**Date:** Wednesday, October 03, 2018 10:28:49 AM

---

Dear Ohio Power Siting Board OPSB,

Dear Chairman Haque and members of the Ohio Power Siting Board,

As an Ohioan, I care deeply about how we generate energy for our state because the type of energy we choose to generate has a direct impact on me and my family's health, and on the overall well-being of our environment. That is why I ask you to approve the Joint Stipulation and Recommendation signed by Icebreaker, the Ohio Environmental Council, Sierra Club, the Business Network for Offshore Wind, and the Indiana/Kentucky/Ohio Regional Council of Carpenters.

Project Icebreaker is an innovative effort to provide Ohio with more clean energy and reduce our heavy reliance on fossil fuels. Approximately 60% of Ohio's power comes from coal, and Project Icebreaker will bring an emission-free source of power to Ohio's energy portfolio, reducing carbon dioxide and other harmful air pollution. While Project Icebreaker is only a small project, it must move forward in order to determine what possibilities exist for Ohio to become a leader in offshore wind, ensuring our children and grandchildren have clean air to breathe and a healthy lake, free from chemicals and pollutants resulting from continued use of fossil fuels.

Cuyahoga County's commitment to purchase electricity from Project Icebreaker not only transitions the community to clean energy sources, ensuring cleaner air for the most vulnerable populations, but will create new job opportunities across a region where they are desperately needed. The City of Cleveland also recently became the first city in Ohio, joining 80 other U.S. cities, in pledging to transition to 100% renewable power by 2050. Project Icebreaker will help them achieve that goal.

LEEDCo and Fred Olsen Renewables have carefully considered Ohio's need for clean energy sources to help combat air pollution and climate change with the need to protect Lake Erie's water, fisheries and migratory birds. The groups have done numerous studies to ensure the location of the turbines minimizes impacts on fish and wildlife, and Project Icebreaker has forged important partnerships with local universities and research firms to create a world class research center. The center will study the actual impacts of the six turbine offshore freshwater wind farm on fish, birds, and bats to deepen our knowledge to ensure any future development is done as safely as possible.

As an Ohioan, I appreciate the Board's thorough review of the Project Icebreaker proposal, and hope that the Board will strike the right balance between ensuring protection of our birds, bats, aquatic life and our precious Lake Erie, while ensuring this pilot project is able to move forward. The data and information this six turbine project will collect is vital to moving Ohio forward into a clean energy future.

Please approve the Joint Stipulation and Recommendation, and make Ohio a leader in innovative clean energy solutions!

Thank you.

Sincerely,  
Jane Toth  
4330 Tamalga Dr  
Cleveland, OH 44121

Dear Ohio Power Siting Board OPSB,

Dear Chairman Haque and members of the Ohio Power Siting Board,

As an Ohioan, I care deeply about how we generate energy for our state because the type of energy we choose to generate has a direct impact on me and my family's health, and on the overall well-being of our environment. That is why I ask you to approve the Joint Stipulation and Recommendation signed by Icebreaker, the Ohio Environmental Council, Sierra Club, the Business Network for Offshore Wind, and the Indiana/Kentucky/Ohio Regional Council of Carpenters.

Project Icebreaker is an innovative effort to provide Ohio with more clean energy and reduce our heavy reliance on fossil fuels. Approximately 60% of Ohio's power comes from coal, and Project Icebreaker will bring an emission-free source of power to Ohio's energy portfolio, reducing carbon dioxide and other harmful air pollution. While Project Icebreaker is only a small project, it must move forward in order to determine what possibilities exist for Ohio to become a leader in offshore wind, ensuring our children and grandchildren have clean air to breathe and a healthy lake, free from chemicals and pollutants resulting from continued use of fossil fuels.

Cuyahoga County's commitment to purchase electricity from Project Icebreaker not only transitions the community to clean energy sources, ensuring cleaner air for the most vulnerable populations, but will create new job opportunities across a region where they are desperately needed.

LEEDCo and Fred Olsen Renewables have carefully considered Ohio's need for clean energy sources to help combat air pollution and climate change with the need to protect Lake Erie's water, fisheries and migratory birds. The groups have done numerous studies to ensure the location of the turbines minimizes impacts on fish and wildlife, and Project Icebreaker has forged important partnerships with local universities and research firms to create a world class research center. The center will study the actual impacts of the six turbine offshore freshwater wind farm on fish, birds, and bats to deepen our knowledge to ensure any future development is done as safely as possible.

