

Technical Information

Proline Prosonic Flow B 200

Ultrasonic flow measuring system
The device for accurate, reliable biogas measurement under variable process conditions

Application

- Reliable measurement of wet biogas, digester gas and landfill gas under low process pressure, low flow rates and varying gas compositions.
- The Ultrasonic measuring principle is unaffected by the gas composition.

Device properties:

- Medium temperature: 0 to 80 °C (32 to 176 °F)
- Process pressure: max. 10 bar (145 psi)
- Nominal diameter: DN 50 to 200 (2 to 8")
- Accuracy:
 - Volume flow: ±1.5 % o.r.
 - Methane: ±2 % abs. (optional)
- Loop powered transmitter made of aluminum or stainless steel
- Graphical local display with operation from the outside (Touch Control)
- Communication via 4-20 mA HART
- Ex approvals accepted worldwide: ATEX, IECEx, _CCSA_{US}, NEPSI (intrinsically safe or explosion proof design)

Your benefits

Biogas measurement for a wide range of applications with optional real-time measurement of the biogas methane fraction combined with genuine loop-powered technology.

Sizing – correct product selection

Applicator - the reliable, easy-to-use tool for selecting and sizing measuring devices for every application

Installation – simple and efficient

- Short inlet and outlet runs
- Reduced wiring thanks to loop-powered technology

Commissioning – reliable and intuitive Guided parameterization ("Make-it-run" Wizards)

Operation – increased measurement availability

- Multivariable measurement: volume flow and, optionally, methane fraction and temperature
- No pressure loss
- Diagnostic capability
- Automatic data restore by HistoROM

Cost-effective Life Cycle Management by W@M

Symbols used

Electrical symbols

Symbol	Meaning
A0011197	Direct current A terminal to which DC voltage is applied or through which direct current flows.
~ A0011198	Alternating current A terminal to which alternating voltage is applied or through which alternating current flows.
A0017381	 □ Interest current and alternating current ■ A terminal to which alternating voltage or DC voltage is applied. ■ A terminal through which alternating current or direct current flows.
——————————————————————————————————————	Ground connection A grounded terminal which, as far as the operator is concerned, is grounded via a grounding system.
A0011199	Protective ground connection A terminal which must be connected to ground prior to establishing any other connections.
A0011201	Equipotential connection A connection that has to be connected to the plant grounding system: This may be a potential equalization line or a star grounding system depending on national or company codes of practice.

Symbols for certain types of information

Symbol	Meaning
A0011182	Allowed Indicates procedures, processes or actions that are allowed.
A0011183	Preferred Indicates procedures, processes or actions that are preferred.
A0011184	Forbidden Indicates procedures, processes or actions that are forbidden.
A0011193	Tip Indicates additional information.
A0011194	Reference to documentation Refers to the corresponding device documentation.
A0011195	Reference to page Refers to the corresponding page number.
A0011196	Reference to graphic Refers to the corresponding graphic number and page number.

Symbols in graphics

Symbol	Meaning
1, 2, 3,	Item numbers
1. , 2. , 3	Series of steps
A, B, C,	Views
A-A, B-B, C-C,	Sections
≋ →	Flow direction
A0013441	

Symbol	Meaning	
A0011187	azardous area dicates a hazardous area.	
A0011188	Safe area (non-hazardous area) Indicates a non-hazardous area.	

Function and system design

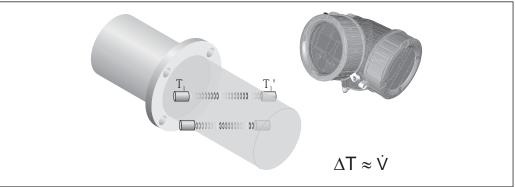

Measuring principle

A Prosonic Flow inline flowmeter measures the flow rate of the passing fluid by using sensor pairs located on opposite sides of the meter body and at an angle so that one of the sensors in the pair is slightly downstream. The design is non-invasive and does not have any moving parts.

The flow signal is established by alternating an acoustic signal between the sensor pairs and measuring the time of flight of each transmission. Then utilizing the fact that sound travels faster with the flow versus against the flow, this differential time (Δ T) can be used to determine the fluids velocity between the sensors.

The volume flow rate is established by combining all the flow velocities determined by the sensor pairs with the cross sectional area of the meter body and extensive knowledge about fluid flow dynamics. The design of the sensors and their position ensures that only a short straight run of pipe upstream of the meter is required after typical flow obstructions such as bends in one or two planes.

Advance digital signal processing facilitates constant validation of the flow measurement reducing susceptibility to multiphase flow conditions and increases the reliability of the measurement.

A001545

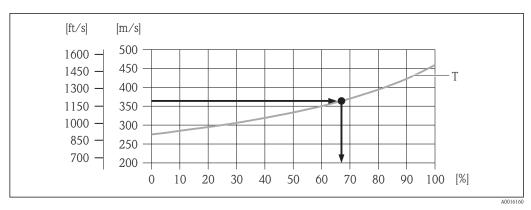

Direct measurement of the methane fraction (CH₄)

The sound velocity, temperature and chemical composition of a gas are directly related to one another. If two of these characteristic quantities are known, the third can be calculated. The higher the gas temperature or the methane fraction, the higher the sound velocity in biogas, for example.

Since the measuring device accurately measures both the sound velocity and the current gas temperature, the methane fraction can be calculated directly and displayed on site without the need for an additional measuring instrument .

The relative humidity of biogas is usually 100 %. Thus, the water content can be determined by the temperature measurement and can be compensated for.

The measuring device is unique in its ability to measure the methane fraction directly, making it possible to monitor the gas flow and gas quality 24/7. In this way, operators of a biogas plant, for example, can react swiftly and specifically to problems in the digestion process.

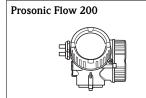

Calculation of the methane fraction [%] based on the sound velocity [m/s (ft/s)] and a temperature T of 40 °C (104 °F), for example

Measuring system

The device consists of a transmitter and a sensor.

One device version is available: compact version, transmitter and sensor form a mechanical unit.

