Subject: FirstEnergy should focus on clean energy in wake of retirements!
Date: Monday, July 25, 2016 7:04:06 AM

Dear PUCO,

I was pleased to hear FirstEnergy announce it plans to retire 901 MWs of aging dirty coal generation at the W.H. Sammis and Bay Shore power plants. These units put out millions of tons of CO2 and tens of millions of pounds of SO2 and NOx each year leading Ohio to have some of the dirtiest air in the United States and contributing to significant environmental issues.

Retiring these units will lead to significant health and environmental benefits for the communities near these plants and all of those downwind. At the same time, it is imperative FirstEnergy provide plans and assistance for the communities in which these plants are located.

As FirstEnergy financially benefited for decades from these plants, and Ohioans consumed their power, the communities where these plants were located faced disproportionate adverse health impacts. It is FirstEnergy's responsibility to ensure the members of these communities do not now faced additional economic backlash as these plants no longer make financial sense and move towards retirement.

Retirement of old dirty generation is welcome news. It is my hope as this generation comes offline, you will support more emphasis on energy efficiency and renewable energy, and modernization of Ohio's electricity infrastructure, and that you will require FirstEnergy to develop and implement plans for the communities where the retiring plants are located.

Sincerely,

Steve Ricci

I was pleased to hear FirstEnergy announce it plans to retire 901 MWs of aging dirty coal generation at the W.H. Sammis and Bay Shore power plants. These units put out millions of tons of CO2 and tens of millions of pounds of SO2 and NOx each year leading Ohio to have some of the dirtiest air in the United States and contributing to significant environmental issues.

Retiring these units will lead to significant health and environmental benefits for the communities near these plants and all of those downwind. At the same time, it is imperative FirstEnergy provide plans and assistance for the communities in which these plants are located.

As FirstEnergy financially benefited for decades from these plants, and Ohioans consumed their power, the communities where these plants were located faced disproportionate adverse health impacts. It is FirstEnergy's responsibility to ensure the members of these communities do not now faced additional economic backlash as these plants no longer make financial sense and move towards retirement.

Retirement of old dirty generation is welcome news. It is my hope as this generation comes offline, you will support more emphasis on energy efficiency and renewable energy, and modernization of Ohio's electricity infrastructure, and that you will require FirstEnergy to develop and implement plans for the communities where the retiring plants are located.

Sincerely,

Terry Murcko

Retiring these units will lead to significant health and environmental benefits for the communities near these plants and all of those downwind. At the same time, it is imperative FirstEnergy provide plans and assistance for the communities in which these plants are located.

As FirstEnergy financially benefited for decades from these plants, and Ohioans consumed their power, the communities where these plants were located faced disproportionate adverse health impacts. It is FirstEnergy's responsibility to ensure the members of these communities do not now faced additional economic backlash as these plants no longer make financial sense and move towards retirement.

Retirement of old dirty generation is welcome news. It is my hope as this generation comes offline, you will support more emphasis on energy efficiency and renewable energy, and modernization of Ohio's electricity infrastructure, and that you will require FirstEnergy to develop and implement plans for the communities where the retiring plants are located.

Sincerely,

Susan Whipple

Dear PUCO,

I was pleased to hear FirstEnergy announce it plans to retire 901 MWs of aging dirty coal generation at the W.H. Sammis and Bay Shore power plants. These units put out millions of tons of CO2 and tens of millions of pounds of SO2 and NOx each year leading Ohio to have some of the dirtiest air in the United States and contributing to significant environmental issues.

Retiring these units will lead to significant health and environmental benefits for the communities near these plants and all of those downwind. At the same time, it is imperative FirstEnergy provide plans and assistance for the communities in which these plants are located.

As FirstEnergy financially benefited for decades from these plants, and Ohioans consumed their power, the communities where these plants were located faced disproportionate adverse health impacts. It is FirstEnergy's responsibility to ensure the members of these communities do not now faced additional economic backlash as these plants no longer make financial sense and move towards retirement.

Subject: FirstEnergy should focus on clean energy in wake of retirements!
Date: Saturday, July 23, 2016 8:20:51 PM

Dear PUCO,

I was pleased to hear FirstEnergy announce it plans to retire 901 MWs of aging dirty coal generation at the W.H. Sammis and Bay Shore power plants. These units put out millions of tons of CO2 and tens of millions of pounds of SO2 and NOx each year leading Ohio to have some of the dirtiest air in the United States and contributing to significant environmental issues.

Retiring these units will lead to significant health and environmental benefits for the communities near these plants and all of those downwind. At the same time, it is imperative FirstEnergy provide plans and assistance for the communities in which these plants are located.

As FirstEnergy financially benefited for decades from these plants, and Ohioans consumed their power, the communities where these plants were located faced disproportionate adverse health impacts. It is FirstEnergy's responsibility to ensure the members of these communities do not now faced additional economic backlash as these plants no longer make financial sense and move towards retirement.

Retirement of old dirty generation is welcome news. It is my hope as this generation comes offline, you will support more emphasis on energy efficiency and renewable energy, and modernization of Ohio's electricity infrastructure, and that you will require FirstEnergy to develop and implement plans for the communities where the retiring plants are located.

These units put out millions of tons of CO2 and tens of millions of pounds of SO2 and NOx each year leading Ohio to have some of the dirtiest air in the United States and contributing to significant environmental issues.

Retiring these units will lead to significant health and environmental benefits for the communities near these plants and all of those downwind. At the same time, it is imperative FirstEnergy provide plans and assistance for the communities in which these plants are located.

