Acknowledgments

I would like to take a moment to acknowledge the thought leaders who made this book possible. Those recognized here have either increased my and my teams' understanding of the smart grid generally, or made specific improvements to the book with their reviews, or both.

I would like to thank my team's first smart grid evaluation client, Xcel Energy, and wise leaders such as Randy Huston, Lynn Worrell, and Radim "Dino" Jurca and their teams. Without their support, integrity, and true interest in lessons learned, a comprehensive and unbiased evaluation would not have been possible. And while one smart grid evaluation engagement may be an aberration, two is a trend. For this reason I'd like to thank Dan Johnson and his team at the Public Utilities Commission of Ohio, including Greg Scheck, Jim Schweitzer, and Tim Benedict. I trust the confidence you placed in my team was well rewarded, and we heartily applaud your efforts to maximize smart grid benefits for Ohio citizens.

I would also like to thank Mark Wyatt, Tal Owen, Kevin Spainhour, Dan Phillips, Don Schneider, Justin Brown, Daniel Woodall, and Mark Wimberly and their teams at Duke Energy. My teams have worked with many utilities over the years, but the professionalism, focus, and integrity of every Duke Energy employee with whom we've ever worked have been truly exceptional. I have a similar respect for Eric Ackerman, Director of Alternative Regulation, and his colleagues at the Edison Electric Institute. I believe investor-owned utilities are fortunate to have people such as Eric and his associates working on their behalves.

As unbiased evaluators my teams and I reserve places in our hearts for both supporters and skeptics of the smart grid, as we have learned much from each. One of these friends is Patty Durand, executive director of the Smart Grid Consumer Collaborative, whose organization is identifying and dis-
