Re: Trishe Wind Ohio, LLC, Case No. 13-197-EL-BGN

Dear Ms. McNeal:

This filing corrects the letter filed on October 13, 2015 with respect to **Supplement Commitment No. 4**, which requires that:

Applicant will have a vegetation management plan. Prior to commencement of construction, Applicant will submit this plan to OPSB Staff for review and acceptance. The plan will identify all areas of proposed vegetation clearing for the Facility, specifying the extent of the clearing, and describing how such clearing work will be done so as to minimize removal of woody vegetation. The plan will also describe how trees and shrubs around structures, along access routes, at construction staging areas, during operation and maintenance, and in proximity to any other facilities will be protected from damage. Priority will be given to protecting mature trees throughout the Project area, and all woody vegetation in wetlands and riparian areas, both during construction and during subsequent operation and maintenance of all facilities; low-growing trees and shrubs in particular will be protected wherever possible within the proposed right-of-way. The vegetation management plan will also explore various options for disposing of downed trees, brush, and other vegetation during initial clearing for the Facility, and recommend methods that minimize the movement of heavy equipment and other vehicles within the right-of-way that would otherwise be required for removing all trees and other woody debris off site.

The October 13, 2015 letter indicated that the area in which the foundation work to be conducted at the substation site would not generally involve the clearing of riparian vegetation and that a vegetation management plan would not be required for this phase of the construction. It has been discovered that there is some vegetation clearing that will be necessary for the driveway to the substation. Attached is a copy of the Vegetation Plan that pertains to the clearing of vegetation for the substation driveway as shown on the drawings submitted on October 19, 2015. Thus, this letter is to inform the OPSB Staff that Trishe is in compliance with Supplement Commitment No. 4 for the foundation work at the substation.

If you have any questions please call at the number listed above.

Sincerely,

Sally W. Bloomfield

Vegetation Plan

Please see Dashiell drawing 700941A-DE0-17000P for area requiring vegetation clearing for the construction of the NW Ohio Substation.

- The area to be cleared is labeled on the drawing.
- The vegetation will be removed by clearing the trees and stripping and grubbing for topsoil and root removal.
- Once the driveway is constructed there will not be vegetation requiring protection during construction or O&M of the facility.
- There is no wetland area involved in the substation project.
- Vegetation and trees will be hauled off.
- This is a very small area to be cleared with no impact to the right of way outside of the driveway being constructed.