As FirstEnergy financially benefited for decades from these plants, and Ohioans consumed their power, the communities where these plants were located faced disproportionate adverse health impacts. It is FirstEnergy's responsibility to ensure the members of these communities do not now faced additional economic backlash as these plants no longer make financial sense and move towards retirement.

Retirement of old dirty generation is welcome news. It is my hope as this generation comes offline, you will support more emphasis on energy efficiency and renewable energy, and modernization of Ohio's electricity infrastructure, and that you will require FirstEnergy to develop and implement plans for the communities where the retiring plants are located.

Sincerely,

Barbara Baird

Dear PUCO,

I was pleased to hear FirstEnergy announce it plans to retire 901 MWs of aging dirty coal generation at the W.H. Sammis and Bay Shore power plants. These units put out millions of tons of CO2 and tens of millions of pounds of SO2 and NOx each year leading Ohio to have some of the dirtiest air in the United States and contributing to significant environmental issues.

Retiring these units will lead to significant health and environmental benefits for the communities near these plants and all of those downwind. At the same time, it is imperative FirstEnergy provide plans and assistance for the communities in which these plants are located.

It is FirstEnergy's responsibility to ensure the members of these communities do not now faced additional economic backlash as these plants no longer make financial sense and move towards retirement.

Retirement of old dirty generation is welcome news. It is my hope as this generation comes offline, you will support more emphasis on energy efficiency and renewable energy, and modernization of Ohio's electricity infrastructure, and that you will require FirstEnergy to develop and implement plans for the communities where the retiring plants are located.

Date: Saturday, July 23, 2016 12:44:54 PM

Dear PUCO,

I was pleased to hear FirstEnergy announce it plans to retire 901 MWs of aging dirty coal generation at the W.H. Sammis and Bay Shore power plants. These units put out millions of tons of CO2 and tens of millions of pounds of SO2 and NOx each year leading Ohio to have some of the dirtiest air in the United States and contributing to significant environmental issues.

Retiring these units will lead to significant health and environmental benefits for the communities near these plants and all of those downwind. At the same time, it is imperative FirstEnergy provide plans and assistance for the communities in which these plants are located.

As FirstEnergy financially benefited for decades from these plants, and Ohioans consumed their power, the communities where these plants were located faced disproportionate adverse health impacts. It is FirstEnergy's responsibility to ensure the members of these communities do not now faced additional economic backlash as these plants no longer make financial sense and move towards retirement.

Retirement of old dirty generation is welcome news. It is my hope as this generation comes offline, you will support more emphasis on energy efficiency and renewable energy, and modernization of Ohio's electricity infrastructure, and that you will require FirstEnergy to develop and implement plans for the communities where the retiring plants are located.

Ohio has lagged behind the rest of the country in developing clean, renewable energy. The elimination of coal-fired power plants gives us the chance to focus on renewable energy and create an environment that will attract businesses and families to the state.

Subject: FirstEnergy should focus on clean energy in wake of retirements!
Date: Saturday, July 23, 2016 10:46:07 AM

Dear PUCO,

I was pleased to hear FirstEnergy announce it plans to retire 901 MWs of aging dirty coal generation at the W.H. Sammis and Bay Shore power plants. These units put out millions of tons of CO2 and tens of millions of pounds of SO2 and NOx each year leading Ohio to have some of the dirtiest air in the United States and contributing to significant environmental issues.

Retiring these units will lead to significant health and environmental benefits for the communities near these plants and all of those downwind. At the same time, it is imperative FirstEnergy provide plans and assistance for the communities in which these plants are located.

As FirstEnergy financially benefited for decades from these plants, and Ohioans consumed their power, the communities where these plants were located faced disproportionate adverse health impacts. It is FirstEnergy's responsibility to ensure the members of these communities do not now faced additional economic backlash as these plants no longer make financial sense and move towards retirement.

Retirement of old dirty generation is welcome news. It is my hope as this generation comes offline, you will support more emphasis on energy efficiency and renewable energy, and modernization of Ohio's electricity infrastructure, and that you will require FirstEnergy to develop and implement plans for the communities where the retiring plants are located.

Sincerely,

Krista JonesGehring

Subject: FirstEnergy should focus on clean energy in wake of retirements!
Date: Saturday, July 23, 2016 9:06:40 AM

Dear PUCO,

I was pleased to hear FirstEnergy announce it plans to retire 901 MWs of aging dirty coal generation at the W.H. Sammis and Bay Shore power plants. These units put out millions of tons of CO₂ and tens of millions of pounds of SO₂ and NO_x each year leading Ohio to have some of the dirtiest air in the United States and contributing to significant environmental issues.

Retiring these units will lead to significant health and environmental benefits for the communities near these plants and all of those downwind. At the same time, it is imperative FirstEnergy provide plans and assistance for the communities in which these plants are located.

As FirstEnergy financially benefited for decades from these plants, and Ohioans consumed their power, the communities where these plants were located faced disproportionate adverse health impacts. It is FirstEnergy's responsibility to ensure the members of these communities do not now face additional economic backlash as these plants no longer make financial sense and move towards retirement.

Retirement of old dirty generation is welcome news. It is my hope as this generation comes offline, you will support more emphasis on energy efficiency and renewable energy, and modernization of Ohio's electricity infrastructure, and that you will require FirstEnergy to develop and implement plans for the communities where the retiring plants are located.

Sincerely,

Patricia Gallup

Dear PUCO,

I was more than pleased to hear this news since just this morning I heard a report on the radio regarding the deleterious affects of coal-fired power plants on the health of those living in proximity to them.

I was pleased to hear FirstEnergy announce it plans to retire 901 MWs of aging dirty coal generation at the W.H. Sammis and Bay Shore power plants. These units put out millions of tons of CO2 and tens of millions of pounds of SO2 and NOx each year leading Ohio to have some of the dirtiest air in the United States and contributing to significant environmental issues.