I appreciate the Board's thorough review of the Project Icebreaker proposal, and hope that the Board will strike the right balance between ensuring protection of our birds, bats, aquatic life and our precious Lake Erie, while ensuring this pilot project is able to move forward. The data and information this six turbine project will collect is vital to moving Ohio forward into a clean energy future.

Please approve the Joint Stipulation and Recommendation, and make Ohio a leader in innovative clean energy solutions!

Sincerely,  
Jason Kamalie

That is why I ask you to approve the Joint Stipulation and Recommendation signed by Icebreaker, the Ohio Environmental Council, Sierra Club, the Business Network for Offshore Wind, and the Indiana/Kentucky/Ohio Regional Council of Carpenters.

Project Icebreaker is an innovative effort to provide Ohio with more clean energy and reduce our heavy reliance on fossil fuels. Approximately 60% of Ohio's power comes from coal, and Project Icebreaker will bring an emission-free source of power to Ohio's energy portfolio, reducing carbon dioxide and other harmful air pollution. While Project Icebreaker is only a small project, it must move forward in order to determine what possibilities exist for Ohio to become a leader in offshore wind, ensuring our children and grandchildren have clean air to breathe and a healthy lake, free from chemicals and pollutants resulting from continued use of fossil fuels.

Cuyahoga County's commitment to purchase electricity from Project Icebreaker not only transitions the community to clean energy sources, ensuring cleaner air for the most vulnerable populations, but will create new job opportunities across a region where they are desperately needed. The City of Cleveland also recently became the first city in Ohio, joining 80 other U.S. cities, in pledging to transition to 100% renewable power by 2050. Project Icebreaker will help them achieve that goal.

LEEDCo and Fred Olsen Renewables have carefully considered Ohio's need for clean energy sources to help combat air pollution and climate change with the need to protect Lake Erie's water, fisheries and migratory birds. The groups have done numerous studies to ensure the location of the turbines minimizes impacts on fish and wildlife, and Project Icebreaker has forged important partnerships with local universities and research firms to create a world class research center. The center will study the actual impacts of the six turbine offshore freshwater wind farm on fish, birds, and bats to deepen our knowledge to ensure any future development is done as safely as possible.

As an Ohioan, I appreciate the Board's thorough review of the Project Icebreaker proposal, and hope that the Board will strike the right balance between ensuring protection of our birds, bats, aquatic life and our precious Lake Erie, while ensuring this pilot project is able to move forward. The data and information this six turbine project will collect is vital to moving Ohio forward into a clean energy future.

Please approve the Joint Stipulation and Recommendation, and make Ohio a leader in innovative clean energy solutions!

Sincerely,  
Alice Petersen  
4302 Foxglove Rd  
Toledo, OH 43623

Dear Ohio Power Siting Board OPSB,

Dear Chairman Haque and members of the Ohio Power Siting Board,

As an Ohioan, I care deeply about how we generate energy for our state because the type of energy we choose to generate has a direct impact on me and my family's health, and on the overall well-being of our environment. That is why I ask you to approve the Joint Stipulation and Recommendation signed by Icebreaker, the Ohio Environmental Council, Sierra Club, the Business Network for Offshore Wind, and the Indiana/Kentucky/Ohio Regional Council of Carpenters.

Project Icebreaker is an innovative effort to provide Ohio with more clean energy and reduce our heavy reliance on fossil fuels. Approximately 60% of Ohio's power comes from coal, and Project Icebreaker will bring an emission-free source of power to Ohio's energy portfolio, reducing carbon dioxide and other harmful air pollution. While Project Icebreaker is only a small project, it must move forward in order to determine what possibilities exist for Ohio to become a leader in offshore wind, ensuring our children and grandchildren have clean air to breathe and a healthy lake, free from chemicals and pollutants resulting from continued use of fossil fuels.

Cuyahoga County's commitment to purchase electricity from Project Icebreaker not only transitions the community to clean energy sources, ensuring cleaner air for the most vulnerable populations, but will create new job opportunities across a region where they are desperately needed. The City of Cleveland also recently became the first city in Ohio, joining 80 other U.S. cities, in pledging to transition to 100% renewable power by 2050. Project Icebreaker will help them achieve that goal.

LEEDCo and Fred Olsen Renewables have carefully considered Ohio's need for clean energy sources to help combat air pollution and climate change with the need to protect Lake Erie's water, fisheries and migratory birds. The groups have done numerous studies to ensure the location of the turbines minimizes impacts on fish and wildlife, and Project Icebreaker has forged important partnerships with local universities and research firms to create a world class research center. The center will study the actual impacts of the six turbine offshore freshwater wind farm on fish, birds, and bats to deepen our knowledge to ensure any future development is done as safely as possible.

