**RE: Citizens Against Clear Cutting, et al., Complainants
v. Duke Energy Ohio, Inc., Case No. 17-2344-EL-CSS**

Dear Ms. McNeal,

It has come to our attention that some attachments to the Testimony of Melisa Kuhne, filed on behalf of Complainants, are not complete as filed. For clarity of the record, Complainants are filing a corrected set of all attachments to Ms. Kuhne's testimony. The substance of Ms. Kuhne's testimony remains unchanged. We apologize for any inconvenience.

Please do not hesitate to contact me should you have any questions.

Sincerely,

Kimberly W. Bojko

GRANT OF EASEMENT

DEC-14-50

95449

LADDS —
Ella Rempler

0.70

FOR AND IN CONSIDERATION OF One Dollar and other good and valuable considerations, the receipt whereof is hereby acknowledged, hereby grant unto The Cincinnati Gas & Electric Company, its successors and assigns, a right of way and easement one hundred (100) feet in width, to construct, erect, operate, maintain, repair, replace and remove towers and all necessary and incidental wires, cables, anchors, grounding systems, counterpoises, fixtures and equipment for the transmission and distribution of electrical energy, ~~wherein the company, its successors, assigns, agents, employees, and servants have and shall have full authority and power to do so~~ in, on, over, through and across the following described real estate situate in Section 31, T. 4, E. R. 2, Symmes Township, Hamilton County, State of Ohio, and being a tract of 45.11 acres, more or less, being Lot 1 of Samuel Arbuckle's Estate and being the same property conveyed to the grantor by deed dated April 27, 1899 and recorded in Deed Book 832, page 191, Hamilton County Recorder's Office.

The center line of the said 100 foot right of way and easement is described as follows:

Beginning at a point in the southeast corner of the above described property; thence in a westerly direction along the south boundary line of said property 203.0 feet to a point and the real place of beginning of the easement herein conveyed; thence from said real place of beginning in a northerly direction turning an angle of 90 degrees 36 minutes to the right 479.25 feet to a point; thence continuing in a northerly direction turning an angle of 3 degrees 17 minutes to the right 705.49 feet to a point; thence continuing in a northerly direction turning an angle of 2 degrees 6 minutes to the left 195.10 feet to a point in the center line of Fields-Ertel Road said point being 155.7 feet west of the northeast corner of said property measured along the center line of Fields-Ertel Road.

together with the right to cut, trim or remove any trees, overhanging branches or other obstructions both within and without the limits of the above described right of way and easement which in the opinion of the grantor's engineers may endanger the safety of or interfere with the construction, operation or maintenance of said system, the right to pile dirt, material and equipment on the surface during periods of construction and maintenance, and the right of ingress and egress over the above described property for the purpose of exercising the rights herein granted.

Said Company, its successors and assigns, shall pay all damages to growing crops, buildings and fences, caused by its employees, agents, servants or trucks in exercising the rights herein granted.

No buildings or other structures shall be erected within the limits of the above described right of way and easement by the grantor, heirs or assigns. Grantor, heirs or assigns, shall have the right to cultivate the land within the limits of said right of way and easement in any manner not inconsistent with the rights herein conveyed to the grantees.

If the rights herein granted are not used, at least in part, within twenty-five years from the date of this instrument the same shall become void and shall revert to the then owners of the above described property.

Grantor, heirs or assigns, full power to convey said right of way and easement and warrant same and will defend the same against all claims of all persons.

WITNESS my hand this 12 day of October, 1950

signed and acknowledged in the presence of:

Charles J. Challas
Harry Kasfi

Ella M. Rempler

Notary Public in and for said County, Hamilton County, Ohio

Ella M. Rempler

I have acknowledged the signing of the foregoing instrument to be a voluntary act and deed for the uses and purposes therein set forth. IN TESTIMONY WHEREOF, I have hereunto set my hand and affixed my notarial seal this 12th day of October, 1950

DEED 141550 AT 2:14 PM
RECORDED - DEC 14 1950
Hamilton County, Ohio
My Com. Exp. Oct. 4, 1953

☐ Distribution ☒ Transmission

Dear Customer and/or Property Owner:

At Duke Energy, we're committed to the proper maintenance of trees and vegetation to help provide safe and reliable electricity for you and your neighbors. We were here today to notify you of the following:

☒ See information letter enclosed.