Retiring these units will lead to significant health and environmental benefits for the communities near these plants and all of those downwind. At the same time, it is imperative FirstEnergy provide plans and assistance for the communities in which these plants are located.

It is FirstEnergy's responsibility to ensure the members of these communities do not now faced additional economic backlash as these plants no longer make financial sense and move towards retirement.

Retirement of old dirty generation is welcome news. It is my hope as this generation comes offline, you will support more emphasis on energy efficiency and renewable energy, and modernization of Ohio's electricity infrastructure, and that you will require FirstEnergy to develop and implement plans for the communities where the retiring plants are located.

Subject: FirstEnergy should focus on clean energy in wake of retirements!
Date: Saturday, July 23, 2016 7:47:06 AM

Dear PUCO,

I was pleased to hear FirstEnergy announce it plans to retire 901 MWs of aging dirty coal generation at the W.H. Sammis and Bay Shore power plants. These units put out millions of tons of CO2 and tens of millions of pounds of SO2 and NOx each year leading Ohio to have some of the dirtiest air in the United States and contributing to significant environmental issues.

Retiring these units will lead to significant health and environmental benefits for the communities near these plants and all of those downwind. At the same time, it is imperative FirstEnergy provide plans and assistance for the communities in which these plants are located.

As FirstEnergy financially benefited for decades from these plants, and Ohioans consumed their power, the communities where these plants were located faced disproportionate adverse health impacts. It is FirstEnergy's responsibility to ensure the members of these communities do not now faced additional economic backlash as these plants no longer make financial sense and move towards retirement.

Retirement of old dirty generation is welcome news. It is my hope as this generation comes offline, you will support more emphasis on energy efficiency and renewable energy, and modernization of Ohio's electricity infrastructure, and that you will require FirstEnergy to develop and implement plans for the communities where the retiring plants are located.

Dear PUCO,

It's about time. It is good news that FirstEnergy announces that it plans to retire 901 MWs of aging dirty coal generation at the W.H. Sammis and Bay Shore power plants. These units put out millions of tons of CO2 and tens of millions of pounds of SO2 and NOx each year leading Ohio to have some of the dirtiest air in the United States and contributing to significant environmental issues.

Retiring these units will lead to significant health and environmental benefits for the communities near these plants and all of those downwind. At the same time, it is imperative FirstEnergy provide plans and assistance for the communities in which these plants are located.

As FirstEnergy financially benefited for decades from these plants, and Ohioans consumed their power, the communities where these plants were located faced disproportionate adverse health impacts. It is FirstEnergy's responsibility to ensure the members of these communities do not now faced additional economic backlash as these plants no longer make financial sense and move towards retirement.

Thus retirement of old dirty generation is welcome news. I hope as this dirty generation comes offline, you will support more emphasis on energy efficiency and renewable energy, and modernization of Ohio's electricity infrastructure, and that you will require FirstEnergy to develop and implement plans for the communities where the retiring plants are located.

Date: Saturday, July 23, 2016 1:49:26 AM

Dear PUCO,

I was pleased to hear FirstEnergy announce it plans to retire 901 MWs of aging dirty coal generation at the W.H. Sammis and Bay Shore power plants. These units put out millions of tons of CO2 and tens of millions of pounds of SO2 and NOx each year leading Ohio to have some of the dirtiest air in the United States and contributing to significant environmental issues.

Retiring these units will lead to significant health and environmental benefits for the communities near these plants and all of those downwind. At the same time, it is imperative FirstEnergy provide plans and assistance for the communities in which these plants are located.

As FirstEnergy financially benefited for decades from these plants, and Ohioans consumed their power, the communities where these plants were located faced disproportionate adverse health impacts. It is FirstEnergy's responsibility to ensure the members of these communities do not now faced additional economic backlash as these plants no longer make financial sense and move towards retirement.

Retirement of old dirty generation is welcome news. It is my hope as this generation comes offline, you will support more emphasis on energy efficiency and renewable energy, and modernization of Ohio's electricity infrastructure, and that you will require FirstEnergy to develop and implement plans for the communities where the retiring plants are located.

Sincerely,

Clare Puskarczyk

These units put out millions of tons of CO2 and tens of millions of pounds of SO2 and NOx each year leading Ohio to have some of the dirtiest air in the United States and contributing to significant environmental issues.

Retiring these units will lead to significant health and environmental benefits for the communities near these plants and all of those downwind. At the same time, it is imperative FirstEnergy provide plans and assistance for the communities in which these plants are located.

As FirstEnergy financially benefited for decades from these plants, and Ohioans consumed their power, the communities where these plants were located faced disproportionate adverse health impacts. It is FirstEnergy's responsibility to ensure the members of these communities do not now faced additional economic backlash as these plants no longer make financial sense and move towards retirement.

Retirement of old dirty generation is welcome news. It is my hope as this generation comes offline, you will support more emphasis on energy efficiency and renewable energy, and modernization of Ohio's electricity infrastructure, and that you will require FirstEnergy to develop and implement plans for the communities where the retiring plants are located.

Sincerely,

Pat Johnson

It is FirstEnergy's responsibility to ensure the members of these communities do not now faced additional economic backlash as these plants no longer make financial sense and move towards retirement.

Retirement of old dirty generation is welcome news. It is my hope as this generation comes offline, you will support more emphasis on energy efficiency and renewable energy, and modernization of Ohio's electricity infrastructure, and that you will require FirstEnergy to develop and implement plans for the communities where the retiring plants are located.

