CASE NO. 116-2443 MAIL: BGN

Harold E. Moore, 11152 Seneca Lane byesville oh 43723 740-241-0411

Wynette J Moore 11150 Seneca Lane byesville oh 43723 740-255-3883

Whom Are opposed to The Guernsey Power station we are the effected property owners whos property is contiguous to the planned project. 2 homes are on this property and 2 Seperate Families Residing Family owned Since 1975, Approximately 39,063 Residents in 2016, There was A very Poor Job of releasing the Coming of Guernsey Power Station to the public and Citizens, a very big Concern is This being Such a huge Power Plant For Such a small Town, to endure and handle the resources it will take to maintain the plant, water is one of the advantages of buying a home. and our Lands best Resource, has tested as being as pure as Spring water, with having small children once a year testing has proved to be one of this Families major health benefits, once the Power station is built its a given our water will be contaminated with underground chemicals and pollutants, and that can be very dangerous to both in several studies have been proven, it can be much more toxic being absorbed into the skin, one persons health is worth every thing, our Local School being with in 2 1/2 to 3 miles

From the project will effect our youth wich is our Future. This means heavy Pollution For our children.

another great Concern is The roadway that will have to be widened, Shield Alloy graveled the Roadway with a radioactive material, when the top is Removed it may stir up the material and Cause harmful pollutants in the Air For us to breath.

These Short terms Jobs may pay well, but they involve Long hours and are very health hazardous. Our new Factory had 2000 workers For assembly Jobs. These Jobs Take much less space, unlike the Power Plant taking up a huge space and employing less people. There are much Safer approaches. For energy, water Quality Reports were given out Monthly in guernsey County For the bixville water. testing not good. we built a new water plant to be able to Supply guernsey Power Station. Life long citizens are reporting this will be a great failure, and quality is still reporting Poor. Seneca Lake is a big Concern For citizens, a large attraction For guernsey County, 2017 This Lake has built a huge obstacle Course For our children to Swim, Camp and enjoy outdoor healthy living. people Drive From Far Away to this attraction. For Summer stays, Lakes and Rivers stay pretty low. in this Area, and will soon dry up

From the abundance of water the plant will need. I am in great fear our small community is headed for hard times and a great disaster. with such a huge project. There are many many concerns our family and citizens have and have not had the chance or time to come fourth. Because of the publication and lack of hearing about the project. The Daily Jeffersonian is a small town newspaper not many people even buy and radio announcements have been few. in closing I would like to add. that I thank Mike and Mary King for introducing themselves to our families and saying they would like to be good neighbors. I am a firm believer when people are given the truth they can be depended upon. The billions of dollars spoke about to be a good thing for our small community could very well be the ruination of our city and everything we have already built upon. I would also like to thank the Gversay Power Station and Mike and Mary King, for the Confidential document they offered to us. in calculating the costs of given a chance to leave our so loved home would not come close to be able to relocate 2 families or one and replace our water. we have had an unanswered Email. and at least a dozen questions unanswered no response.

which left us with the bond of trust broken,
I would like to thank everyone on this Ohio
Sitting board for hearing us out and our concerns
for our community, we are just a small
community with huge hearts and not lovers of
money. But lovers of our people and citizens
of our community our elder our children, as any
normal human being would be, and absolutely with
no doubt they could promise making our community
a better place and we would be in a safe environment
we would not oppose the project. I pray there is
a ~~before~~ ~~before~~ the right decision is made for
our community.

