To the Board: I am a landowner in Seneca County and very much in favor of wind turbines.

I believe the Anti-Wind group have lost their focus on what needs to be addressed. We need the cleanest energy possible. And that I believe is wind and solar.

There have been untrue rumors on facebook posted by people. For example: life flight will not be able to land among wind turbines. They are too noisy, shadow flicker etc.

The focus should be on our carbon increase. I read Popular Science magazine and on page 79 of the "Summer 2018" issue the scientists and agronomists agree carbon emissions are causing plants to contain more starches & sugars. Thus the nutrients such as minerals and proteins are less and less.

An article in "Ohio Country Journal" on page 14 also highlights this same information.

This is to certify that the images appearing are a accurate and complete reproduction of a case file document delivered in the regular course of business.

Please keep the focus on the cleaner wind energy. The demand is growing for electricity; that we can agree on.

A many generation  
on the farm farmer,
