Case #13-2385-ESP4  
#16-1852-EL-550

To Whom It May Concern,

Doubling my charges is not a fair tactic.  
In order to preserve the Earth for future generations,  
in addition to the years I have left here,  
renewable energy and efficiency programs  
need to be explored. Pollution as a side  
effect is not acceptable!

Sincerely,

Mary Carter

Case # 16-1852-EL-SSO  
13-2385-ESP

Dear AEP,

I'm opposed to AEP's  
plan to double customer  
charge

Regarding AEP Case Number 13-2385 EL-SSO/16-1852-EL-SSO

January 4, 2017

To AEP, Public Utilities Commission of Ohio,

I am opposed to AEP's plan to increase residential fixed fees.  
AEP should be targeting improvements in energy efficiency, reductions in user demand and increases in the use of renewable energy.

New technologies continue are being developed and existing technologies continue to be improved both in the US and around the globe. AEP should be leading, supporting and participating in these efforts to modernize the grid. Technologies available today include micro-grids, distributed energy storage (batteries) as well as renewable sources such as wind and solar.

Improve efficiency, reduce use and waste and use renewables, otherwise a time will come when "easy" rate increases will not pass, and by that time it will be too late and too costly to modernize electrical power generation facilities and distribution networks. All Ohioans will then have to decide: pay even more outrageous electricity costs or look to outsourcing electricity from nearby states that took the steps to become leaders in the industry.

RE Case # 13-2385-ESP  
16-1852-EL-SSO

To Whom it may concern:

I am writing to share my opposition to AEP's plan to more than double customer charges. AEP should be promoting energy efficiency rather than punishing customers who reduce their use.

Renewable energy and energy efficient programs should be a priority for AEP since increasing these will benefit all!

Sincerely,

Deborah A. Morgan