As an Ohioan, I appreciate the Board's thorough review of the Project Icebreaker proposal, and hope that the Board will strike the right balance between ensuring protection of our birds, bats, aquatic life and our precious Lake Erie, while ensuring this pilot project is able to move forward. The data and information this six turbine project will collect is vital to moving Ohio forward into a clean energy future.

Please approve the Joint Stipulation and Recommendation, and make Ohio a leader in innovative clean energy solutions!

Sincerely,

Dear Ohio Power Siting Board OPSB,

Dear Chairman Haque and members of the Ohio Power Siting Board,

Every single American deserves clean air, clean water, and safe food as an inalienable right. This is the only planet we have. Once business has finished ravaging the land for a profit, we can't undo the damage. Stand up for the health of your children and grandchildren and let's leave a habitable place for our descendants instead of placating the rich and powerful. Clean and sustainable energy is the future! Let's not fall behind China, Germany, Europe, and other countries who are already ahead of us on this. I have solar on my rooftop, so I'm doing what I can. Let's lead the way in sustainable energy by installing wind turbines in Lake Erie.

As an Ohioan, I care deeply about how we generate energy for our state because the type of energy we choose to generate has a direct impact on me and my family's health, and on the overall well-being of our environment. That is why I ask you to approve the Joint Stipulation and Recommendation signed by Icebreaker, the Ohio Environmental Council, Sierra Club, the Business Network for Offshore Wind, and the Indiana/Kentucky/Ohio Regional Council of Carpenters.

Project Icebreaker is an innovative effort to provide Ohio with more clean energy and reduce our heavy reliance on fossil fuels. The center will study the actual impacts of the six turbine offshore freshwater wind farm on fish, birds, and bats to deepen our knowledge to ensure any future development is done as safely as possible.

As an Ohioan, I appreciate the Board's thorough review of the Project Icebreaker proposal, and hope that the Board will strike the right balance between ensuring protection of our birds, bats, aquatic life and our precious Lake Erie, while ensuring this pilot project is able to move forward. The data and information this six turbine project will collect is vital to moving Ohio forward into a clean energy future.

Please approve the Joint Stipulation and Recommendation, and make Ohio a leader in innovative clean energy solutions!

Sincerely,

Dear Ohio Power Siting Board OPSB,

Dear Chairman Haque and members of the Ohio Power Siting Board,

As an Ohioan, I care deeply about how we generate energy for our state because the type of energy we choose to generate has a direct impact on me and my family's health, and on the overall well-being of our environment. That is why I ask you to approve the Joint Stipulation and Recommendation signed by Icebreaker, the Ohio Environmental Council, Sierra Club, the Business Network for Offshore Wind, and the Indiana/Kentucky/Ohio Regional Council of Carpenters.

Project Icebreaker is an innovative effort to provide Ohio with more clean energy and reduce our heavy reliance on fossil fuels. Approximately 60% of Ohio's power comes from coal, and Project Icebreaker will bring an emission-free source of power to Ohio's energy portfolio, reducing carbon dioxide and other harmful air pollution. While Project Icebreaker is only a small project, it must move forward in order to determine what possibilities exist for Ohio to become a leader in offshore wind, ensuring our children and grandchildren have clean air to breathe and a healthy lake, free from chemicals and pollutants resulting from continued use of fossil fuels.

Cuyahoga County's commitment to purchase electricity from Project Icebreaker not only transitions the community to clean energy sources, ensuring cleaner air for the most vulnerable populations, but will create new job opportunities across a region where they are desperately needed. The City of Cleveland also recently became the first city in Ohio, joining 80 other U.S. cities, in pledging to transition to 100% renewable power by 2050. Project Icebreaker will help them achieve that goal.

LEEDCo and Fred Olsen Renewables have carefully considered Ohio's need for clean energy sources to help combat air pollution and climate change with the need to protect Lake Erie's water, fisheries and migratory birds. The groups have done numerous studies to ensure the location of the turbines minimizes impacts on fish and wildlife, and Project Icebreaker has forged important partnerships with local universities and research firms to create a world class research center. The center will study the actual impacts of the six turbine offshore freshwater wind farm on fish, birds, and bats to deepen our knowledge to ensure any future development is done as safely as possible.

