EXHIBIT C
(Description of the Nature of the Changes)

Windstream submits this information and analysis in support of its application. This application is filed pursuant to ORC § 4927.12(C)(3)(a), which provides as follows:

If the commission has not made a prior determination that the exchange area qualified for alternative regulation of basic local exchange service under Chapter 4901:1-4 of the Ohio Administrative Code as that chapter existed on the effective date of this section, an incumbent local exchange carrier may not alter its rates for basic local exchange service upward for that exchange area unless the carrier first applies to the commission and the commission determines that the application demonstrates that two or more alternative providers offer, in the exchange area, competing service to the basic local exchange service offered by an incumbent local exchange carrier in the exchange area, regardless of the technology and facilities used by the alternative provider, the alternative provider's location, and the extent of the alternative provider's service area within the exchange area. An alternative provider includes a telephone company, including a wireless service provider, a telecommunications carrier, and a provider of internet protocol-enabled services, including voice over internet protocol.

Windstream has not previously filed for alternative regulation of basic local exchange service under 4901:1-4 of the Ohio Administrative Code for any of the Exchanges. Thus, the Commission has not made a prior determination that any of the Exchanges qualify for alternative regulation. Further, the application demonstrates that two or more alternative providers offer service in each of the Exchanges in competition with the basic exchange service offered by Windstream. Because the application meets the statutory requirements of Ohio Rev. Code § 4927.12(C)(3)(a), as demonstrated in Exhibit E, Windstream requests that the Commission approve this application.

Furthermore, Windstream recognizes the pricing restrictions on basic local exchange services ("BLES") as set forth in Ohio Rev. Code 4927.12(C)(3)(c), which provides the following:

In no event may an incumbent local exchange carrier that applies to the commission under division (C)(3)(a) of this section, during the twelve-month period that begins on the thirty-first day after the company files the application, and during any subsequent twelve-month period, alter the carrier's rates for basic local exchange service upward for the exchange area to which the application applies by more than the amount described in division (C)(1)(b) of this section.

Exhibit E1 titled Exchange Areas/County identifies the Exchanges and the county or counties in which each exchange is located. Exhibit E2 titled Supporting Competitive Information contains Windstream's demonstration that it meets the statutory criterion that two or more alternative providers offer competing service to the BLES service offered by Windstream in each of the Exchanges. Windstream researched publically available information of alternative providers offering competing service in each exchange via the competitor's websites. The alternative providers have mechanisms on their websites that permit one to determine the availability of the provider's services in specific areas based on a phone number and/or address. These mechanisms enabled Windstream to readily verify the existence of alternative providers with service offerings in a specific service area. Additionally, wireless carriers have Coverage Locator sites which display the service strength in a given area. Windstream used these mechanisms to identify the alternative providers within each exchange.

Exhibit D contains an affidavit attesting that the information set forth in the Exhibit E is true and correct to the best of Windstream's knowledge.

Pursuant to Ohio Adm. Code Section 4901:1-6-14(F)(5), a customer notice consistent with the requirements of Ohio Adm. Code Section 4901:1-6-07 has been provided to all affected customers in accordance with the affidavit set forth in Exhibit D.

Windstream has demonstrated that it meets the statutory requirements for BLES price flexibility in each of the Exchanges. The Commission should grant this application and approve the tariff changes.

EXHIBIT D
(Copy of the Notice Provided and Affidavit)

The following notice will be provided by bill message beginning with the June 1, 2015 billing cycle and completing on the June 28, 2015 billing cycle. Our coverage maps provide high-level estimates of our coverage areas when using your device outdoors under optimal conditions. Coverage isn't available everywhere. Estimating wireless coverage and signal strength is not an exact science.

There are gaps in coverage within our estimated coverage areas that, along with other factors both within and beyond our control (network problems, software, signal strength, your wireless device, structures, buildings, weather, geography, topography, etc.), will result in dropped and blocked connections, slower data speeds, or otherwise impact the quality of services.

Services that rely on location information, such as E911 and GPS navigation, depend on your device's ability to acquire satellite signals (typically not available indoors) and network coverage. E911 services also depend on local emergency service provider systems/support. Estimated future coverage subject to change.

Our coverage maps provide high-level estimates of our coverage areas when using your device outdoors under optimal conditions. Coverage isn't available everywhere. Estimating wireless coverage and signal strength is not an exact science.

There are gaps in coverage within our estimated coverage areas that, along with other factors both within and beyond our control (network problems, software, signal strength, your wireless device, structures, buildings, weather, geography, topography, etc.), will result in dropped and blocked connections, slower data speeds, or otherwise impact the quality of services.

