14-BU-EL-880

Public Utilities Commission of Ohio  
180 East Broad Street  
Columbus, OH 43215

Dear Commissioners,

I am writing to urge you to deny the First Energy and Duke Energy request for a bailout of their outdated coal plants and to end the freeze on renewable energy standards. I trust those in your position are more informed than I am about the threat to our climate from carbon emissions. These actions are required for us to reduce air pollution, produce cleaner energy sources and save money on our electric bills. It is obvious that the bailout is NOT in the interest of customers and the larger issue of cleaner air, but only serves the financial interests of the companies.

Periodically I consider the best personal source for electric energy and it is hard to make relevant comparisons that save money and promote cleaner air. Regardless, we should not support Duke's continuing to pollute our air with outdated and destructive technology.

I appreciate the opportunity to comment.

Sincerely

  
James B. Slager

Attention Case Number 14-0841EL-SSO

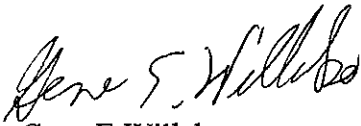

Please deny the rate increase to lock consumers into buying power from Ohio's oldest, dirtiest coal plants

I pay by bill to Duke Energy and I care about this issue because we need to protect our environment for future generations. We have already done major damage to the environment with man made global warming and in Ohio, polluting our water with waste from our many factory farms.

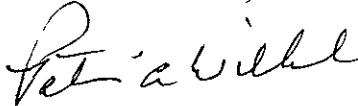

We care about reducing toxic pollution and saving money on our electric bills

A bailout of old, polluting technology only benefits utility shareholders and delays inevitable investment in efficiency and renewable energy.

It is time for Ohio to be forward thinking, not stuck in our old way of polluting the environment and causing major damage to our next generations.

Gene E Willeke

Case # 14-0841EL-550

Dear Public Utilities Commission of Ohio,

Please deny the rate increase to lock consumers into buying power from Ohio's oldest, dirtiest coal plants. As a home heated entirely by electricity, we cannot afford a rate increase and definitely not to support outdated plants. We also care about the environment and preserving what God has given us on this Earth. We would much rather see these plants replaced by more efficient and more environmentally friendly facilities.

Thank you very much for taking time to read our concerns,

Amber Cable

To those that represent me in the Public Utilities Commission of Ohio,

Thank you for the hard, and often thankless, work you do in representing the interests of the citizens of the great state of Ohio for public power consumption and distribution. I am reaching out to you today to address my concern for the recent request by Duke Energy, case # 14-0841EL-SSO, in conjunction with AEP and First Energy, to raise consumer rates to cover the costs in maintaining the following Ohio based power plants: Davis-Besse, WH Sammis, Cardinal, Conesville, WH Zimmer, JM Stuart, and Kyger Creek.

Having worked for The Babcock & Wilcox company, and with the advent of more and more consumer electronics, strides in developing electric cars, and more computer driven homes and businesses coming online, I do understand the difficulty in keeping up with the demand for electricity, especially in a state as populous as Ohio. Not to mention, with an aging infrastructure not designed meet this growing demand. However, the electronic age has been with us for quite some time now and at this point in time I feel the power companies listed above need to be leveraged into sun setting these outdated power plants. I am personally against allowing them to charge consumers to maintain their assumingly unprofitable, inefficient, and depreciated assets. Specifically without a clear, detailed plan of transition to cleaner, more efficient power sources.

Sincerely,

  
Jason Roberts

I am writing to urge action regarding Duke Energy & others using what I understand to be out-dated and energy inefficient Power plants instead of building more effective ones.

Whatever it takes to conserve energy & <sup>is</sup> cost effective should concern all consumers.

I hope your agency will act responsibly & quickly to ~~see~~ <sup>make</sup> this happen

Today energy is the question. Clearly we have been irresponsible not moving to more efficient power plants. The emissions problem has had grave consequences down wind dropping tons of aluminum, mercury, and acid rain on the forests to the east of Ohio with grave consequences in New England and the Atlantic Provinces. Duke energy is the most irresponsible electric utility in the area east of the Mississippi. Please deny any rate increases that would lock Ohio's consumers into buying energy/power from Ohio's oldest and dirtiest coal fired plants that should have been decommissioned years ago.

To PUCO -

11/19/14

My family and I care about reducing toxic pollution - that's why we have installed solar panels. It's time to stop the bail out of big electric, + gas companies.

I have asthma and know
