Wednesday, December 16, 2015

Public Utilities Commission of Ohio,

I am writing to you as an Ohio Citizen who cares for and believes in the good welfare of our Ohio environment. Please look into denying the rate increase locking consumers into buying energy from Ohio's coal plants. My family and I care about reducing the toxic pollution caused by coal plants and believe that Ohio can be a leader in renewable energies.

This issue is important to me because I grew up working the earth as one of Ohio's farmers. I have benefited from a quality education given to me by my community. I went to an Ohio university to earn a degree in education. I stayed in Ohio to give back to the community that has given so much to me. I believe in Ohioans looking out for Ohioans.

Bailing out old, polluting technology does not benefit the average citizen and all the great things are state could be. Please do not bail out First Energy as they have requested. 14-1297-EI-SSO. Push Ohio to be better.

Thank you for your time.

Dear PUCO,

I am writing to inform you that case 14-1297-EL-SSO is very important to me! My family and I are about reducing toxic pollution and saving money on our electric bills.

It upsets me that a bailout of old polluting technology only benefits utility shareholders and delays investment in efficiency and renewable energy. We must reduce our dependence on coal and look to alternative sources that are healthier for us and our environment.

Thank you for your time and consideration!

Sincerely,
Stacey L Vulgamatt

Dear Public Utilities Commission of Ohio,

Please deny the rate increase to lock customers into buying power from coal plants.

This issue matters to my family because the environment - now especially climate change - affect the health + economic stability of everyone on the planet.

I want a Commission that puts people's best interests along with the environment, above that of corporations + their profits.

I encourage you to promote renewable energy sources + the businesses that support them.

Sincerely,

Cara Parker -

Medina, OH

14-1297-EL-SSD

Dear Public Utilities Commission of
OHIO,

I am opposed to paying more on my electric bill to support dirty and inefficient power plants. If FirstEnergy wishes to continue running them, let their stock holders foot the bill instead of fobbing it off on "Main Street". I would be happy to pay a little more if I knew it would be going to cleaner + renewable energy sources. Thank you, Rachel Webb

To Whom it concerns -

My family and I care a great deal about our natural environment.

We love to walk in the Metroparks with our dogs, swim in Lake Erie when proven safe and enjoy seeing the beauty of nature that surrounds us. We would like to see toxic pollution not just reduced, but completely eliminated. It is important to care for the lakes and rivers that we not only enjoy, but that sustain us.

To whom it may concern,

I am writing to express my concern about case # 14-1297-EL-550. I am mad about how energy companies are asking for rate increases when these companies have made millions of dollars every year. We, as a nation, are trying to become more energy efficient every year.

My wife and I have taught our children how to be conservative with energy usage and in all phases of our lives. We recycle, drive fuel efficient cars (all our cars are four cylinders) and how to purchase environmentally friendly products. We have made changes in our lives, it is time to tell these energy companies (AEP, Duke and First energy) that they need to be cleaner. No rate increase for coal powered power plants. We need clean energy - the energy companies will reap rewards for years to come. We need to reduce toxins in our environment - we can, if we limit coal fired power plants.

Thank you, sincerely

Chad Nelson

RE: FirstEnergy bailout, case #14-1297-EL-SSO

Dear PUCO Members:

As many Americans must make significant and difficult adjustments to accommodate changing financial times, so too must the energy companies. Americans do not receive bailouts when they have not made necessary adjustments. Of course they don't receive bailouts at all.

Why then should corporations receive public bailout money to make significant and difficult adjustments?

Please deny the rate increase to lock consumers into buying power from Ohio's outdated coal plants.

This is especially important inasmuch as corporations are now considered "people" by the Supreme Court. If they have that privilege, then they can make the same sacrifices as do the people of America.

Sincerely,

Gail A. Keesecker

As a resident of Willoughby, Ohio, I am informing you that I do not support price increases in energy from coal-fired electric plants and will only support renewable energy. It is unfair to ask for community support to enable old, outdated plants to continue disrupting the environment and making profits from dirty energy when there are viable, eco-friendly alternatives. It's time Ohio jump on the bandwagon of sustainability, get off of the pay-to-play merry-go-round, and support Ohio Citizen Action.