As an Ohioan, I appreciate the Board's thorough review of the Project Icebreaker proposal, and hope that the Board will strike the right balance between ensuring protection of our birds, bats, aquatic life and our precious Lake Erie, while ensuring this pilot project is able to move forward. The data and information this six turbine project will collect is vital to moving Ohio forward into a clean energy future.

Please approve the Joint Stipulation and Recommendation, and make Ohio a leader in innovative clean energy solutions!

Sincerely,  
Nancy Dollard

Dear Ohio Power Siting Board OPSB,

Dear Chairman Haque and members of the Ohio Power Siting Board,

As an Ohioan, I care deeply about how we generate energy for our state because the type of energy we choose to generate has a direct impact on me and my family's health, and on the overall well-being of our environment. That is why I ask you to approve the Joint Stipulation and Recommendation signed by Icebreaker, the Ohio Environmental Council, Sierra Club, the Business Network for Offshore Wind, and the Indiana/Kentucky/Ohio Regional Council of Carpenters.

Project Icebreaker is an innovative effort to provide Ohio with more clean energy and reduce our heavy reliance on fossil fuels. Approximately 60% of Ohio's power comes from coal, and Project Icebreaker will bring an emission-free source of power to Ohio's energy portfolio, reducing carbon dioxide and other harmful air pollution. While Project Icebreaker is only a small project, it must move forward in order to determine what possibilities exist for Ohio to become a leader in offshore wind, ensuring our children and grandchildren have clean air to breathe and a healthy lake, free from chemicals and pollutants resulting from continued use of fossil fuels.

Cuyahoga County's commitment to purchase electricity from Project Icebreaker not only transitions the community to clean energy sources, ensuring cleaner air for the most vulnerable populations, but will create new job opportunities across a region where they are desperately needed. The City of Cleveland also recently became the first city in Ohio, joining 80 other U.S. cities, in pledging to transition to 100% renewable power by 2050. Project Icebreaker will help them achieve that goal.

LEEDCo and Fred Olsen Renewables have carefully considered Ohio's need for clean energy sources to help combat air pollution and climate change with the need to protect Lake Erie's water, fisheries and migratory birds. The groups have done numerous studies to ensure the location of the turbines minimizes impacts on fish and wildlife, and Project Icebreaker has forged important partnerships with local universities and research firms to create a world class research center. The center will study the actual impacts of the six turbine offshore freshwater wind farm on fish, birds, and bats to deepen our knowledge to ensure any future development is done as safely as possible.

As an Ohioan, I appreciate the Board's thorough review of the Project Icebreaker proposal, and hope that the Board will strike the right balance between ensuring protection of our birds, bats, aquatic life and our precious Lake Erie, while ensuring this pilot project is able to move forward. The data and information this six turbine project will collect is vital to moving Ohio forward into a clean energy future.

Please approve the Joint Stipulation and Recommendation, and make Ohio a leader in innovative clean energy solutions!

Sincerely,  
Chad Nester

---

Dear Ohio Power Siting Board OPSB,

Dear Chairman Haque and members of the Ohio Power Siting Board,

As an Ohioan, I care deeply about how we generate energy for our state because the type of energy we choose to generate has a direct impact on me and my family's health, and on the overall well-being of our environment. That is why I ask you to approve the Joint Stipulation and Recommendation signed by Icebreaker, the Ohio Environmental Council, Sierra Club, the Business Network for Offshore Wind, and the Indiana/Kentucky/Ohio Regional Council of Carpenters.

Project Icebreaker is an innovative effort to provide Ohio with more clean energy and reduce our heavy reliance on fossil fuels. Approximately 60% of Ohio's power comes from coal, and Project Icebreaker will bring an emission-free source of power to Ohio's energy portfolio, reducing carbon dioxide and other harmful air pollution. While Project Icebreaker is only a small project, it must move forward in order to determine what possibilities exist for Ohio to become a leader in offshore wind, ensuring our children and grandchildren have clean air to breathe and a healthy lake, free from chemicals and pollutants resulting from continued use of fossil fuels.

Cuyahoga County's commitment to purchase electricity from Project Icebreaker not only transitions the community to clean energy sources, ensuring cleaner air for the most vulnerable populations, but will create new job opportunities across a region where they are desperately needed. The City of Cleveland also recently became the first city in Ohio, joining 80 other U.S. cities, in pledging to transition to 100% renewable power by 2050. Project Icebreaker will help them achieve that goal.