Transmitter

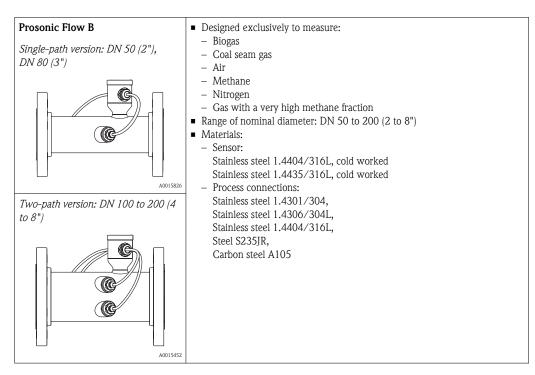

Materials:

- Stainless steel 1.4404/316L
- Aluminum coated AlSi10Mg

Configuration:

- External operation via four-line, illuminated local display with touch control and guided menus ("Make-it-run" wizards) for applications
- Via operating tools (e.g. FieldCare)

Sensor

Input

Measured variable

Direct measured variables

Volume flow

Calculated measured variables

- Corrected volume flow
- Mass flow

Optional measured variables (can be ordered)

Order code for "Sensor version", option 2 "Volume flow + Biogas analysis"

- Corrected methane volume flow
- Energy flow
- Methane fraction
- Gross calorific value
- Wobbe index
- Temperature

Measuring range

Standard (Order code for "Calibration Flow", option 1 "Operable flow range 30:1")

Nominal diameter		Velocity		Effective volume flow	
[mm]	[in]	[m/s]	[ft/s]	[m ³ /h]	[ft³/h]
50	2	1 to 30	3.28 to 98.4	9 to 269	316 to 9495
80	3	1 to 30	3.28 to 98.4	20 to 611	720 to 21 592
100	4	1 to 30	3.28 to 98.4	34 to 1 032	1 215 to 36 443
150	6	1 to 30	3.28 to 98.4	76 to 2290	2 695 to 80 862
200	8	1 to 30	3.28 to 98.4	131 to 3925	4620 to 138596

Optional (Order code for "Calibration Flow", option 2 "Operable flow range 100:1")

Nominal diameter		V	elocity	Effective volume flow	
[mm]	[in]	[m/s]	[ft/s]	[m ³ /h]	[ft³/h]
50	2	0.3 to 30	0.98 to 98.4	3 to 269	95 to 9495
80	3	0.3 to 30	0.98 to 98.4	6 to 611	215 to 21 592
100	4	0.3 to 30	0.98 to 98.4	11 to 1 032	363 to 36 443
150	6	0.3 to 30	0.98 to 98.4	25 to 2290	805 to 80 862
200	8	0.3 to 30	0.98 to 98.4	43 to 3 925	1 365 to 138 596

The values in the table should only be regarded as reference values.

To calculate the measuring range, use the *Applicator* sizing tool ($\rightarrow = 41$)

Recommended measuring range

"Flow limit" section ($\rightarrow \stackrel{\triangle}{=} 25$)

Operable flow range

- 30:1 (standard; order code for "Calibration Flow", option 1 "Operable flow range 30:1")
- 100:1 (optional; order code for "Calibration Flow", option 2 "Operable flow range 100:1")

Flow rates above the preset full scale value do not overload the amplifier so the totalized values are registered correctly.

Input signal

HART protocol

To increase the accuracy of certain measured variables, a measured pressure value can be used instead of a fixed process pressure. For this purpose, the measuring device continuously reads in the process pressure from a pressure transmitter (e.g. Cerabar M or Cerabar S) via the HART protocol.

The pressure transmitter must support the following protocol-specific functions:

- HART protocol
- Burst mode
- Endress+Hauser recommends the use of an absolute pressure transmitter

- Please comply with the special mounting instructions when using pressure transmitters (\rightarrow 🖹 21)

External pressure compensation is recommended to calculate the following measured variables:

- Corrected volume flow
- Corrected methane volume flow
- Mass flow
- Energy flow

Output

Output signal

Current output

Current output 1	4-20 mA HART (passive)
Current output 2	4-20 mA (passive)
Resolution	< 1 μΑ
Damping	Adjustable: 0.07 to 999 s
Assignable measured variables	 Volume flow Corrected volume flow Corrected methane volume flow Mass flow Energy flow Methane fraction Gross calorific value Wobbe index Temperature

Pulse/frequency/switch output

E	
Function	Can be set to pulse, frequency or switch output
Version	Passive, open collector
Maximum input values	■ DC 35 V ■ 50 mA

Voltage drop	For ≤ 2 mA: 2 VFor 10 mA: 8 V
Residual current	≤ 0.05 mA
Pulse output	
Pulse width	Adjustable: 5 to 2000 ms
Maximum pulse rate	100 Impulse/s
Pulse value	Adjustable

Assignable measured variables Frequency output	 Volume flow Corrected volume flow Corrected methane volume flow Mass flow Energy flow 		
Output frequency	Adjustable: 0 to 1 000 Hz		
Damping	Adjustable: 0 to 999 s		
Pulse/pause ratio	1:1		
Assignable measured variables	 Volume flow Corrected volume flow Corrected methane volume flow Mass flow Energy flow Methane fraction Gross calorific value Wobbe index Temperature 		
Switch output			
Switching behavior	Binary, conductive or non-conductive		
Switching delay Adjustable: 0 to 100 s			
Number of switching cycles	Unlimited		
Assignable functions	■ Off ■ On ■ Diagnostic behavior ■ Limit value — Volume flow — Corrected volume flow — Corrected methane volume flow — Mass flow — Energy flow — Methane fraction — Gross calorific value — Wobbe index — Temperature — Totalizer 1 to 3 ■ Flow direction monitoring ■ Status Low flow cut off		

Signal on alarm

Depending on the interface, failure information is displayed as follows:

Current output

4-20 mA

	Selectable (as per NAMUR recommendation NE 43): Minimum value: 3.6 mA Maximum value: 22 mA Defined value: 3.59 to 22.5 mA Actual value Last valid value
--	--

HART

Device diagnostics	Device condition can be read out via HART Command 48
--------------------	--

Pulse/frequency/switch output

Pulse output		
Failure mode	Choose from: Actual value No pulses	
Frequency output		
Failure mode	Choose from: Actual value Defined value: 0 to 1 250 Hz Hz	
Switch output		
Failure mode	Choose from: Current status Open Closed	

Local display

Plain text display	With information on cause and remedial measures
Backlight	Additionally for device version with SD03 local display: red lighting indicates a device error.