Sincerely,

Date: Friday, July 22, 2016 10:44:30 PM

Dear PUCO,

I was pleased to hear FirstEnergy announce it plans to retire 901 MWs of aging dirty coal generation at the W.H. Sammis and Bay Shore power plants. These units put out millions of tons of CO2 and tens of millions of pounds of SO2 and NOx each year leading Ohio to have some of the dirtiest air in the United States and contributing to significant environmental issues.

Retiring these units will lead to significant health and environmental benefits for the communities near these plants and all of those downwind. At the same time, it is imperative FirstEnergy provide plans and assistance for the communities in which these plants are located.

As FirstEnergy financially benefited for decades from these plants, and Ohioans consumed their power, the communities where these plants were located faced disproportionate adverse health impacts. It is FirstEnergy's responsibility to ensure the members of these communities do not now faced additional economic backlash as these plants no longer make financial sense and move towards retirement.

Retirement of old dirty generation is welcome news. It is my hope as this generation comes offline, you will support more emphasis on energy efficiency and renewable energy, and modernization of Ohio's electricity infrastructure, and that you will require FirstEnergy to develop and implement plans for the communities where the retiring plants are located.

Subject: FirstEnergy should focus on clean energy in wake of retirements!
Date: Friday, July 22, 2016 10:09:43 PM

Dear PUCO,

I was pleased to hear FirstEnergy announce it plans to retire 901 MWs of aging dirty coal generation at the W.H. Sammis and Bay Shore power plants. These units put out millions of tons of CO2 and tens of millions of pounds of SO2 and NOx each year leading Ohio to have some of the dirtiest air in the United States and contributing to significant environmental issues.

Retiring these units will lead to significant health and environmental benefits for the communities near these plants and all of those downwind. At the same time, it is imperative FirstEnergy provide plans and assistance for the communities in which these plants are located.

As FirstEnergy financially benefited for decades from these plants, and Ohioans consumed their power, the communities where these plants were located faced disproportionate adverse health impacts. It is FirstEnergy's responsibility to ensure the members of these communities do not now faced additional economic backlash as these plants no longer make financial sense and move towards retirement.

Retirement of old dirty generation is welcome news. It is my hope as this generation comes offline, you will support more emphasis on energy efficiency and renewable energy, and modernization of Ohio's electricity infrastructure, and that you will require FirstEnergy to develop and implement plans for the communities where the retiring plants are located.

Sincerely,

R A Mcmillan

I was pleased to hear FirstEnergy announce it plans to retire 901 MWs of aging dirty coal generation at the W.H. Sammis and Bay Shore power plants. These units put out millions of tons of CO2 and tens of millions of pounds of SO2 and NOx each year leading Ohio to have some of the dirtiest air in the United States and contributing to significant environmental issues.

Retiring these units will lead to significant health and environmental benefits for the communities near these plants and all of those downwind. At the same time, it is imperative FirstEnergy provide plans and assistance for the communities in which these plants are located.

As FirstEnergy financially benefited for decades from these plants, and Ohioans consumed their power, the communities where these plants were located faced disproportionate adverse health impacts. It is FirstEnergy's responsibility to ensure the members of these communities do not now faced additional economic backlash as these plants no longer make financial sense and move towards retirement.

Retirement of old dirty generation is welcome news. It is my hope as this generation comes offline, you will support more emphasis on energy efficiency and renewable energy, and modernization of Ohio's electricity infrastructure, and that you will require FirstEnergy to develop and implement plans for the communities where the retiring plants are located.

Sincerely,

Tracy Lyons

It is FirstEnergy's responsibility to ensure the members of these communities do not now faced additional economic backlash as these plants no longer make financial sense and move towards retirement.

Retirement of old dirty generation is welcome news. It is my hope as this generation comes offline, you will support more emphasis on energy efficiency and renewable energy, and modernization of Ohio's electricity infrastructure, and that you will require FirstEnergy to develop and implement plans for the communities where the retiring plants are located.

Sincerely,

Subject: FirstEnergy should focus on clean energy in wake of retirements!
Date: Friday, July 22, 2016 9:07:28 PM

Dear PUCO,

I was pleased to hear FirstEnergy announce it plans to retire 901 MWs of aging dirty coal generation at the W.H. Sammis and Bay Shore power plants. These units put out millions of tons of CO2 and tens of millions of pounds of SO2 and NOx each year leading Ohio to have some of the dirtiest air in the United States and contributing to significant environmental issues.

Retiring these units will lead to significant health and environmental benefits for the communities near these plants and all of those downwind. At the same time, it is imperative FirstEnergy provide plans and assistance for the communities in which these plants are located.

As FirstEnergy financially benefited for decades from these plants, and Ohioans consumed their power, the communities where these plants were located faced disproportionate adverse health impacts. It is FirstEnergy's responsibility to ensure the members of these communities do not now faced additional economic backlash as these plants no longer make financial sense and move towards retirement.

Retirement of old dirty generation is welcome news. It is my hope as this generation comes offline, you will support more emphasis on energy efficiency and renewable energy, and modernization of Ohio's electricity infrastructure, and that you will require FirstEnergy to develop and implement plans for the communities where the retiring plants are located.

We moved to Ohio almost six years ago and I then realized that Ohio was not as progressive as I had expected on preparing for clean energy. However, now I am so happy and proud that Ohio is making the progress that I expected from this state. Please also provide leadership in helping the workers in the coal industry that will lose their livelihoods. Change is difficult and hopefully, Ohio can lead in safeguarding former coal energy workers from loss of income and lack of work skills for life without depending on coal. By setting aside dependence on coal, Ohio is providing itself with a healthier future and hopes of preventing climate change. Thank you!

