COMMENT DESCRIPTION:

In regards to Case No.15-1921-EL-BGA --the proposed wind electric generating project in the Greenwich area. I'm sure you are aware of the huge environmental foot print, and many other negative effects of these huge industrial electric generating units. The property rights of many will be very negatively effected, while at the same time, we receive no electricity or benefit. In fact I'm told that it's going to cause our electric bills to go up. These generators don't produce a constant source of electricity, Any excess electricity from them, that may be generated , can't be stored. Natural gas or coal fired generating plants are still required to produce a constant source of power. Natural Gas generators seem to be a much more economical and better clean energy option. If these weren't subsidized by the government, they would NEVER be put up. I understand subsidies for these wind generators, are being stopped in some European countries, because the wind generators aren't working out there. The

companies putting them up, make much of their profits directly from these subsidies. They would never happen if they had to rely on only the electricity they generate, for their profits. I realize these wind generators, or this (so called renewable energy source) is the (politically correct) thing to do these days in this country, no matter that they just don't work out for many reasons. Too bad we don't have true science and what makes sense, determining what is done, instead of bureaucrats with an agenda, causing much environmental damage and suffering for many. Please consider not allowing these monsters to be put up in our midst, for the rest of our lives.