To PUCO:

I am writing to urge you to stop the financial bailout of Ohio's outdated, dirty coal plants and to end the freeze on Ohio's clean energy standards. Our drinking water should be safe and free from pollution. Lake Erie and the Ohio River need to be clean and free from mercury and other contamination. We have seen the effects pollution has had in other states and other countries. There is something inherently wrong when health care providers instruct us to take care of ourselves through diet and exercise but to limit our fish consumption due to mercury contamination. We live in a state that is considered to be part of the Midwest – an area of farms and agriculture, an area of clean, healthy living. Of course we need electricity but our coal burning plants are outdated and unsafe. There is corrosion and there have been near accidents. Limiting pollution to our air and water leads to fewer deaths and illnesses for everyone. We need clean energy programs. My family and I care about reducing the toxic pollution and saving money on our electric bills. I am asking that you please deny the rate increase to lock consumers into buying power from these old, dirty coal plants. A bailout only benefits utility shareholders and delays investment in efficiency and renewable energy. Please oppose an "indefinite freeze" of our clean energy standards. Let's move forward to clean energy and clean living.

Sincerely,

Caroline Perovsek

To Whom It May Concern:

I am writing this letter to you at the PUCO because of case number 14-1297-EL-SSO. I urge you to reject the proposal of Duke Energy, AEP, and First Energy to get permission to raise consumer rates and use the profits to cover the costs of the outdated and inefficient coal plants. This would effectively shift the cost of these outdated coal plants to consumers. I do not believe that I should be forced to bailout these companies because they choose to employ outdated and inefficient coal plants.

I pay my bill to ensure that my family has the comforts that are provided by this energy. However, I also care about reducing toxic pollution. I do not believe that my neighbors and I should be forced to perpetuate the creation of pollution in Ohio by bailing out the companies that have failed to update their plants. We've already paid millions of dollars to these companies to help them transition into deregulation under a 1999 Ohio law.

Please deny the rate increase to lock consumers into buying power from Ohio's oldest and dirtiest coal plants. A bailout of old, polluting technology only benefits utility shareholders and delays inevitable investment in efficiency and renewable energy.

Sincerely,

A handwritten signature in cursive script that reads "Frank R. Srp".

I pay my bill to ensure that my family has the comforts that are provided by this energy. However, I also care about reducing toxic pollution. I do not believe that my neighbors and I should be forced to perpetuate the creation of pollution in Ohio by bailing out the companies that have failed to update their plants. We've already paid millions of dollars to these companies to help them transition into deregulation under a 1999 Ohio law.

Please deny the rate increase to lock consumers into buying power from Ohio's oldest and dirtiest coal plants. A bailout of old, polluting technology only benefits utility shareholders and delays inevitable investment in efficiency and renewable energy.

Sincerely,

A handwritten signature in black ink, appearing to read 'M J Acomb', written in a cursive style.

Public Utilities Commission of Ohio
Attention Case Number 14-1297-EL-SSO
180 East Broad St
Columbus, OH 43215

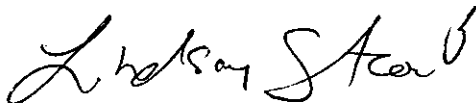

To Whom It May Concern:

I am writing this letter to you at the PUCO because of case number 14-1297-EL-SSO. I urge you to reject the proposal of Duke Energy, AEP, and First Energy to get permission to raise consumer rates and use the profits to cover the costs of the outdated and inefficient coal plants. This would effectively shift the cost of these outdated coal plants to consumers. I do not believe that I should be forced to bailout these companies because they choose to employ outdated and inefficient coal plants.

I pay my bill to ensure that my family has the comforts that are provided by this energy. However, I also care about reducing toxic pollution. I do not believe that my neighbors and I should be forced to perpetuate the creation of pollution in Ohio by bailing out the companies that have failed to update their plants. We've already paid millions of dollars to these companies to help them transition into deregulation under a 1999 Ohio law.