LEEDCo and Fred Olsen Renewables have carefully considered Ohio's need for clean energy sources to help combat air pollution and climate change with the need to protect Lake Erie's water, fisheries and migratory birds. The groups have done numerous studies to ensure the location of the turbines minimizes impacts on fish and wildlife, and Project Icebreaker has forged important partnerships with local universities and research firms to create a world class research center. The center will study the actual impacts of the six turbine offshore freshwater wind farm on fish, birds, and bats to deepen our knowledge to ensure any future development is done as safely as possible.

As an Ohioan, I appreciate the Board's thorough review of the Project Icebreaker proposal, and hope that the Board will strike the right balance between ensuring protection of our birds, bats, aquatic life and our precious Lake Erie, while ensuring this pilot project is able to move forward. The data and information this six turbine project will collect is vital to moving Ohio forward into a clean energy future.

Please approve the Joint Stipulation and Recommendation, and make Ohio a leader in innovative clean energy solutions!

Sincerely,  
Karen Linn

Dear Ohio Power Siting Board OPSB,

Dear Chairman Haque and members of the Ohio Power Siting Board,

I strongly support the approval of the Joint Stipulation and Recommendation before you that was signed by Icebreaker, the Ohio Environmental Council, Sierra Club, the Business Network for Offshore Wind, and the Indiana/Kentucky/Ohio Regional Council of Carpenters. These parties have obviously worked hard to balance the business, environmental and other issues that this project presents in order to reach an agreement to benefit all Ohioans.

Project Icebreaker is an important and innovative effort to provide Ohio with more clean energy and reduce our heavy reliance on fossil fuels. Approximately 60% of Ohio's power comes from coal, and Project Icebreaker will bring an emission-free source of power to Ohio's energy portfolio, reducing carbon dioxide and other harmful air pollution. While Project Icebreaker is only a small project, it should move forward in order to determine what possibilities exist for Ohio to become a leader in offshore wind, ensuring our children and grandchildren have clean air to breathe and a healthy lake, free from chemicals and pollutants resulting from continued use of fossil fuels.

Our County's commitment to purchase electricity from Project Icebreaker not only transitions the community to clean energy sources, ensuring cleaner air for the most vulnerable populations, but will create new job opportunities across a region where they are desperately needed. The City of Cleveland also recently became the first city in Ohio, joining 80 other U.S. cities, in pledging to transition to 100% renewable power by 2050. Project Icebreaker will help them achieve that goal.

LEEDCo and Fred Olsen Renewables have carefully considered Ohio's need for clean energy sources to help combat air pollution and climate change with the need to protect Lake Erie's water, fisheries and migratory birds. The City of Cleveland also recently became the first city in Ohio, joining 80 other U.S. cities, in pledging to transition to 100% renewable power by 2050. Project Icebreaker will help them achieve that goal.

LEEDCo and Fred Olsen Renewables have carefully considered Ohio's need for clean energy sources to help combat air pollution and climate change with the need to protect Lake Erie's water, fisheries and migratory birds. The groups have done numerous studies to ensure the location of the turbines minimizes impacts on fish and wildlife, and Project Icebreaker has forged important partnerships with local universities and research firms to create a world class research center. The center will study the actual impacts of the six turbine offshore freshwater wind farm on fish, birds, and bats to deepen our knowledge to ensure any future development is done as safely as possible.

As an Ohioan, I appreciate the Board's thorough review of the Project Icebreaker proposal, and hope that the Board will strike the right balance between ensuring protection of our birds, bats, aquatic life and our precious Lake Erie, while ensuring this pilot project is able to move forward. The data and information this six turbine project will collect is vital to moving Ohio forward into a clean energy future.

Please approve the Joint Stipulation and Recommendation, and make Ohio a leader in innovative clean energy solutions!

Sincerely,  
Marketa Anderson

Dear Ohio Power Siting Board OPSB,

Dear Chairman Haque and members of the Ohio Power Siting Board,

I am writing to express my support for the Icebreaker Windpower project. I ask you to approve the Joint Stipulation and Recommendation signed by Icebreaker, the Ohio Environmental Council, Sierra Club, the Business Network for Offshore Wind, and the Indiana/Kentucky/Ohio Regional Council of Carpenters.

Project Icebreaker is an innovative effort to provide Ohio with more clean energy and reduce our heavy reliance on fossil fuels. Approximately 60% of Ohio's power comes from coal, and Project Icebreaker will bring an emission-free source of power to Ohio's energy portfolio, reducing carbon dioxide and other harmful air pollution. While Project Icebreaker is only a small project, it must move forward in order to determine what possibilities exist for Ohio to become a leader in offshore wind, ensuring our children and grandchildren have clean air to breathe and a healthy lake, free from chemicals and pollutants resulting from continued use of fossil fuels.