Status signal as per NAMUR recommendation NE 107

Operating tool

- Via digital communication: HART protocol
- Via service interface

Plain text display	With information on cause and remedial measures
--------------------	---

Additional information on remote operation ($\rightarrow \stackrel{\triangle}{=} 36$)

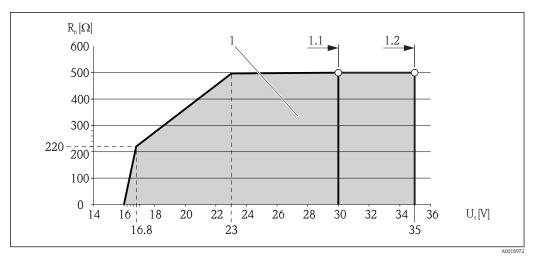

Load

Load for current output: 0 to 500 Ω , depending on the external supply voltage of the power supply unit

Calculation of the maximum load

Depending on the supply voltage of the power supply unit (U_S) , the maximum load (R_B) including line resistance must be observed to ensure adequate terminal voltage at the device. In doing so, observe the minimum terminal voltage ($\rightarrow = 14$)

- For $U_S = 16.0$ to 16.8 V: $R_B \le (U_S 16.0$ V) : 0.0036 A
- For $U_S = 16.8$ to 23.0 V: $R_B \le (U_S 12.0 \text{ V}) : 0.022 \text{ A}$
- \blacksquare For $U_S=23.0$ to 30.0 V: $R_B \leq 500~\Omega$

- 1 Operating range
- 1.1 For order code for "Output", option A "4-20 mA HART"/option B "4-20 mA HART, pulse/frequency/switch output" with Ex i and option C "4-20 mA HART, 4-20 mA"
- 1.2 For order code for "Output", option A "4–20 mA HART"/option B "4–20 mA HART, pulse/frequency/switch output" with non-Ex and Ex d

Sample calculation

Supply voltage of the power supply unit: $U_S = 17.5~V$ Maximum load: $R_B \le (17.5~V - 12.0~V): 0.022~A = 250~\Omega$

	1 (+)	2 (-)	3 (+)	4 (-)
Option A	4-20 mA HA	ART (passive)	-	
Option B 1)	4-20 mA HART (passive)		1	y/switch output sive)

Option C ¹⁾	4-20 mA HART (passive)	4-20 mA (passive)
-------------------------------	------------------------	-------------------

1) Output 1 must always be used; output 2 is optional.

Supply voltage

An external power supply is required for each output. The following supply voltage values apply for the 4-20 mA and 4-20 mA HART current output:

Order code for "Output"	Minimum terminal voltage	Maximum terminal voltage
 Option A ^{1), 2)}: 4-20 mA HART Option B ^{1), 2)}: 4-20 mA HART, Pulse/frequency/switch output 	For 4 mA: ≥ DC 16 V For 20 mA: ≥ DC 12 V	DC 35 V
Option C $^{1), 2)}$: 4–20 mA HART, 4–20 mA	For 4 mA: ≥ DC 16 V For 20 mA: ≥ DC 12 V	DC 30 V

- 1) External supply voltage of the power supply unit with load $(\rightarrow \stackrel{\triangle}{=} 9)$
- 2) For device versions with local display SD03: The terminal voltage must be increased by DC $2\,V$ if backlighting is used.
- For information on the Ex connection values (\rightarrow $\stackrel{\triangle}{=}$ 10)
- Various power supply units can be ordered from Endress+Hauser: see "Accessories" section $(\rightarrow \ \ \ \ \ \ \ \ \ \ \ \ \)$

Power consumption

Transmitter

Order code for "Output"	Maximum power consumption
Option A : 4-20 mA HART	770 mW
Option B : 4-20 mA HART, Pulse/frequency/switch output	 Operation with output 1: 770 mW Operation with output 1 and 2: 2770 mW
Option C : 4-20 mA HART, 4-20 mA	 Operation with output 1: 660 mW Operation with output 1 and 2: 1 320 mW

For information on the Ex connection values ($\rightarrow \stackrel{\triangle}{=} 10$)

Current consumption

Current output

For every 4-20 mA or 4-20 mA HART current output: 3.6 to 22.5 mA

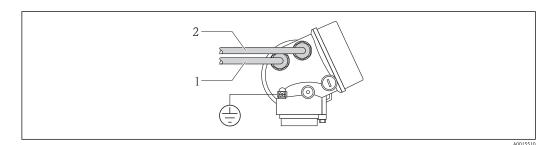

If the option **Defined value** is selected in the **Failure mode** parameter ($\rightarrow \stackrel{\triangle}{=} 8$): 3.59 to 22.5 mA

Power supply failure

- Totalizers stop at the last value measured.
- Configuration is retained in the device memory (HistoROM).
- Error messages (incl. total operated hours) are stored.

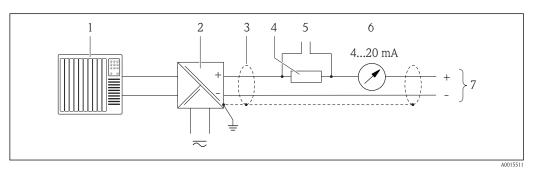

Electrical connection

Connecting the transmitter

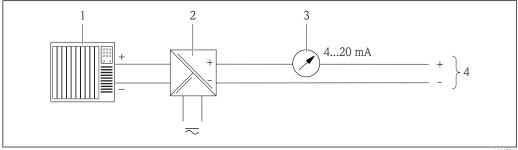

- Cable entry for output 1
- Cable entry for output 2

Connection examples

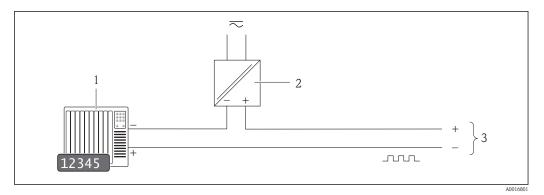

2 Connection example for 4-20 mA HART current output (passive)

- 1 Automation system with current input (e.g. PLC)
- 2 Active barrier for power supply (e.g. RN221N) (\rightarrow $\stackrel{\triangle}{=}$ 17)
- 3 Observe cable specification (\rightarrow 🖹 17)
- Resistor for HART communication (\geq 250 Ω): observe maximum load (\rightarrow $\stackrel{\triangle}{=}$ 9)
- Connection for HART operating devices ($\rightarrow \stackrel{\triangle}{=} 36$)
- Analog display unit: observe maximum load ($\rightarrow \stackrel{\triangleright}{=} 9$)
- Transmitter

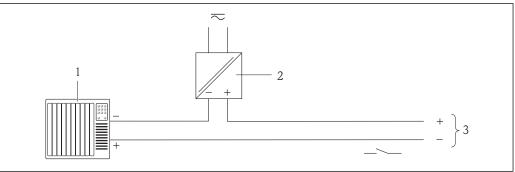

3 3 3 Connection example for 4-20 mA current output (passive)