Please deny the rate increase to lock consumers into buying power from Ohio's oldest and dirtiest coal plants. A bailout of old, polluting technology only benefits utility shareholders and delays inevitable investment in efficiency and renewable energy.

Sincerely,

Public Utilities Commission of Ohio
180 East Broad Street
Columbus, OH 43215-6117

Dear commissioners:

First I'd like to thank you for your service to our state. I am writing regarding a currently case regarding **First Energy, case 14-1297-EL-SSO** which I believe will shift unnecessary costs to electric ratepayers of Ohio. For one Davis Besse has been a problem since initial activation in the 70s. Haven't we had enough trouble with it? Yet First Energy wants to force ratepayers to use energy from that plant and other plants that are less efficient than cleaner forms of energy available today.

After my aunt died of some form of cancer 20 years ago my uncle told me they were looking into the unusually high percentage of people in this area who've died of cancer and other such illnesses. We know nuclear and coal burning energy can be unhealthy. It's possible these types of energies have caused health problems for Ohioans like my aunt. Why would we want to continue using them if there is a risk of harm when there are other more efficient, less dangerous options available?

Using these plants will additionally cost more to the ratepayers. Does that make senses? Should we pay more for something that doesn't work as well as other forms of energy? At the time they were the best we could get. That is no longer true. **Please deny First Energy's request for a rate increase.** We shouldn't have to pay for plants like Davis Besse that are no longer efficient and are potentially still unsafe. **Please let these old unreliable, unsafe and costly plants rest in peace.** Don't force us to give more of our hard earned money to First Energy which will not improve our quality of life in any way as far as I can tell.

Thank you again for your service and expertise. I hope you will do what is best for the people of Ohio and in favor of one company and its shareholders.

Best regards,

ANTHONY J. FARINA

Columbus, OH 43215

Dear PUCO members:

Please do not allow the plight of poorly managed, old technology polluters to cost consumers to repair. The utility shareholders should not be gaining dollars on the backs of us who have no choice in how they spend our money.

There is new technology that is cheaper to operate and less or non-polluting. Most of us consumers cannot bear any more costs passed on to us. Our thermostats are as low as they can go. We wear less so we don't need to launder as much. We are back to hanging our clothes outside to dry. If we shower less, our heat and water bills are lower.

Davis-Pesce is a threat to our environment with a spent or leaking fuel. Our lives are in danger if there is a "major incident." We should invest in new and cleaner methods. Unfortunately, our modern lives depend on the utility monopolies, leaving consumers very little choices. The shareholders of these companies should not lead by greed. Who looks after our Earth and all its inhabitants?

Let the "little" folks be heard. Encourage investment in more economical, less-polluting ways to supply power. Vote to save our Earth and save our money. Shareholders shouldn't be passing you, so please do the right thing. Thank you,

Jeannette Schmidt

Dear PUCO,

This letter is regarding First Energy case number 14-1297-EL-SSO, before the PUCO.

As a concerned citizen who cares both about our economy, other working families, and a clean world for our children, I applaud the recent decision of the PUCO on April 2 of this past year to deny Duke Energy the unfair right to charge Ohio citizens for electricity from coal-fired plants regardless of whoever provides our power.

In a changing world with emerging and innovative energy sources it makes no sense for Ohio families to sustain old technologies at the expense of exploring modern solutions that will ensure Ohio's future for industry is competitive and vibrant.

Please ensure that Ohio families are protected from a senseless and harmful rate increase that will do nothing for ordinary people but hurt their already strained family budgets.

To whom it May Concern

Regarding FirstEnergy 14-1297-EL-SSO
It has come to my attention that the energy
companies that provide my electrical power are
asking for a rate increase that will
affect my monthly bill. I am a widow
living on a limited monthly social security
benefit. It's unfair for these companies
to shift their increased costs to me as a
consumer. Is there not another way for
them to deal with their outdated facilities?
Please, deny them this rate increase. Let
them and their shareholders face the inevitable
updating of their facility. Not the public.
Not me.