Retiring these units will lead to significant health and environmental benefits for the communities near these plants and all of those downwind. At the same time, it is imperative FirstEnergy provide plans and assistance for the communities in which these plants are located.

As FirstEnergy financially benefited for decades from these plants, and Ohioans consumed their power, the communities where these plants were located faced disproportionate adverse health impacts. It is FirstEnergy's responsibility to ensure the members of these communities do not now faced additional economic backlash as these plants no longer make financial sense and move towards retirement.

Retirement of old dirty generation is welcome news. It is my hope as this generation comes offline, you will support more emphasis on energy efficiency and renewable energy, and modernization of Ohio's electricity infrastructure, and that you will require FirstEnergy to develop and implement plans for the communities where the retiring plants are located.

Sincerely,

Joan Lang

Dear PUCO,

I was pleased to hear FirstEnergy announce it plans to retire 901 MWs of aging dirty coal generation at the W.H. Sammis and Bay Shore power plants. These units put out millions of tons of CO2 and tens of millions of pounds of SO2 and NOx each year leading Ohio to have some of the dirtiest air in the United States and contributing to significant environmental issues.

Retiring these units will lead to significant health and environmental benefits for the communities near these plants and all of those downwind. At the same time, it is imperative FirstEnergy provide plans and assistance for the communities in which these plants are located.

As FirstEnergy financially benefited for decades from these plants, and Ohioans consumed their power, the communities where these plants were located faced disproportionate adverse health impacts. These units put out millions of tons of CO2 and tens of millions of pounds of SO2 and NOx each year leading Ohio to have some of the dirtiest air in the United States and contributing to significant environmental issues.

I am sick and tired of seeing people in the Ohio Valley die from diseases related to the burning of dirty coal. There are cleaner alternatives and you should be a part of the fight for the planet instead of more pollution for profit's sake.

Retiring these units will lead to significant health and environmental benefits for the communities near these plants and all of those downwind. At the same time, it is imperative FirstEnergy provide plans and assistance for the communities in which these plants are located.

As FirstEnergy financially benefited for decades from these plants, and Ohioans consumed their power, the communities where these plants were located faced disproportionate adverse health impacts. It is FirstEnergy's responsibility to ensure the members of these communities do not now faced additional economic backlash as these plants no longer make financial sense and move towards retirement.

Retirement of old dirty generation is welcome news. It is my hope as this generation comes offline, you will support more emphasis on energy efficiency and renewable energy, and modernization of Ohio's electricity infrastructure, and that you will require FirstEnergy to develop and implement plans for the communities where the retiring plants are located.

Date: Friday, July 22, 2016 7:40:20 PM

Dear PUCO,

I was pleased to hear FirstEnergy announce it plans to retire 901 MWs of aging dirty coal generation at the W.H. Sammis and Bay Shore power plants. These units put out millions of tons of CO2 and tens of millions of pounds of SO2 and NOx each year leading Ohio to have some of the dirtiest air in the United States and contributing to significant environmental issues.

Retiring these units will lead to significant health and environmental benefits for the communities near these plants and all of those downwind. At the same time, it is imperative FirstEnergy provide plans and assistance for the communities in which these plants are located.

As FirstEnergy financially benefited for decades from these plants, and Ohioans consumed their power, the communities where these plants were located faced disproportionate adverse health impacts. It is FirstEnergy's responsibility to ensure the members of these communities do not now faced additional economic backlash as these plants no longer make financial sense and move towards retirement.

Retirement of old dirty generation is welcome news. It is my hope as this generation comes offline, you will support more emphasis on energy efficiency and renewable energy, and modernization of Ohio's electricity infrastructure, and that you will require FirstEnergy to develop and implement plans for the communities where the retiring plants are located.

Subject: FirstEnergy should focus on clean energy in wake of retirements!
Date: Friday, July 22, 2016 7:18:02 PM

Dear PUCO,

I was pleased to hear FirstEnergy announce it plans to retire 901 MWs of aging dirty coal generation at the W.H. Sammis and Bay Shore power plants. These units put out millions of tons of CO₂ and tens of millions of pounds of SO₂ and NO_x each year leading Ohio to have some of the dirtiest air in the United States and contributing to significant environmental issues.

Retiring these units will lead to significant health and environmental benefits for the communities near these plants and all of those downwind. At the same time, it is imperative FirstEnergy provide plans and assistance for the communities in which these plants are located.

As FirstEnergy financially benefited for decades from these plants, and Ohioans consumed their power, the communities where these plants were located faced disproportionate adverse health impacts. It is FirstEnergy's responsibility to ensure the members of these communities do not now face additional economic backlash as these plants no longer make financial sense and move towards retirement.

Retirement of old dirty generation is welcome news. It is my hope as this generation comes offline, you will support more emphasis on energy efficiency and renewable energy, and modernization of Ohio's electricity infrastructure, and that you will require FirstEnergy to develop and implement plans for the communities where the retiring plants are located.

Sincerely,

Claire Farnsworth

I was pleased to hear FirstEnergy announce it plans to retire 901 MWs of aging dirty coal generation at the W.H. Sammis and Bay Shore power plants. These units put out millions of tons of CO2 and tens of millions of pounds of SO2 and NOx each year leading Ohio to have some of the dirtiest air in the United States and contributing to significant environmental issues.

Retiring these units will lead to significant health and environmental benefits for the communities near these plants and all of those downwind. At the same time, it is imperative FirstEnergy provide plans and assistance for the communities in which these plants are located.