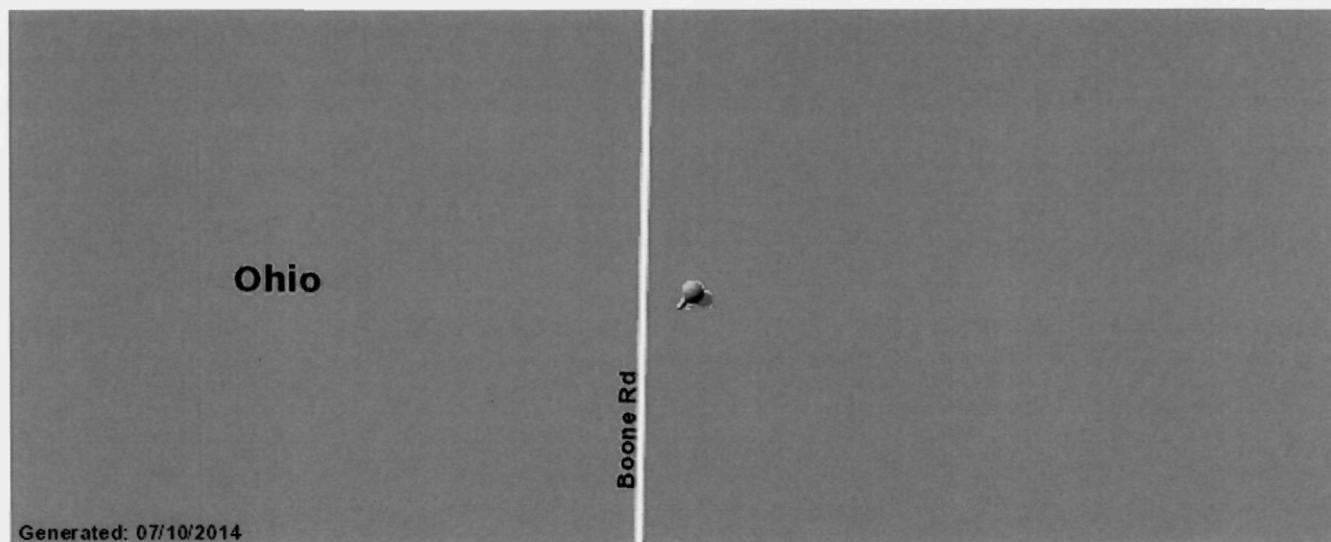

Services that rely on location information, such as E911 and GPS navigation, depend on your device's ability to acquire satellite signals (typically not available indoors) and network coverage. E911 services also depend on local emergency service provider systems/support. Estimated future coverage subject to change.

These Coverage Locator maps depict predicted and approximate wireless coverage. The coverage areas shown do not guarantee service availability, and may include locations with limited or no coverage. Even within a coverage area, there are many factors, including customer's equipment, terrain, proximity to buildings, foliage, and weather that may impact service. Some of the Coverage Areas include networks run by other carriers, the coverage depicted is based on their information and public sources, and we cannot ensure its accuracy.

Our coverage maps provide high-level estimates of our coverage areas when using your device outdoors under optimal conditions. Coverage isn't available everywhere. Estimating wireless coverage and signal strength is not an exact science.

There are gaps in coverage within our estimated coverage areas that, along with other factors both within and beyond our control (network problems, software, signal strength, your wireless device, structures, buildings, weather, geography, topography, etc.), will result in dropped and blocked connections, slower data speeds, or otherwise impact the quality of services.

