Accept all the LIN loop changes except for the LIN loops that are bad per Change Control 54. • Change the gray box for NM1MQ in the REF02 in the REF~TD under the NM1 loop to allow the sending of all codes if less than all 4 are changing per change control 55. • Added AMT Segment to the 814 change transaction: Monetary Amount (Budget Amount) per change control 57. • Removed value ESP from REF*PC per change control 59. • Add a new Reference ID of AMTBD in the REF*TD loop and an associated AMTBD loop similar to the current AMTB5 segment to reflect a customer's actual supplier account balance due amount on a monthly basis per change control 64. • On supplier requests only, modify REF02 and add REF03 line in REF*PG loop for FirstEnergy use only to insert coding for changing group aggregation code information per change control 66. • Append words to REFPG change reason code to indicate this can be used for changing the group identification code associated with FirstEnergy's Rate Stabilization Plan in addition to government aggregation per change control 67.

For AEP, DP&L, and FirstEnergy, to change a billing type, multiple REF~TD segments must be sent (REF~TD~REFBLT and REF~TD~REFPC) along with the associated REF~BLT and REF~PC segments (and REF~TD~REFRB and REF~RB segments in the NM1 loop if changing to rate ready):

Example of Rate Ready to Bill Ready:

For Duke Energy, OH, only one REF~TD segment will be accepted. A REF~TD~REFBLT segment should be sent along with the REF~BLT and REF~PC segments (and REF~RB segment in the NM1 loop if changing to rate ready):

Reference information as defined for a particular Transaction Set or as specified by the Reference Identification Qualifier

When REF01 is MT, the meter type is expressed as a five-character field. The first two characters are the type of consumption, the last three characters are the metering interval reported for billing purposes. "COMBO" is used for a meter that records more than one measurement. Valid values can be a combination of the following values:

Type of Consumption
  EA Each
  K1 Kilowatt Demand (kW)
  K2 Kilovolt Amperes Reactive Demand (kVAR)
  K3 Kilovolt Amperes Reactive Hour (kVARH)
  K4 Kilovolt Amperes (kVA)
  K5 Kilovolt Amperes Reactive (kVAR)
  KH Kilowatt Hour (kWh)

T9 Thousand Kilowatt Hours (MW)

Metering Interval Reported for Billing Purposes
nnn   Number of minutes from 001 to 999
ANN Annual
BIA   Bi-annual
BIM   Bi-monthly
DAY Daily
MON Monthly
QTR Quarterly
TOU Time of Use

For Example:
KHMON   Kilowatt Hours Per Month
K1015   Kilowatt Demand per 15 minute interval

Other Valid Codes
COMBO   This code is used to indicate that the meter has multiple measurements, e.g., one meter that measures both kWh and Demand.
