional questions, please contact my office at (866) 270-6772.

Sincerely,

Patrick Donlon, Interim Executive Director
Ohio Power Siting Board

PD: sai

cc: Craig Butler, Director, Ohio EPA
David Daniels, Director, Ohio Dept. of Agriculture
Director, Ohio Dept. of Health

To the OPSB and especially To
The Director of Agriculture,

This land is my land, this land
is your land from the red wood
forests to the grey stream waters.
This land was fought for with the
blood of my people and your people,
America, home of the brave, land
of the free.

I am disturbed as I see wind Turbine
project after Wind turbine project
stirring up dust in our farming
communities. This ought not be!

This is farm country where the dust
should come from planting and sowing
crops and reaping a harvest of grain.
These companies are reaping wind but
sowing seeds that are causing a
whirlwind in farm communities all
over Ohio. Pitting neighbor against
neighbor, farmer against neighbor,
farmer against farmer, farm Bureau
against farmer and country folk.
Again... This ought not be!

What on God's green earth has
happened, what is this all about?

are you truly up to date on what is happening here? Are the blind leading the blinder down paths of destruction all in the name of "green" energy?

Are we putting all our eggs in one basket to our demise? As "green" about a money loosing proposition for America and a money making proposition for foreign companies that care not for our welfare, care not for our precious land but care only for "green" profit in the form of dollar bills, and plenty of them. Our production tax credits going to foreign companies on foreign soil is a very sad and mind boggling story for Americans who strive for a better way of life with their sweat.

Sirs, if someone sold you a packet of seeds and you were told that said seeds would only produce 30% of a crop and the sowing of these seeds would reap havoc across your fields would you be rushing to purchase packet after

packet of them. I think not, I hope you are much wiser than that, aren't you?

Are you being sold a bill of goods that is really good for us or is it an exciting "scheme" as some have said in their letters to you?

I beseech you to be careful and wise as you make your decisions concerning our future.

Sincerely,

Marcia Ledet

CASE No. 13-0990-EL-BGN

To the OPSB and....

Dear Director of Health for the State of Ohio
and a member of the Ohio Power siting Board,

I am concerned about your specific
standing on wind turbines as the
Health Director for Ohio. It is my
understanding that your position
should be to protect citizens under
your care and provide information
for the benefit of their health and not
to their detriment.

I have been researching articles
from countries that have had wind
turbines for more than twenty years
and they have discovered that through
the years they have needed to keep
setting them further and further from
homes because of the many many
complaints about health issues caused
by their close proximity. Health issues
attributed to infra sound causing
sleep deprivation, head aches, vertigo,
irritability, loss of concentration and
the list goes on.

It seems in the long run it is
to your detriment and ours that these
issues have been ignored and turbines
have been allowed to sit too close
to citizens and their homes.

Why not learn from history?
Isn't that what higher education

)
and trusted positions of authority
are suppose to afford us?

History is clarified experience as
stated by James Russell Lowell.

The experience of Europe, Australia
and Canada should be teaching us
instead of us repeating the same
dangerous and wasteful mistakes.

) I beseech you on behalf of Huron
County citizens and especially Greenwich
Township citizens of whom I, my
husband, my children and grandchildren
and friends live, that you will duly
protect and provide the very best
for those lives that are in your care.

Sincerely

Marcia Ledit

To the OPSB and the
Director of the environmental Protection Agency,

I am glad that your agency is set in
place to protect our environment, we
certainly need rules regulations
to govern us or our whole country
would be a disaster area. I appreciate
your hard work and your commitment
to protect our environment.

As I look through data on the
internet I see that there are more
than 2000 anti-wind sites. It looks
to me that the problems lie heavy
upon the knowledge and expertise
of the environmental agency side.
The set backs aren't far enough
away from homes, the noise issues,
the infra sound issues, the
wild life issues, especially our
very own bald eagles, tiled fields
and water streams underground.
Are these issues evaluated thoroughly
and above board?

I agree we need to find ways to
support our high consumption of energy
through conservency and alternative
sources. But it seems we are

putting undue faith in one source, Wind, and it has not been understood just what the Truth is about this source and is it really worth the paths of destruction it leaves in its wake.

Wind and solar energy does not eliminate a coal fired base line generator station. In fact the process seems to cause more pollution by setting the coal generators on low while standing by in No wind, and we have plenty of that on a daily basis. It just doesn't seem logical.

Please evaluate all the information from past Countries. Ontario Canada seems a sad sad story of present wind problems. Europe has set back after set back of the turbines. Let's us be wise and prudent in your vote.

God Bless America!
Sincerely
Marcia Hall