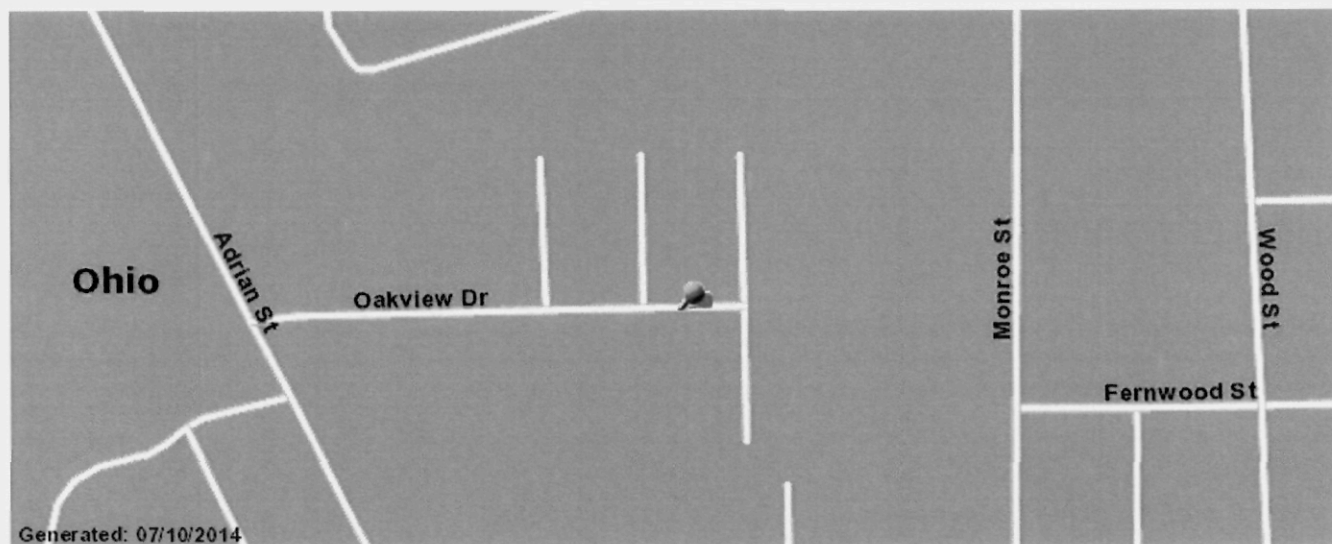

Services that rely on location information, such as E911 and GPS navigation, depend on your device's ability to acquire satellite signals (typically not available indoors) and network coverage. E911 services also depend on local emergency service provider systems/support. Estimated future coverage subject to change.

Our coverage maps provide high-level estimates of our coverage areas when using your device outdoors under optimal conditions. Coverage isn't available everywhere. Estimating wireless coverage and signal strength is not an exact science.

There are gaps in coverage within our estimated coverage areas that, along with other factors both within and beyond our control (network problems, software, signal strength, your wireless device, structures, buildings, weather, geography, topography, etc.), will result in dropped and blocked connections, slower data speeds, or otherwise impact the quality of services.

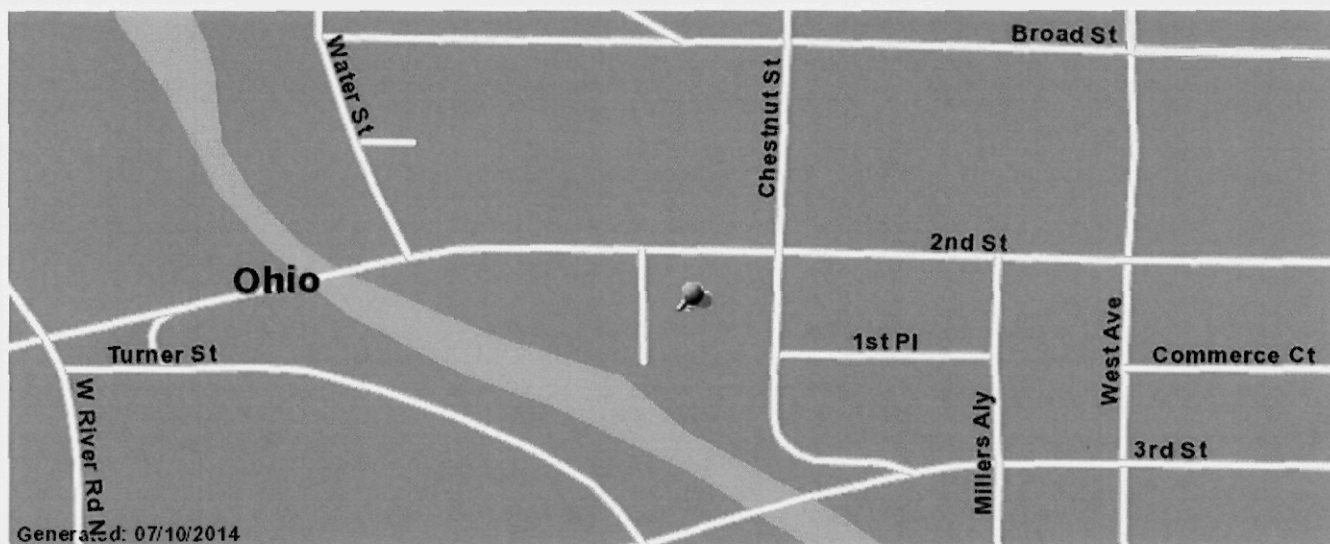

Services that rely on location information, such as E911 and GPS navigation, depend on your device's ability to acquire satellite signals (typically not available indoors) and network coverage. E911 services also depend on local emergency service provider systems/support. Estimated future coverage subject to change.