Dear Sir

As a concerned Ohio citizen, I am writing to you regarding our environment and the future world my grandchildren will grow up and inherit. I trust you also hold the same concerns so I request your support for the following points.

- My family and I care about reducing toxic pollution and saving money on our electric bills
- Please deny the rate increase which requires consumers to buy power from coal plants
- We must reduce our dependence on coal for electricity to protect our drinking water
- By reducing and limiting the air and water pollution – we will have a better chance at a healthier lifestyle while reducing sickness and deaths related to these avoidable situations
- I am requesting you to oppose the “indefinite freeze” of our clean energy standards

As an elected official, I request you to hear my concerns and take action. I would welcome your response on how you will help make Ohio a better place for my family and yours.

Thanks in advance

Case # 14-1297-EL-SSO

Dear PUCO,

I am a concerned Ohio born citizen. I've watched as our states ability to transition from Fossil Fuel and Nuclear Power Plants have failed our environmental best interests, the air we breathe, and ultimately the very health of our citizens.

There are reasons that science backed statistics have, in general, been ignored. They don't pay groups like PUCO the funding it needs to support the old polluting technologies; which are in dire need of upgrading. Once again as in 1999, the consumer is asked to step up and cover the costs necessary to upgrade these producers of energy.

Isn't it time to start asking these power sources to shoulder the responsibility of these upgrades themselves?? The amount of dollars that we pay for the luxury of having heat in the winter months, cool air during the summer and a lamp to read by at night are completely ridiculous. What do we get for our dollar? Pollution and toxic byproducts; which destroy our lungs, cause needless medical issues such as asthma environmental allergies (which we all suffer from in the Ohio Valley) and COPD. Just to site in general a few.

Please think of all Ohio consumers. Please deny the rate increase to lock consumers into buying power from Ohio's oldest, dirtiest coal plants.

Why so concerned about these outdated power plants functionality? While I am in my middle years of life, I have legacy to be concerned about. Will my children and grandchildren be victims of some legislature that does not protect them from something as simple as the source of energy that lights the lamps they read by?

The only benefit from having consumers pay for these updates is the lining of the pockets of our politicians, PUCO and investors.

We have no choice, we must purchase energy from an already established source. Consider having PUCO start looking at alternative means of supporting the energy upgrades, which are needed. Invest toward our future.

Kind Regards,
Scott Nieman

Dear Pucco,

Allowing First Energy to fail will have many negative implications. Holding them accountable

to even the most basic energy standards will result in lost jobs and an unreliable future.

However, this does not mean that this broken and toxic utilities company should be catered to for any longer. The fact (that even First Energy itself has agreed to) is that it is unable to function without being a detriment to the environment.

Putting the economic burden on the people of Ohio to fund the pollution of their own land is inexcusable. So, while there will be change,

at the very least, protecting our planet - and by extension the citizens of Ohio - must be a given.

No matter which decision is made, there will be implications. You are now in a position to push Ohio into the new, more sustainable future.

Whether First Energy dies now or in 15 years, it has shown that it can't last. Therefore why not do what is best for your state and your planet. Thank you for putting our interests first.

Stop the bailouts. End the freeze.

Sarah

To the Public Utilities Commission of Ohio,

I write to you with concerns about the energy situation in the state of Ohio. Please deny the rate increase locking Ohio consumers into buying from substandard coal plants. Also, please oppose an indefinite freeze on our clean energy standards; my family and I care about reducing pollution and saving money on our electric bills. Please consider the needs of Ohio and all Ohioans as opposed to just utility shareholders.

Sincerely,

David Moll

My Family and I care about reducing
toxic Pollution and saving money on our
electric bills.

Many cities reduce pollution by getting
out coal plants and establishing solar
panels & wind mills.

Providing enough land renewable energy
development will protect lands that are homes
to endangered species. We can prevent more
than half the pollution to lake Erie,
rising global temperatures, rising sea
levels and change in weather and precipitation.

This change threaten American lives,
our own future generations, most of all
Climate Change.

Our most vulnerable citizens include
our very own children. If you have children

Please say NO to Coal BAILOUTS