- Automation system with current input (e.g. PLC)
- 2 Active barrier for power supply (e.g. RN221N) (\rightarrow 🖹 14)
- Analog display unit: observe maximum load ($\rightarrow \square 9$)
- Transmitter

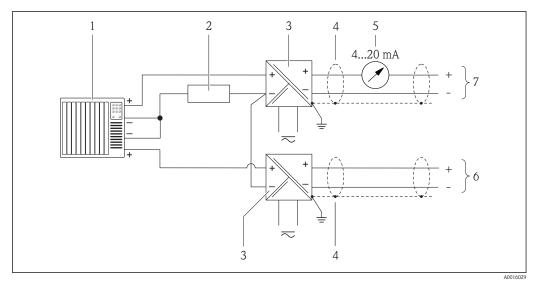

- Connection example for pulse/frequency output (passive)
- 1 Automation system with pulse/frequency input (e.g. PLC)
- 2 Power supply
- *3* Transmitter: Observe input values $(\rightarrow \stackrel{\triangleright}{=} 7)$

A001680

☑ 6 Connection example for HART input with a common negative

- 1 Automation system with HART output (e.g. PLC)
- *2* Resistor for HART communication ($\geq 250 \Omega$): observe maximum load ($\rightarrow \stackrel{\triangle}{=} 9$)
- 3 Active barrier for power supply (e.g. RN221N) (\rightarrow $\stackrel{ }{=}$ 14)
- 4 Observe cable specification ($\rightarrow \stackrel{\square}{=} 17$)
- 5 Analog display unit: observe maximum load ($\rightarrow \stackrel{\triangle}{=} 9$)
- 6 Pressure transmitter (e.g. Cerabar M, Cerabar S): see requirements ($\rightarrow \stackrel{\triangle}{=} 7$)

7 Transmitter

16

Potential equalization

No special measures for potential equalization are required.

For devices in hazardous locations, please observe the guidelines in the Ex documentation (XA).

Terminals

- For device version without integrated overvoltage protection: plug-in spring terminals for wire cross-sections 0.5 to 2.5 mm² (20 to 14 AWG)
- For device version with integrated overvoltage protection: screw terminals for wire cross-sections 0.2 to 2.5 mm² (24 to 14 AWG)

Cable entries

- Cable gland (not for Ex d): M20 \times 1.5 with cable \varnothing 6 to 12 mm (0.24 to 0.47 in)
- Thread for cable entry:
 - For non-Ex and Ex: NPT 1/2"
 - For non-Ex and Ex (not for CSA Ex d/XP): G 1/2"
 - For Ex d: $M20 \times 1.5$

Cable specification

Permitted temperature range

- -40 °C (-40 °F)...≥ 80 °C (176 °F)
- Minimum requirement: cable temperature range ≥ ambient temperature + 20 K

Signal cable

Current output

- For 4-20 mA: standard installation cable is sufficient.
- For 4-20 mA HART: Shielded cable recommended. Observe grounding concept of the plant.

Pulse/frequency/switch output

Standard installation cable is sufficient.

Overvoltage protection

The device can be ordered with integrated overvoltage protection for diverse approvals: Order code for "Accessory mounted", option ${\bf NA}$ "overvoltage protection"

Input voltage range	Values correspond to supply voltage specifications ($\rightarrow \stackrel{\cong}{=} 14)^{ 1)}$
Resistance per channel	$2 \cdot 0.5 \Omega$ max
DC sparkover voltage	400 to 700 V
Trip surge voltage	< 800 V
Capacitance at 1 MHz	< 1.5 pF
Nominal discharge current (8/20 µs)	10 kA
Temperature range	-40 to +85 °C (-40 to +185 °F)

1) The voltage is reduced by the amount of the internal resistance $I_{min} \cdot R_i$

Depending on the temperature class, restrictions apply to the ambient temperature for device versions with overvoltage protection .

Performance characteristics

Reference conditions

- Error limits following ISO/DIS 11631
- Calibration gas: air
- Temperature regulated to 24 ± 0.5 °C (75.2 ± 0.9 °F) under atmospheric pressure
- Humidity regulated to < 40 % RH
- Accuracy based on accredited calibration rigs that are traced to ISO 17025.
- \mathbf{i}

To calculate the measuring range, use the *Applicator* sizing tool ($\rightarrow \stackrel{\triangle}{=} 41$)

Maximum measured error

In addition to the values indicated, the measured error at the current output is typically $\pm 4~\mu A.$ o.r. = of reading; o.f.s. = of full scale value; abs. = absolute; 1 g/cm³ = 1 kg/l; T = medium temperature

Volume flow

Standard	■ ±1.5 % o.r. for 3 to 30 m/s (9.84 to 98.4 ft/s)
Order code for "Calibration", option 1	■ ±3 % o.r. for 1 to 3 m/s (3.28 to 9.84 ft/s)
Optional Order code for "Calibration", option 2	■ ±0.1 % o.f.s. for 0.3 to 1 m/s (0.98 to 3.28 ft/s) ■ ±1.5 % o.r. for 1 to 30 m/s (3.28 to 98.4 ft/s)

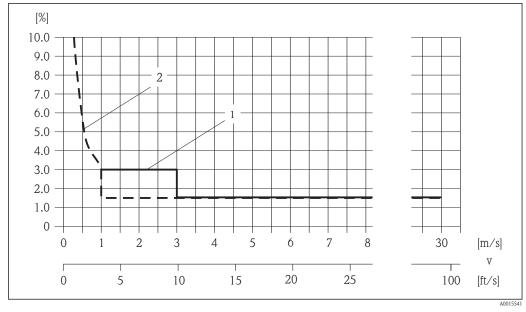

Methane

 $\pm 2 \%$ o.f.s. = $\pm 2 \%$ abs.

Temperature

 $\pm 0.6 \, ^{\circ}\text{C} \pm 0.005 \cdot \text{T} \, ^{\circ}\text{C} \, (\pm 0.9 \, ^{\circ}\text{F} \pm 0.005 \cdot (\text{T} - 32) \, ^{\circ}\text{F})$

Example for max. measured error (volume flow)

Zample for max. measured error (volume flow) in % o.r.

- 1 Standard (order code for "Calibration", option 1)
- 2 Optional (order code for "Calibration", option 2)

Repeatability

o.r. = of reading; o.f.s. = of full scale value; abs. = absolute; 1 g/cm 3 = 1 kg/l; T = medium temperature

Volume flow

±0.5 % o.r.

