Notes:

Please docket the following in the case number above. Thank you.

COMMENT DESCRIPTION:

Dear Sirs, I would like to register my objection to the proposal that Duke Energy and First Energy, be allowed to pass on their costs of complying with recent clean air legislation. I care about toxic air and in particular air pollution, however Duke and First Energy are running a business, and any improvements should be paid for either from their profits or reducing the dividend paid to their stock holders. Duke/first Energy are continually playing the same scene and are trying to pass all the costs onto the customers, for updating their plants to comply with the new regulation. These costs are the price of doing business, which any company has to set aside monies to pay for. Duke/First Energy needs to be accountable to their customers, not their shareholders. Please deny their request for a public bailout, for making changes to their out dated coal plants.

Sincerely, and respectfully, I await your reply.

Dear Sir/Madam,

This letter is an effort to advise you with my growing concern about large utility companies attempting to have the consumer fund any repairs/improvements to their systems. I am specifically speaking about Duke Energy wanting consumers to fund the repair of outdated coal plants. What Duke needs to be investing in with the profits that they garner is a modern, more up to date method of delivering energy. Coal is a finite resource. Mining coal is destructive to our environment as well as to the individuals actually in the mines. The only individuals pleased with mining coal are the ones receiving a profit off the backs of the laborers and the land they are desecrating. As the saying 'When You Know Better You Do Better' goes Duke should DO BETTER.

Respectfully Submitted,