Thank you

Howard E. Moore

Janine Moore

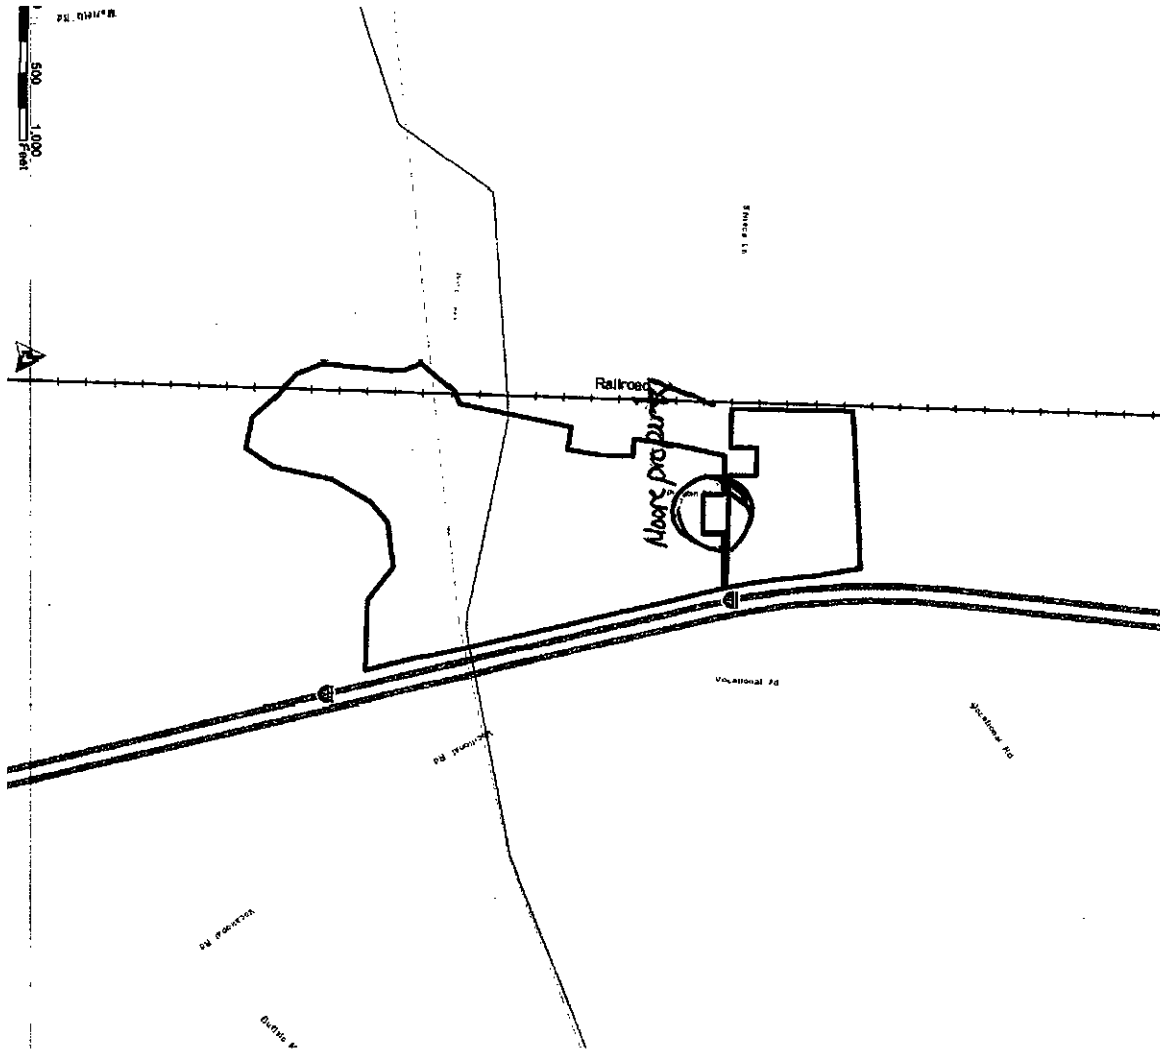

methane gas as being an underground
mine, is another great concern. being
aware of the dangers that can occur in
the process, and Green house gas

1 Review

Storms of my Grandchildren

by Mr. Bob, Phoenix, Arizona on 05-10-2010

Director of Goddard Space Flight, Dr Jim Hansen is well known in environmental circles as one who speaks out and has kept his job. He carefully weaves the basics as good as Tim Flannery, reviewing his involvement since 1980's on capital hill. Why was the phrase in NASA's mission statement, "... protect the home planet" deleted.. and the atmospheric aerosols study quashed? I was also surprised of the potential of next generation FAST nuclear reactor's that consume the long half life waste leaving material that decays in decades, and unusable for bomb proliferation. This book get's better and better, shockingly so in "350ppm", and "honest path", and the "Venous syndrome". It is incomprehensible that CO2 is increasing by a factor of 10 times faster than at any time in earth's history far outstripping the ability to compensate. Read it, live it, speak out about it, or write an eulogy to your grandchildren, that "business as usual" equals a dead planet.

Contents Part I: Coming to climate. Going after Goliath ; PlaNYC -- Part II: What it is and why it matters. The science ; The stakes -- Part III: Coal to clean energy. Coal's toll ; Green power -- Part IV: Green living. Where we live ; How we eat -- Part V: Travel directions. Cities take the wheel ; Oil's twilight -- Part VI: Cool capitalism. What we make ; How we invest -- Part VII: Adapting to change. A resilient world ; New normal -- Conclusion. The way forward

Summary "In 2006, the documentary An Inconvenient Truth set off a heated political debate when it threatened that inaction on climate change would lead to a dark and frightening future by 2016. Well, that ten year window has closed--and we have neither resolved the threats to our climate, nor gone past the point of no return. To Mayor Bloomberg and Carl Pope, it's clear that to treat climate change as either a lost cause or a non-issue is the wrong approach. Global leaders are stymied by the enormity of the doom-and-gloom scenarios. So what happens when you tell leaders that they can definitely--right now, this year--reduce the number of children who have asthma attacks, save thousands of Americans from dying of respiratory disease, cut energy bills, increase the security of our energy supply, make it easier for everyone to get around town, increase the number of jobs in their community--all while increasing the long-term stability of the global climate? That is actionable. That future is within our grasp. The changing climate should be seen as a series of discreet, manageable problems that should be attacked from all angles, each with a solution that can make our society healthier and our economy stronger. In these times, when it's less and less clear if the federal government will be willing to tackle climate change, Bloomberg and Pope lay out a powerfully persuasive argument about how cities can play an outsized role in fighting and reversing the dangerous effects of a warming planet. Together they lay out the economic and personal health reasons for businesses and individual citizens to support climate change action plans"-- Provided by publisher.