Methane

 ± 0.5 % o.f.s. = ± 0.5 % abs.

Temperature

 $\pm 0.3\,^{\circ}\text{C} \pm 0.0025 \cdot \text{T}\,^{\circ}\text{C} \ (\pm 0.45\,^{\circ}\text{F} \pm 0.0025 \cdot (T - 32)\,^{\circ}\text{F})$

Response time

- The response time depends on the configuration (damping).
- Response time in the event of erratic changes in the flow: after 1000 ms 95 % of the full scale value.

Influence of ambient temperature

o.r. = of reading; o.f.s. = of full scale value

Current output

Additional error, in relation to the span of 16 mA:

18

Temperature coefficient at zero point (4 mA)	0.02 %/10 K, max. 0.35 % over the entire temperature range -40 to +60 °C (-40 to +140 °F)
Temperature coefficient with span (20 mA)	0.05 %/10 K, max. 0.5 % over the entire temperature range -40 to +60 °C (–40 to +140 °F)

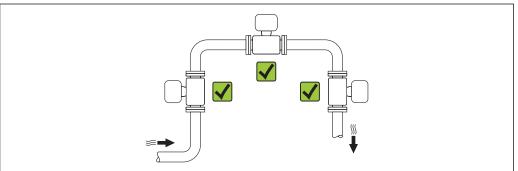

Pulse/frequency output

Temperature coefficient Max. ±100 ppm o.r.	
---	--

Installation

No special measures such as supports are necessary. External forces are absorbed by the construction of the device.

Mounting location

A0015543

Orientation

The direction of the arrow on the sensor helps you to install the sensor according to the flow direction (direction of medium flow through the piping).

- \blacksquare Install the measuring device in a parallel plane free of external mechanical stress.
- lacktriangledown The internal diameter of the pipe must match the internal diameter of the sensor (ightarrow $\begin{tabular}{l} \ge 26 \end{tabular}$).

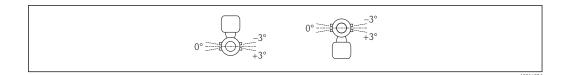

A0015895

Orientation			Compact version
A	Vertical orientation	A0015545	
В	Horizontal orientation, transmitter head up *	A0015589	

	Orientatio	n	Compact version
С	Horizontal orientation, transmitter head down *	A0015590	☑
D	Horizontal orientation, transmitter head at side	A0015592	×

 * A maximum deviation of only ± 3 $^{\circ}$ is permitted for the horizontal alignment of the transducers.

Inlet and outlet runs

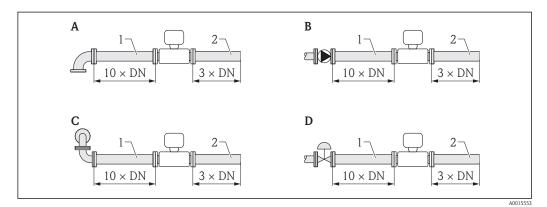

The sensor should be mounted upstream of assemblies such as valves, T-sections, elbows etc. where possible. As a minimum, the inlet and outlet runs shown below must be observed to achieve the specific accuracy of the device. The longest inlet run shown must be observed if two or more flow disturbances are present.

Single-path version: DN 50 (2"), DN 80 (3")

- § Single-path version: minimum inlet and outlet runs with various flow obstructions
- A 90 ° elbow or T-section
- B Pump
- C 2× 90 ° elbow 3-dimensional
- D Control valve
- 1 Inlet run
- 2 Outlet run

Two-path version: DN 100 to 200 (4 to 8")

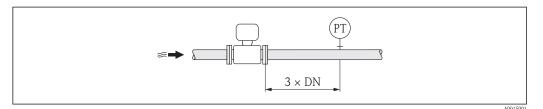

4 Two-path version: minimum inlet and outlet runs with various flow obstructions

- A 90 ° elbow or T-section
- B Pump
- C 2× 90 ° elbow 3-dimensional
- D Control valve
- 1 Inlet run
- 2 Outlet run

Special mounting instructions

Outlet run for pressure transmitter

If a pressure transmitter is installed downstream of the measuring device, make sure there is sufficient distance between the two devices.

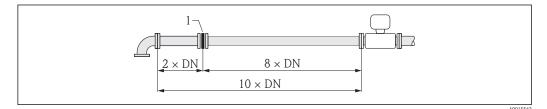

PT Pressure transmitter

Flow conditioner

It is advisable to use a flow conditioner if the inlet runs cannot be observed. Using a flow conditioner reduces the inlet required as follows:

Single-path version	Two-path version				
10 × DN	5 × DN				

The flow conditioner should be installed so that it divides the available inlet run by a ratio of roughly 20:80. Example for an inlet run of $10 \times DN$:

1 Flow conditioner

Pressure loss

The pressure loss for flow conditioners is calculated as follows: $\Delta p \; [mbar] = 0.0085 \cdot \rho \; [kg/m^3] \cdot v^2 \; [m/s]$

Example for biogas $p=1\,040 \text{ mbar abs.}$ $\rho=1.0432 \text{ kg/m}^3 \text{ at } t=54 \text{ °C } (129 \text{ °F})$ v=7 m/s $\Delta p=0.0085 \cdot 1.0432 \text{ kg/m}^3 \cdot 49 \text{ m/s} = 0.434 \text{ mbar}$ --- abs.: absolute $\rho\text{: density of the process medium}$ v: average flow velocity

Environment

Ambient temperature range

Transmitter	-40 to +60 °C (-40 to +140 °F)					
Local display	-20 to $+60$ °C (-4 to $+140$ °F), the readability of the display may be impaired at temperatures outside the temperature range.					
Sensor	■ Flange material carbon steel: -10 to +60 °C (+14 to +140 °F) ■ Flange material stainless steel: -40 to +60 °C (-40 to +140 °F) ■ Version without flange: -40 to +60 °C (-40 to +140 °F)					

If operating outdoors:

Avoid direct sunlight, particularly in warm climatic regions.