As FirstEnergy financially benefited for decades from these plants, and Ohioans consumed their power, the communities where these plants were located faced disproportionate adverse health impacts. It is FirstEnergy's responsibility to ensure the members of these communities do not now faced additional economic backlash as these plants no longer make financial sense and move towards retirement.

Retirement of old dirty generation is welcome news. It is my hope as this generation comes offline, you will support more emphasis on energy efficiency and renewable energy, and modernization of Ohio's electricity infrastructure, and that you will require FirstEnergy to develop and implement plans for the communities where the retiring plants are located.

Sincerely,

Mary Starzyk

As FirstEnergy financially benefited for decades from these plants, and Ohioans consumed their power, the communities where these plants were located faced disproportionate adverse health impacts. It is FirstEnergy's responsibility to ensure the members of these communities do not now faced additional economic backlash as these plants no longer make financial sense and move towards retirement.

Retirement of old dirty generation is welcome news. It is my hope as this generation comes offline, you will support more emphasis on energy efficiency and renewable energy, and modernization of Ohio's electricity infrastructure, and that you will require FirstEnergy to develop and implement plans for the communities where the retiring plants are located.

Sincerely,

Dear PUCO,

I was pleased to hear FirstEnergy announce it plans to retire 901 MWs of aging dirty coal generation at the W.H. Sammis and Bay Shore power plants. These units put out millions of tons of CO₂ and tens of millions of pounds of SO₂ and NO_x each year leading Ohio to have some of the dirtiest air in the United States and contributing to significant environmental issues.

Retiring these units will lead to significant health and environmental benefits for the communities near these plants and all of those downwind. At the same time, it is imperative FirstEnergy provide plans and assistance for the communities in which these plants are located.

As FirstEnergy financially benefited for decades from these plants, and Ohioans consumed their power, the communities where these plants were located faced disproportionate adverse health impacts. It is FirstEnergy's responsibility to ensure the members of these communities do not now faced additional economic backlash as these plants no longer make financial sense and move towards retirement.

Retirement of old dirty generation is welcome news. It is my hope as this generation comes offline, you will support more emphasis on energy efficiency and renewable energy, and modernization of Ohio's electricity infrastructure, and that you will require FirstEnergy to develop and implement plans for the communities where the retiring plants are located.

Thank you for your continued attention to retiring these obsolete coal burning plants and for helping the members of their communities to train for and acquire new equally economically feasible jobs to support their lives.

Sincerely,

Jane Toth

Subject: FirstEnergy should focus on clean energy in wake of retirements!
Date: Friday, July 22, 2016 6:02:27 PM

Dear PUCO,

I was pleased to hear FirstEnergy announce it plans to retire 901 MWs of aging dirty coal generation at the W.H. Sammis and Bay Shore power plants. These units put out millions of tons of CO2 and tens of millions of pounds of SO2 and NOx each year leading Ohio to have some of the dirtiest air in the United States and contributing to significant environmental issues.

Retiring these units will lead to significant health and environmental benefits for the communities near these plants and all of those downwind. At the same time, it is imperative FirstEnergy provide plans and assistance for the communities in which these plants are located.

As FirstEnergy financially benefited for decades from these plants, and Ohioans consumed their power, the communities where these plants were located faced disproportionate adverse health impacts. It is FirstEnergy's responsibility to ensure the members of these communities do not now faced additional economic backlash as these plants no longer make financial sense and move towards retirement.

Retirement of old dirty generation is welcome news. It is my hope as this generation comes offline, you will support more emphasis on energy efficiency and renewable energy, and modernization of Ohio's electricity infrastructure, and that you will require FirstEnergy to develop and implement plans for the communities where the retiring plants are located.

Sincerely,

Jeffrey McCollim

I am happy to hear of the plans for cleaner air in Ohio! I have been diagnosed with asthma and am on several medications to help me cope with it. My husband and I moved to south east Ohio from Washington State in 1997 and I started having asthma symptoms a few years later. My sister-in-law has lived here all her adult life and is suffering from lung issues these past several years and still has not been diagnosed. She has been through numerous testing procedures and medications. We are hoping Ohio's cleaner air will help our breathing issues!

Date: Friday, July 22, 2016 5:42:22 PM

Dear PUCO,

I was pleased to hear FirstEnergy announce it plans to retire 901 MWs of aging dirty coal generation at the W.H. Sammis and Bay Shore power plants. These units put out millions of tons of CO2 and tens of millions of pounds of SO2 and NOx each year leading Ohio to have some of the dirtiest air in the United States and contributing to significant environmental issues.

Retiring these units will lead to significant health and environmental benefits for the communities near these plants and all of those downwind. At the same time, it is imperative FirstEnergy provide plans and assistance for the communities in which these plants are located.

As FirstEnergy financially benefited for decades from these plants, and Ohioans consumed their power, the communities where these plants were located faced disproportionate adverse health impacts. It is FirstEnergy's responsibility to ensure the members of these communities do not now faced additional economic backlash as these plants no longer make financial sense and move towards retirement.

Retirement of old dirty generation is welcome news. It is my hope as this generation comes offline, you will support more emphasis on energy efficiency and renewable energy, and modernization of Ohio's electricity infrastructure, and that you will require FirstEnergy to develop and implement plans for the communities where the retiring plants are located.

Sincerely,

Janet Dubas

I was pleased to hear FirstEnergy announce it plans to retire 901 MWs of aging dirty coal generation at the W.H. Sammis and Bay Shore power plants. These units put out millions of tons of CO2 and tens of millions of pounds of SO2 and NOx each year leading Ohio to have some of the dirtiest air in the United States and contributing to significant environmental issues.

Retiring these units will lead to significant health and environmental benefits for the communities near these plants and all of those downwind. At the same time, it is imperative FirstEnergy provide plans and assistance for the communities in which these plants are located.

