Dear Thomas Johnson,

I have recently attended information meetings concerning the wind turbines that could be coming to our area. Please help us stop this from happening! According to the maps we have seen, there will be 4 wind turbines within 1 mile of our home.

My husband suffers from epilepsy and we are very concerned about the negative impact this will have on his health.

The question has been asked, "Where were we four years ago?" The news paper reported this project would create jobs and provide money for our schools. Why would we fight that!? Now that more information has been brought to our attention, everyone needs to help stop the wind turbines and their long term health effects. Not just for my husband but for the whole community!

Sincerely,

April Shepherd