Weather protection covers can be ordered from Endress+Hauser: see "Accessories" section ($\rightarrow \Box$ 39)

Temperature tables

The following interdependencies between the permitted ambient and fluid temperatures apply when operating the device in hazardous areas:

The following applies for installations with overvoltage protection in conjunction with approval code BJ or IJ: $T_a = T_a - 2$ °C ($T_a = T_a - 3.6$ °F)

Flange connection according to EN 1092-1 (DIN 2501)

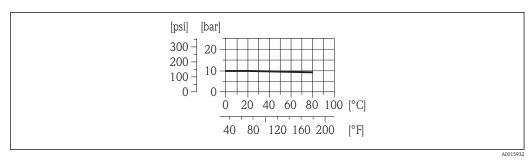

☑ 10 With lap joint flange, stamped plate PN 10, material 1.4301/304 (DN 50 to 200 / 2 to 8")

Flange connection according to EN 1092-1 (DIN 2501)

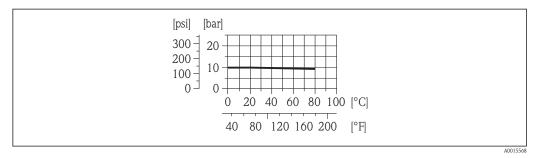

With lap joint flange PN 10, material 1.4306/304L (DN 200 / 8")

Flange connection according to EN 1092-1 (DIN 2501)

With lap joint flange PN 10/16, materials S235JR (DN 50 to 200 / 2 to 8") and 1.4306/304L (DN 50 to 150 / 2 to 6"); With lap joint flange, stamped plate PN 10, material S235JR (DN 50 to 200 / 2 to 8")

Flange connection according to ASME B16.5

With lap joint flange Class 150, materials 1.4404/316L and A105 (DN 50 to 200 / 2 to 8")

Flow limit

Select the nominal diameter by optimizing between the required flow range and permissible pressure loss.

For an overview of the measuring range full scale values, see the "Measuring range" section ($\rightarrow \stackrel{ ext{$=}}{=} 6$)

- The minimum recommended full scale value is approx. 1/20 of the maximum full scale value.
- In most applications, 10 to 50 % of the maximum full scale value can be considered ideal.

Pressure loss

There is no pressure loss.

System pressure

Sensor

Max. 10 bar (145 psi)

Thermal insulation

For optimum temperature and methane fraction measurement (order characteristic for "Sensor version", option 2 "Volume flow + Biogas analysis"), make sure that heat is neither lost nor applied to the sensor. Thermal insulation can ensure that such heat transfer does not take place.

Thermal insulation is particularly recommended in situations where there is a large difference between the process temperature and the ambient temperature. This can result in heat convection errors during temperature measurement. A further factor which can lead to measurement errors due to heat convection is a low flow velocity.

Materials

Transmitter housing

- Order code for "Housing", option **C**: aluminum coating AlSi10Mg
 Order code for "Housing", option **S**: stainless steel 1.4404/316L
- Window material: glass

Cable entries

Order code for "Housing", option C "GT20 two-chamber, aluminum coated"

Transmitter cable entries				
Electrical connection	Type of protection	Material		
Cable gland M20 × 1.5	■ Non-Ex ■ Ex ia	Plastic		
Thread G ½" via adapter	For non-Ex and Ex (except for CSA Ex d/XP)	Nickel-plated brass		
Thread NPT ½" via adapter	For non-Ex and Ex			

Transmitter neck cable entries			
Electrical connection	Measuring path	Material	
Cable gland M20 × 1.5	Two-path	Nickel-plated brass	
Cable gland M12 × 1.5	Single-path		

Sensor cable entries		
Electrical connection Material		
Cable gland M12 × 1.5	Nickel-plated brass	

Order code for "Housing", option S, "GT18 two-chamber, stainless steel"

Transmitter cable entries				
Electrical connection	Type of protection	Material		
Cable gland M20 × 1.5	■ Non-Ex ■ Ex ia	Stainless steel 1.4404		
Thread G ½" via adapter	For non-Ex and Ex (except for CSA Ex d/XP)	Stainless steel 1.4404/316L		
Thread NPT ½" via adapter	For non-Ex and Ex			

Transmitter neck cable entries		
Electrical connection	Sensor version	Material
Cable gland M20 × 1.5	Two-path	Stainless steel 1.4305
Cable gland M12 × 1.5	Single-path	

Sensor cable entries		
Electrical connection	Sensor version	Material
Cable gland M20 × 1.5	Two-path	Stainless steel 1.4305
Cable gland M12 × 1.5	Single-path	

Sensor housing

Stainless steel (cold worked):

- 1.4404/316L
- 1.4435/316L

Process connections

- Stainless steel:
 - 1.4301/304
 - 1.4306/304L
 - 1.4404/316L
- Steel S235JR
- Carbon steel A105
- List of all available process connections ($\rightarrow \stackrel{\triangle}{}$ 35)

Seals

■ Transducer: HNBR

■ Temperature sensor: AFM 34

Accessories

Replacement tool

- Knurled handle: aluminum
- Isolation valve: nickel-plated brass
- Shaft: brass
- Tensioning element: tempered steel

Flow conditioner

Stainless steel 1.4404/316L (in compliance with NACE MR0175-2003 and MR0103-2003)

Weather protection cover

Stainless steel 1.4301

34

Process connections

Flanges:

- EN 1092-1 (DIN 2501)
- ASME B16.5

For information on the materials of the process connections ($\rightarrow \stackrel{\triangle}{=} 34$)

Operability

Operating concept

Operator-oriented menu structure for user-specific tasks

- Commissioning
- Operation
- Diagnostics
- Expert level

Quick and safe commissioning

- Guided menus ("Make-it-run" wizards) for applications
- Menu guidance with brief explanations of the individual parameter functions

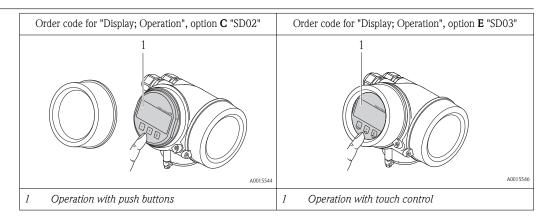

Reliable operation

- Operation in the following languages:
 - Via local display:
 - English, German, French, Spanish, Italian, Dutch, Portuguese, Polish, Russian, Turkish, Chinese, Japanese, Korean, Bahasa (Indonesian), Vietnamese, Czech, Swedish
 - $-\,$ Via "FieldCare" operating tool:
 - English, German, French, Spanish, Italian, Dutch, Japanese
- Uniform operating philosophy applied to device and operating tools
- If replacing the electronic module, transfer the device configuration via the integrated memory (integrated HistoROM) which contains the process and measuring device data and the event logbook. No need to reconfigure.