As FirstEnergy financially benefited for decades from these plants, and Ohioans consumed their power, the communities where these plants were located faced disproportionate adverse health impacts. It is FirstEnergy's responsibility to ensure the members of these communities do not now faced additional economic backlash as these plants no longer make financial sense and move towards retirement.

Retirement of old dirty generation is welcome news. It is my hope as this generation comes offline, you will support more emphasis on energy efficiency and renewable energy, and modernization of Ohio's electricity infrastructure, and that you will require FirstEnergy to develop and implement plans for the communities where the retiring plants are located.

Sincerely,

Pat Fair

As FirstEnergy financially benefited for decades from these plants, and Ohioans consumed their power, the communities where these plants were located faced disproportionate adverse health impacts. It is FirstEnergy's responsibility to ensure the members of these communities do not now faced additional economic backlash as these plants no longer make financial sense and move towards retirement.

Retirement of old dirty generation is welcome news. It is my hope as this generation comes offline, you will support more emphasis on energy efficiency and renewable energy, and modernization of Ohio's electricity infrastructure, and that you will require FirstEnergy to develop and implement plans for the communities where the retiring plants are located.

Sincerely,

Rosemary Rogers

Dear PUCO,

I was pleased to hear FirstEnergy announce it plans to retire 901 MWs of aging dirty coal generation at the W.H. Sammis and Bay Shore power plants. These units put out millions of tons of CO2 and tens of millions of pounds of SO2 and NOx each year leading Ohio to have some of the dirtiest air in the United States and contributing to significant environmental issues.

Retiring these units will lead to significant health and environmental benefits for the communities near these plants and all of those downwind. At the same time, it is imperative FirstEnergy provide plans and assistance for the communities in which these plants are located.

As FirstEnergy financially benefited for decades from these plants, and Ohioans consumed their power, the communities where these plants were located faced disproportionate adverse health impacts. It is FirstEnergy's responsibility to ensure the members of these communities do not now faced additional economic backlash as these plants no longer make financial sense and move towards retirement.

Date: Friday, July 22, 2016 5:13:30 PM

Dear PUCO,

I was pleased to hear FirstEnergy announce it plans to retire 901 MWs of aging dirty coal generation at the W.H. Sammis and Bay Shore power plants. These units put out millions of tons of CO2 and tens of millions of pounds of SO2 and NOx each year leading Ohio to have some of the dirtiest air in the United States and contributing to significant environmental issues.

Retiring these units will lead to significant health and environmental benefits for the communities near these plants and all of those downwind. At the same time, it is imperative FirstEnergy provide plans and assistance for the communities in which these plants are located.

As FirstEnergy financially benefited for decades from these plants, and Ohioans consumed their power, the communities where these plants were located faced disproportionate adverse health impacts. It is FirstEnergy's responsibility to ensure the members of these communities do not now faced additional economic backlash as these plants no longer make financial sense and move towards retirement.

Retirement of old dirty generation is welcome news. It is my hope as this generation comes offline, you will support more emphasis on energy efficiency and renewable energy, and modernization of Ohio's electricity infrastructure, and that you will require FirstEnergy to develop and implement plans for the communities where the retiring plants are located.

Sincerely,

Henry and Alice Gosztyla

Retiring these units will lead to significant health and environmental benefits for the communities near these plants and all of those downwind. At the same time, it is imperative FirstEnergy provide plans and assistance for the communities in which these plants are located.

As FirstEnergy financially benefited for decades from these plants, and Ohioans consumed their power, the communities where these plants were located faced disproportionate adverse health impacts. It is FirstEnergy's responsibility to ensure the members of these communities do not now faced additional economic backlash as these plants no longer make financial sense and move towards retirement.

Retirement of old dirty generation is welcome news. It is my hope as this generation comes offline, you will support more emphasis on energy efficiency and renewable energy, and modernization of Ohio's electricity infrastructure, and that you will require FirstEnergy to develop and implement plans for the communities where the retiring plants are located.

Sincerely,

Brian Kuru

Dear PUCO,

I was pleased to hear FirstEnergy announce it plans to retire 901 MWs of aging dirty coal generation at the W.H. Sammis and Bay Shore power plants. These units put out millions of tons of CO2 and tens of millions of pounds of SO2 and NOx each year leading Ohio to have some of the dirtiest air in the United States and contributing to significant environmental issues.

Retiring these units will lead to significant health and environmental benefits for the communities near these plants and all of those downwind. At the same time, it is imperative FirstEnergy provide plans and assistance for the communities in which these plants are located.

Subject: FirstEnergy should focus on clean energy in wake of retirements!
Date: Friday, July 22, 2016 5:02:52 PM

Dear PUCO,

I was pleased to hear FirstEnergy announce it plans to retire 901 MWs of aging dirty coal generation at the W.H. Sammis and Bay Shore power plants. These units put out millions of tons of CO2 and tens of millions of pounds of SO2 and NOx each year leading Ohio to have some of the dirtiest air in the United States and contributing to significant environmental issues.

Retiring these units will lead to significant health and environmental benefits for the communities near these plants and all of those downwind. At the same time, it is imperative FirstEnergy provide plans and assistance for the communities in which these plants are located.

As FirstEnergy financially benefited for decades from these plants, and Ohioans consumed their power, the communities where these plants were located faced disproportionate adverse health impacts. It is FirstEnergy's responsibility to ensure the members of these communities do not now faced additional economic backlash as these plants no longer make financial sense and move towards retirement.

