Dear Members of PUCO,

My name is Ella Beyreis, and I am 12 years old. I am writing to you today in regards to the FirstEnergy case, 14-1297-EL-SSO. I believe that FirstEnergy should not be allowed to continue using their outdated coal-fired power plants while asking the public to pay for them. Not only does this put an extra cost on the citizens of the state, it pollutes our atmosphere. There is plenty of scientific evidence to show a distinct connection between the amount of carbon dioxide and methane in the air and fluctuating temperatures and poor air quality around the globe. *The New York Times* has collected testimonials from citizens in large urban areas, especially in China and India, about how they feel about their air quality. Individuals speak of burning sensations in their lungs and coughs that never go away. This bailout of coal-fired power plants only delays a move towards sustainable energy, something that we definitely need more of on our planet. I don't want my grandchildren, my children, myself, or the rest of the world to have to contend with rising sea levels and powerful superstorms, not to mention the danger posed to humans and animals alike simply from inhaling the air around them. Renewable energies will slow what is happening to our planet.

The people of Ohio should not have to purchase power from outdated and inefficient plants. Please don't force Ohio's citizens to spend more money to put more pollutants into our atmosphere.

Sincerely,

Ella Beyreis

To Whom It May Concern:

I am writing regarding the FirstEnergy case number 14-1297-EL-550. I am asking that you please deny the rate increase to lock consumers into buying power from Ohio's oldest, dirtiest coal plants. It's wrong for tax payers dollars to be used to bail out these old coal plants like Kyger Creek and Clisty Creek. We need to reduce toxic pollution help improve our economy by saving money on tax payers electric bills.

Sincerely,
Holly Howard

Re: Pollution

PUCO

My family and I care about reducing pollution and believe that the energy companies have the responsibility and the means to upgrade to newer, cleaner technology that is more efficient. The cost of such upgrades should come out of the profits the energy companies have already enjoyed; not from my pocket. I should not have to bail out a company that has profitable operations. That company should fund the upgrade themselves.