Efficient diagnostics increase measurement availability

- Troubleshooting measures can be called up via the device and in the operating tools
- Diverse simulation options, logbook for events that occur and optional line recorder functions

Local operation

Display elements

- 4-line display
- In the case of order code for "Display; Operation", option **E**: white background lighting; switches to red in event of device errors
- Format for displaying measured variables and status variables can be individually configured
- Permitted ambient temperature for the display: -20 to +60 °C (-4 to +140 °F)

 The readability of the display may be impaired at temperatures outside the temperature range.

Operating elements

- In the case of order code "Display; Operation", Option **C**: local operation with 3 push buttons (⑤, ⑥, ⑥)
- In the case of order code for "Display; Operation", option **E**: external operation via touch control; 3 optical keys: ⑤, ⑥, ⑥, ⑥
- Operating elements also accessible in various hazardous areas

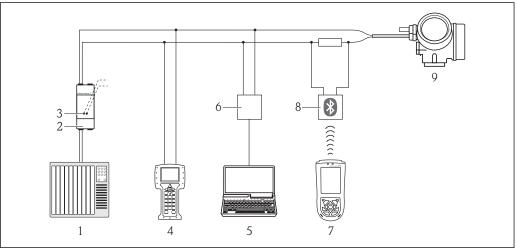

Additional functionality

- Data backup function
 - The device configuration can be saved in the display module.
- Data comparison function
 The device configuration saved in the display module can be compared to the current device configuration.
- Data transfer function

The transmitter configuration can be transmitted to another device using the display module.

Remote operation

Via HART protocol

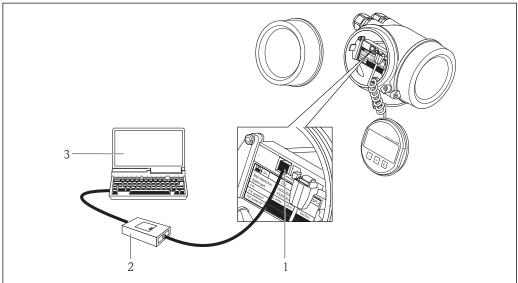

A0013

14 Options for remote operation via HART protocol

- 1 Control system (e.g. PLC)
- 2 Transmitter power supply unit, e.g. RN221N (with communication resistor)
- 3 Connection for Commubox FXA195 and Field Communicator 475
- 4 Field Communicator 475
- 5 Computer with operating tool (e.g. FieldCare, AMS Device Manager, SIMATIC PDM)
- 6 Commubox FXA195 (USB)
- 7 Field Xpert SFX100
- 8 VIATOR Bluetooth modem with connecting cable
- 9 Transmitter

Via service interface (CDI)

- Service interface (CDI = Endress+Hauser Common Data Interface) of the measuring device
- Commubox FXA291
- Computer with "FieldCare" operating tool with COM DTM "CDI Communication FXA291"

Certificates and approvals

CE mark

The measuring system is in conformity with the statutory requirements of the applicable EC Directives. These are listed in the corresponding EC Declaration of Conformity along with the standards applied.

Endress+Hauser confirms successful testing of the device by affixing to it the CE mark.

C-Tick symbol

The measuring system meets the EMC requirements of the "Australian Communications and Media Authority (ACMA)".

Ex approval

The measuring device is certified for use in hazardous areas and the relevant safety instructions are provided in the separate "Safety Instructions" (XA) document. Reference is made to this document on the nameplate.

The separate Ex documentation (XA) containing all the relevant explosion protection data is available from your Endress+Hauser sales center.

ATEX/IECEx

Currently, the following versions for use in hazardous areas are available:

Ex d

Category	Type of protection
II2G / Zone 1	Ex d[ia] IIC T6-T1 Gb

Ex ia

Category	Type of protection
II2G / Zone 1	Ex ia IIC T6-T1 Gb

CSA_{US}

Currently, the following versions for use in hazardous areas are available:

XP

Category	Type of protection
Class I Division 1 Groups ABCD	XP (Ex d Flameproof version)

IS

Category	Type of protection
Class I Division 1 Groups ABCD	IS (Ex i Intrinsically safe version), Entity-Parameter*

NI

Category	Type of protection
Class I Division 2 Groups ABCD	NI (Non-incendive version), NIFW-Parameter*

^{*=} Entity and NIFW parameters according to control drawings

NEPSI

Currently, the following versions for use in hazardous areas are available:

Ex d

Category	Type of protection
Zone 1	Ex d[ia] IIC T6-T1 Gb

Ex ia

Category	Type of protection
Zone 1	Ex ia IIC T6-T1 Gb

Pressure Equipment Directive

The devices can be ordered with or without a PED approval. If a device with a PED approval is required, this must be explicitly stated in the order.

- With the identification PED/G1/x (x = category) on the sensor nameplate, Endress+Hauser confirms conformity with the "Basic Safety Requirements" specified of Appendix I of the Pressure Equipment Directive 97/23/EC.
- Devices bearing this marking (PED) are suitable for the following types of medium:
 Media in Group 1 and 2 with a vapor pressure greater than, or smaller and equal to 0.5 bar (7.3 psi)
- Devices not bearing this marking (PED) are designed and manufactured according to good engineering
 practice. They meet the requirements of Art.3 Section 3 of the Pressure Equipment Directive 97/23/EC.
 The range of application is indicated in tables 6 to 9 in Annex II of the Pressure Equipment Directive.

Other standards and guidelines

■ EN 60529

Degrees of protection provided by enclosures (IP code)

■ EN 61010-

Protection Measures for Electrical Equipment for Measurement, Control, Regulation and Laboratory Procedures

■ IEC/EN 61326

Emission in accordance with Class A requirements. Electromagnetic compatibility (EMC requirements)

■ NAMUR NE 21

Electromagnetic compatibility (EMC) of industrial process and laboratory control equipment

■ NAMUR NE 32

Data retention in the event of a power failure in field and control instruments with microprocessors

■ NAMUR NE 43

Standardization of the signal level for the breakdown information of digital transmitters with analog output signal.

- NAMUR NE 53
 - Software of field devices and signal-processing devices with digital electronics
- NAMUR NE 80
- The application of the pressure equipment directive to process control devices
- NAMUR NE 105
 - Specifications for integrating fieldbus devices in engineering tools for field devices
- NAMUR NE 107
 - Self-monitoring and diagnosis of field devices
- NAMUR NE 131

Requirements for field devices for standard applications

Ordering information

Detailed ordering information is available from the following sources:

- In the Product Configurator on the Endress+Hauser website: www.endress.com → Select country → Instruments → Select device → Product page function: Configure this product
- From your Endress+Hauser Sales Center: www.endress.com/worldwide

•

Product Configurator - the tool for individual product configuration

- Up-to-the-minute configuration data
- Depending on the device: Direct input of measuring point-specific information such as measuring range or operating language
- Automatic verification of exclusion criteria
- Automatic creation of the order code and its breakdown in PDF or Excel output format
- Ability to order directly in the Endress+Hauser Online Shop

Application packages

Many different application packages are available to enhance the functionality of the device. Such packages might be needed to address safety aspects or specific application requirements.