Retirement of old dirty generation is welcome news. It is my hope as this generation comes offline, you will support more emphasis on energy efficiency and renewable energy, and modernization of Ohio's electricity infrastructure, and that you will require FirstEnergy to develop and implement plans for the communities where the retiring plants are located.

Sincerely,

Ali Boraby

I was pleased to hear FirstEnergy announce it plans to retire 901 MWs of aging dirty coal generation at the W.H. Sammis and Bay Shore power plants. These units put out millions of tons of CO2 and tens of millions of pounds of SO2 and NOx each year leading Ohio to have some of the dirtiest air in the United States and contributing to significant environmental issues.

Retiring these units will lead to significant health and environmental benefits for the communities near these plants and all of those downwind. At the same time, it is imperative FirstEnergy provide plans and assistance for the communities in which these plants are located.

As FirstEnergy financially benefited for decades from these plants, and Ohioans consumed their power, the communities where these plants were located faced disproportionate adverse health impacts. It is FirstEnergy's responsibility to ensure the members of these communities do not now faced additional economic backlash as these plants no longer make financial sense and move towards retirement.

Retirement of old dirty generation is welcome news. It is my hope as this generation comes offline, you will support more emphasis on energy efficiency and renewable energy, and modernization of Ohio's electricity infrastructure, and that you will require FirstEnergy to develop and implement plans for the communities where the retiring plants are located.

Sincerely,

Gordon Holm

It is FirstEnergy's responsibility to ensure the members of these communities do not now faced additional economic backlash as these plants no longer make financial sense and move towards retirement.

Retirement of old dirty generation is welcome news. It is my hope as this generation comes offline, you will support more emphasis on energy efficiency and renewable energy, and modernization of Ohio's electricity infrastructure, and that you will require FirstEnergy to develop and implement plans for the communities where the retiring plants are located.

Date: Friday, July 22, 2016 4:51:16 PM

Dear PUCO,

I was pleased to hear FirstEnergy announce it plans to retire 901 MWs of aging dirty coal generation at the W.H. Sammis and Bay Shore power plants. These units put out millions of tons of CO2 and tens of millions of pounds of SO2 and NOx each year leading Ohio to have some of the dirtiest air in the United States and contributing to significant environmental issues.

Retiring these units will lead to significant health and environmental benefits for the communities near these plants and all of those downwind. At the same time, it is imperative FirstEnergy provide plans and assistance for the communities in which these plants are located.

As FirstEnergy financially benefited for decades from these plants, and Ohioans consumed their power, the communities where these plants were located faced disproportionate adverse health impacts. It is FirstEnergy's responsibility to ensure the members of these communities do not now faced additional economic backlash as these plants no longer make financial sense and move towards retirement.

Retirement of old dirty generation is welcome news. It is my hope as this generation comes offline, you will support more emphasis on energy efficiency and renewable energy, and modernization of Ohio's electricity infrastructure, and that you will require FirstEnergy to develop and implement plans for the communities where the retiring plants are located.

Date: Friday, July 22, 2016 4:45:28 PM

Dear PUCO,

I was pleased to hear FirstEnergy announce it plans to retire 901 MWs of aging dirty coal generation at the W.H. Sammis and Bay Shore power plants. These units put out millions of tons of CO2 and tens of millions of pounds of SO2 and NOx each year leading Ohio to have some of the dirtiest air in the United States and contributing to significant environmental issues.

Retiring these units will lead to significant health and environmental benefits for the communities near these plants and all of those downwind. At the same time, it is imperative FirstEnergy provide plans and assistance for the communities in which these plants are located.

As FirstEnergy financially benefited for decades from these plants, and Ohioans consumed their power, the communities where these plants were located faced disproportionate adverse health impacts. It is FirstEnergy's responsibility to ensure the members of these communities do not now faced additional economic backlash as these plants no longer make financial sense and move towards retirement.

Retirement of old dirty generation is welcome news. It is my hope as this generation comes offline, you will support more emphasis on energy efficiency and renewable energy, and modernization of Ohio's electricity infrastructure, and that you will require FirstEnergy to develop and implement plans for the communities where the retiring plants are located.

Sincerely,

Jeffrey Dean

Retiring these units will lead to significant health and environmental benefits for the communities near these plants and all of those downwind. At the same time, it is imperative FirstEnergy provide plans and assistance for the communities in which these plants are located.

As FirstEnergy financially benefited for decades from these plants, and Ohioans consumed their power, the communities where these plants were located faced disproportionate adverse health impacts. It is FirstEnergy's responsibility to ensure the members of these communities do not now faced additional economic backlash as these plants no longer make financial sense and move towards retirement.

Retirement of old dirty generation is welcome news. It is my hope as this generation comes offline, you will support more emphasis on energy efficiency and renewable energy, and modernization of Ohio's electricity infrastructure, and that you will require FirstEnergy to develop and implement plans for the communities where the retiring plants are located.

Sincerely,

Richard Hall

Dear PUCO,

I was pleased to hear FirstEnergy announce it plans to retire 901 MWs of aging dirty coal generation at the W.H. Sammis and Bay Shore power plants. These units put out millions of tons of CO2 and tens of millions of pounds of SO2 and NOx each year leading Ohio to have some of the dirtiest air in the United States and contributing to significant environmental issues.

Retiring these units will lead to significant health and environmental benefits for the communities near these plants and all of those downwind. At the same time, it is imperative FirstEnergy provide plans and assistance for the communities in which these plants are located.

As FirstEnergy financially benefited for decades from these plants, and Ohioans consumed their power, the communities where these plants were located faced disproportionate adverse health impacts. It is FirstEnergy's responsibility to ensure the members of these communities do not now faced additional economic backlash as these plants no longer make financial sense and move towards retirement.
