PUCO Commissioners

Subject: No bailouts for coal

Dear PUCO Commissioners,

I do not support Ohio's electric utilities' attempt to bail out their old coal plants on my dime. These plants are not competitive with today's market prices for electricity, and they spew toxic pollution into our air and water.

Coal, which generates nearly 70 percent of electricity in Ohio, is known to cause major air pollution and negatively impact public health while contributing to climate disruption. Due to Ohio's heavy reliance on coal, we have some of the worst air in the nation.

Ohio's utilities' request to bail out coal plants that are no longer economically feasible is bad public policy that, in addition to costing Ohio electric customers more, will prevent Ohio from reducing dangerous emissions of carbon, soot, smog and mercury pollution.

Sincerely,
Season Jones

Subject: No bailouts for coal

Dear PUCO Commissioners,

I do not support Ohio's electric utilities' attempt to bail out their old coal plants on my dime. These plants are not competitive with today's market prices for electricity, and they spew toxic pollution into our air and water.

Coal, which generates nearly 70 percent of electricity in Ohio, is known to cause major air pollution and negatively impact public health while contributing to climate disruption. Due to Ohio's heavy reliance on coal, we have some of the worst air in the nation.

Ohio's utilities' request to bail out coal plants that are no longer economically feasible is bad public policy that, in addition to costing Ohio electric customers more, will prevent Ohio from reducing dangerous emissions of carbon, soot, smog and mercury pollution.

Sincerely,
Karen Collins

I have passed Kyger Creek plant a number of times en route from Athens to Gallipolis. This plant was at one time dedicated to supply electricity to the atomic facility in Piketon. What is its mission now? In any case, like other current coal-fired electricity generating plants, it should either be retro-fitted with the means to curtail its carbon, soot, smog and mercury pollution, or it should be closed.

Sincerely,
Lois Whealey

There are hundreds of thousands of individuals in Ohio who find themselves earning an unlivable salary because the companies they work for want to keep every cent of profit they can. And, the companies reply, they can go elsewhere when asked to provide a raise. This is the American Capitalist way-- supply and demand-- the invisible hand--etc. Why don't the electric companies ask their favorite invisible hand for a hand-out, not hard working consumers. If they had planned ahead, they wouldn't be in this sad financial situation and we would have cleaner air to breathe.

By the way, can the state government force me to breathe dirty air and pay for the privilege? Seems that's not only exposing me to a danger, but I think it's also against my religion.

Dear PUCO Commissioners,

I do not support Ohio's electric utilities' attempt to bail out their old coal plants on my dime. These plants are not competitive with today's market prices for electricity, and they spew toxic pollution into our air and water.

Coal, which generates nearly 70 percent of electricity in Ohio, is known to cause major air pollution and negatively impact public health while contributing to climate disruption. Due to Ohio's heavy reliance on coal, we have some of the worst air in the nation.

Ohio's utilities' request to bail out coal plants that are no longer economically feasible is bad public policy that, in addition to costing Ohio electric customers more, will prevent Ohio from reducing dangerous emissions of carbon, soot, smog and mercury pollution.

Sincerely,
Bruce Geldine

ActOnClimate! Safety First! Think Green and Alternative Energy!

Reliance on Coal, or any Fossil Fuel, and Fracking, is a threat to National Security, that creates serious Safety Hazards, and raises the Cost of Living. Pollution greatly raises the cost of Health Care, raises the Cost of Food and Beverages and causes Safety Hazards. Severe Storms become more frequent increasing the Cost of Living damaging both Public, and Private property across America.

Start with Quality Education. Willing to Learn and Change is the Positive Difference!

Dear PUCO Commissioners,

I do not support Ohio's electric utilities' attempt to bail out their old coal plants on my dime. These plants are not competitive with today's market prices for electricity, and they spew toxic pollution into our air and water.

Coal, which generates nearly 70 percent of electricity in Ohio, is known to cause major air pollution and negatively impact public health while contributing to climate disruption. Due to Ohio's heavy reliance on coal, we have some of the worst air in the nation.

Ohio's utilities' request to bail out coal plants that are no longer economically feasible is bad public policy that, in addition to costing Ohio electric customers more, will prevent Ohio from reducing dangerous emissions of carbon, soot, smog and mercury pollution.

Sincerely,
Sally Gergely

Subject: No bailouts for coal

Dear PUCO Commissioners,

So _that's_ why my electric bill keeps going up even though my husband and I have cut our electricity usage to the bone! I do not support Ohio's electric utilities' attempt to bail out their old coal plants on my dime; we live on a limited retirement income and simply cannot afford any more raises in rate. These plants are not competitive with today's market prices for electricity; further, they spew toxic pollution into our air and water. The Ohio River drains into the Mississippi River, which in turn flows to the Gulf of Mexico.

Coal, which generates nearly 70 percent of electricity in Ohio, is known to cause major air pollution and negatively impact public health while contributing to climate disruption, in spite of "scrubbers" and other mitigating procedures. Due to Ohio's heavy reliance on coal, we have some of the worst air in the nation.

Ohio's utilities' request to bail out coal plants that are no longer economically feasible is bad public policy that, in addition to costing Ohio electric customers more, will prevent Ohio from reducing dangerous emissions of carbon, soot, smog and mercury pollution -- not to mention the acid by-product of the "scrubbers."

Sincerely,
Joyce Eikenberry

PUCO Commissioners

Subject: No bailouts for coal

Dear PUCO Commissioners,

I do not support Ohio's electric utilities' attempt to bail out their old coal plants on my dime. These plants are not competitive with today's market prices for electricity, and they spew toxic pollution into our air and water.

Coal, which generates nearly 70 percent of electricity in Ohio, is known to cause major air pollution and negatively impact public health while contributing to climate disruption. Due to Ohio's heavy reliance on coal, we have some of the worst air in the nation.

Ohio's utilities' request to bail out coal plants that are no longer economically feasible is bad public policy that, in addition to costing Ohio electric customers more, will prevent Ohio from reducing dangerous emissions of carbon, soot, smog and mercury pollution.

Sincerely,
Barbara Padgett