The application packages can be ordered from Endress+Hauser either directly with the device or subsequently. Detailed information on the order code in question is available from your local Endress+Hauser sales center or on the product page of the Endress+Hauser website: www.endress.com.

Diagnostics functions

Package	Description
HistoROM extended function	Comprises extended functions concerning the event log and the activation of the measured value memory (data logger).
	Event log: Memory volume is extended from 20 message entries (basic version) to up to 100 entries.
	Data logging (line recorder): • Memory capacity for up to 1000 measured values is activated. • 250 measured values can be output via each of the 4 memory channels. The recording interval can be defined and configured by the user. • Data logging is visualized via the local display or FieldCare.

Accessories

Various accessories, which can be ordered with the device or subsequently from Endress+Hauser, are available for the device. Detailed information on the order code in question is available from your local Endress+Hauser sales center or on the product page of the Endress+Hauser website: www.endress.com.

Device-specific accessories

For the transmitter

Accessories	Description

Prosonic Flow 200 transmitter	Transmitter for replacement or storage. Use the order code to define the following specifications: Approvals Output Display / operation Housing Software For details, see Installation Instructions EA00104D
Weather protection cover	Is used to protect the measuring device from the effects of the weather: e.g. rainwater, excess heating from direct sunlight or extreme cold in winter. For details, see Installation Instructions SD00333F

For the sensor

Accessories	Description			
Replacement tool	Is used to remove the transducers on the fly for cleaning or replacement purposes. For details, see Installation Instructions EA00108D			
Flow conditioner	Is used to shorten the necessary inlet run.			

Communication-specific accessories

Accessories	Description	
Commubox FXA191 HART	For intrinsically safe HART communication with FieldCare via the RS232C interface. For details, see "Technical Information" TI00237F	
Commubox FXA195 HART	For intrinsically safe HART communication with FieldCare via the USB interface. For details, see "Technical Information" TI00404F	
Commubox FXA291	Connects Endress+Hauser field devices with a CDI interface (= Endress+Hauser Common Data Interface) and the USB port of a computer or laptop. For details, see "Technical Information" TI00405C	
HART Loop Converter HMX50	Is used to evaluate and convert dynamic HART process variables to analog current signals or limit values. For details, see "Technical Information" TI00429F and Operating Instructions BA00371F	
WirelessHART adapter	Is used for the wireless connection of field devices. The WirelessHART adapter can be easily integrated into field devices and existing infrastructures, offers data protection and transmission safety and can be operated in parallel with other wireless networks with minimum cabling complexity. For details, see Operating Instructions BA00061S	
Fieldgate FXA320	Gateway for the remote monitoring of connected 4-20 mA measuring devices via a Web browser. For details, see "Technical Information" TI00025S and Operating Instructions BA00053S	
Fieldgate FXA520	Gateway for the remote diagnostics and remote configuration of connected HART measuring devices via a Web browser. For details, see "Technical Information" TI00025S and Operating Instructions BA00051S	

Field Xpert SFX100	Compact, flexible and robust industry handheld terminal for remote configuration and for obtaining measured values via the HART current output (4-20 mA).
	For details, see Operating Instructions BA00060S

Service-specific accessories

Accessories	Description		
Applicator	Software for selecting and sizing Endress+Hauser measuring devices: Calculation of all the necessary data for identifying the optimum flowmeter: e.g. nominal diameter, pressure loss, accuracy or process connections. Graphic illustration of the calculation results		
	Administration, documentation and access to all project-related data and parameters over the entire life cycle of a project.		
	Applicator is available: Via the Internet: https://wapps.endress.com/applicator On CD-ROM for local PC installation.		
W@M	Life cycle management for your plant W@M supports you with a wide range of software applications over the entire process: from planning and procurement, to the installation, commissioning and operation of the measuring devices. All the relevant device information, such as the device status, spare parts and device-specific documentation, is available for every device over the entire life cycle. The application already contains the data of your Endress+Hauser device. Endress +Hauser also takes care of maintaining and updating the data records. W@M is available: Via the Internet: www.endress.com/lifecyclemanagement On CD-ROM for local PC installation.		
FieldCare	FDT-based plant asset management tool from Endress+Hauser. It can configure all smart field units in your system and helps you manage them. By using the status information, it is also a simple but effective way of checking their status and condition.		
	For details, see Operating Instructions BA00027S and BA00059S		

System components

Accessories	Description
Memograph M graphic display recorder	The Memograph M graphic data manager provides information on all the relevant measured variables. Measured values are recorded correctly, limit values are monitored and measuring points analyzed. The data are stored in the 256 MB internal memory and also on a SD card or USB stick.
	For details, see "Technical Information" TI00133R and Operating Instructions BA00247R
RN221N	Active barrier with power supply for safe separation of 4–20 mA standard signal circuits. Offers bidirectional HART transmission.
	For details, see "Technical Information" TI00073R and Operating Instructions BA00202R
RNS221	Supply unit for powering two 2-wire measuring devices solely in the non-Ex area. Bidirectional communication is possible via the HART communication jacks.
	For details, see "Technical Information" TI00081R and Brief Operating Instructions KA00110R
Cerabar M	The pressure transmitter for measuring the absolute and gauge pressure of gases, steam and liquids. It can be used to read in the operating pressure value via the HART protocol.
	For details, see "Technical Information" TI00426P, TI00436P and Operating Instructions BA00200P, BA00382P

Cerabar S	The pressure transmitter for measuring the absolute and gauge pressure of gases, steam and liquids. It can be used to read in the operating pressure value via the HART protocol.
	For details, see "Technical Information" TI00383P and Operating Instructions BA00271P

Documentation

- The following document types are available:

 On the CD-ROM supplied with the device
 - In the Download Area of the Endress+Hauser Internet site: www.endress.com \rightarrow Download

Standard documentation

Device type	Communication	Document type	Documentation code
9B2B**-		Brief Operating Instructions	KA01096D
	HART	Operating Instructions	BA01031D
	HART	Description of Device Parameters	GP01012D