Cuyahoga County's commitment to purchase electricity from Project Icebreaker not only transitions the community to clean energy sources, ensuring cleaner air for the most vulnerable populations, but it will also create new job opportunities across a region where they are desperately needed.

The City of Cleveland also recently became the first city in Ohio, joining 80 other U.S. cities, in pledging to transition to 100% renewable power by 2050. Project Icebreaker will help them achieve that goal.

LEED Co and Fred Olsen Renewables have carefully considered Ohio's need for clean energy sources to help combat air pollution and climate change, with the need to protect Lake Erie's water, fisheries and migratory birds. The groups have done numerous studies to ensure that the location of the turbines minimizes impacts on fish and wildlife.

Project Icebreaker has forged important partnerships with local universities and research firms to create a world class research center. The center will study the actual impacts of the six turbine offshore freshwater wind farm on fish, birds, and bats to deepen our knowledge to ensure that any future development is done as safely as possible.

As an Ohioan, I appreciate the Board's thorough review of the Project Icebreaker proposal, and hope that the Board will strike the right balance between ensuring protection of our birds, bats, aquatic life and our precious Lake Erie, while ensuring that this pilot project is able to move forward. The data and information this six turbine project will collect is vital to moving Ohio forward into a clean energy future, which is so crucial to our state's economic and general well-being.

Please approve the Joint Stipulation and Recommendation, and make Ohio a leader in

innovative clean energy solutions!

Sincerely,  
Shelley Stark

Dear Ohio Power Siting Board OPSB,

Dear Chairman Haque and members of the Ohio Power Siting Board,

As an Ohioan, I care deeply about how we generate energy for our state because the type of energy we choose to generate has a direct impact on me and my family's health, and on the overall well-being of our environment. That is why I ask you to approve the Joint Stipulation and Recommendation signed by Icebreaker, the Ohio Environmental Council, Sierra Club, the Business Network for Offshore Wind, and the Indiana/Kentucky/Ohio Regional Council of Carpenters.

Project Icebreaker is an innovative effort to provide Ohio with more clean energy and reduce our heavy reliance on fossil fuels. Dear Ohio Power Siting Board OPSB,

Dear Chairman Haque and members of the Ohio Power Siting Board,

As an Ohioan, I care deeply about how we generate energy for our state. Our choice of source has a direct impact on every family's health, and on the overall wellbeing of our environment. That is why I ask you to approve the Joint Stipulation and Recommendation signed by Icebreaker, the Ohio Environmental Council, Sierra Club, the Business Network for Offshore Wind, and the Indiana/Kentucky/Ohio Regional Council of Carpenters.

Project Icebreaker is an innovative project to provide Ohio with more clean energy, thereby reducing our heavy reliance on fossil fuels. Approximately 60% of Ohio's power comes from coal. Project Icebreaker will bring an emission-free source of power to Ohio's energy portfolio.

That will help in reducing carbon dioxide and other harmful air pollution. Project Icebreaker must move forward to determine how our state may become a leader in offshore wind. That will ensure our children -- and grandchildren-- have clean air to breathe, and a healthy lake, free from chemicals and pollutants from fossil fuels.

Cuyahoga County's commitment to purchase electricity from Project Icebreaker transitions the community to clean energy sources and creates new job opportunities across a region where they are greatly needed. The City of Cleveland recently became the first city in Ohio, joining 80 other U.S. cities, in pledging to transition to 100% renewable power by 2050. Project Icebreaker will help achieve that goal.

LEEDCo and Fred Olsen Renewables have carefully considered Ohio's need for clean energy with the need to protect Lake Erie's water, fisheries and migratory birds. The groups have done numerous studies to ensure the location of the turbines minimizes impacts on fish and wildlife. Project Icebreaker has forged partnerships with local universities and research firms to create a world-class research center. It will study the impacts of the six turbine offshore freshwater wind farm on fish, birds, and bats to deepen our knowledge, and to ensure future development is done as safely as possible.

As an Ohioan, I appreciate the Board's thorough review of the Project Icebreaker proposal, and hope the Board will strike the right balance between ensuring protection of our birds, bats, aquatic life and our precious Lake Erie, while ensuring this pilot project moves forward. The data and information this six-turbine project will collect is vital to moving Ohio forward into a clean energy future.

Please approve the Joint Stipulation and Recommendation, and make Ohio a leader in innovative clean energy solutions!

Sincerely,

Linda Chernick