- ☐ A Duke Energy contract tree crew will soon be performing power line vegetation management in your area.
- ☐ To prevent an electrical outage or hazardous situation, trees in the right of way on your property need to be pruned or taken down. Duke Energy will perform this work at no cost to you.
- ☐ The trees that you reported were inspected. Since no immediate danger is present, this work will be performed during our regularly scheduled vegetation management. Duke Energy will perform this work at no cost to you.
- ☐ Duke Energy does not need to perform the work you requested because the trees do not cause safety or reliability concerns.
- ☐ Hazard tree(s) marked with paint or ribbon should be taken down. Should any of these tree(s) fall and come in contact with the power line, a safety hazard could be created or your electric service interrupted.
- ☐ Duke Energy has performed emergency outage restoration work caused by an act of nature. This work required trees to be trimmed or cut down. Duke Energy is not responsible for cleanup of wood and debris when this occurs.
- ☐ Duke Energy has identified vegetation that needs to be controlled by herbicide. Duke Energy's contract crews will be in the area in the near future applying approved herbicides.
- ☐ To ensure safe and reliable electric and gas service for you and your neighbors, a Duke Energy contract mowing crew will soon be mowing right-of-way corridors in your area.
- ☐ Other: _____

Thank you.

If you have specific questions, your primary contact is the person identified on the attached business card. For additional questions please call Duke Energy Vegetation Management at 866.385.3875. For information about our Integrated Vegetation Management program please visit us online at duke-energy.com/safety/right-of-way-management.asp.

To: Current Resident
RE: Fences and R/W Access

In planning for Vegetation Maintenance activity and access, your property has been identified as having a fence in or adjacent to the Right of Way.

Please contact Steven Holton via phone or e-mail to schedule a meeting at your location to discuss gate installation.

The enclosed Right of Way Guidelines/Restrictions (item number 2) outline the fence specifications which will be discussed.

This work will be performed at no cost to the property owner.

Thank you,

Steven Holton

ELECTRIC TRANSMISSION RIGHT-OF-WAY GUIDELINES/RESTRICTIONS VALID FOR OHIO, INDIANA AND KENTUCKY (Revised 11/20/14)

This list of right-of-way restrictions has been developed to answer the most frequently asked questions about property owner use of Duke Energy's electric transmission rights of way. This list does not cover all restrictions or all possible situations. You should contact the Asset Protection right-of-way specialist if you have additional concerns about the rights of way. This list of restrictions is subject to change at any time and without notice. Duke Energy reserves all rights conveyed to it by the right-of-way agreement applicable to the subject property. All activity within the rights of way shall be reviewed by an Asset Protection right-of-way specialist to obtain prior written approval. Engineering plans may be required. Compliance with the Duke Energy Right-of-Way Guidelines/Restrictions or approval of any plans by Duke Energy does not mean that the requirements of any local, county, state or federal government or other applicable agency with governing authority have been satisfied.

1. Structures, buildings, manufactured/mobile homes, satellite systems, swimming pools (and any associated equipment and decking), graves, billboards, dumpsters, signs, walls, deer stands, retaining walls, septic systems or tanks (whether above or below ground), debris of any type, flammable material, building material, wrecked or disabled vehicles and all other objects (whether above or below ground) which in Duke Energy's opinion interfere with the electric transmission right of way are not allowed within the right-of-way limits. Transformers, telephone/cable pedestals (and associated equipment) and fire hydrants are not allowed. Manholes, water valves, water meters, backflow preventers and irrigation heads are not permitted. Attachments to Duke Energy structures are prohibited.
2. Fences and gates shall not exceed 10 feet in height and shall be installed greater than 25 feet from poles, towers and guy anchors. Fences shall not parallel the centerline within the rights of way but may cross from one side to the other at any angle not less than 30 degrees with the centerline. If a fence crosses the right of way, a gate (16 feet wide at each crossing) shall be installed by the property owner, per Duke Energy's specifications. The property owner is required to install a Duke Energy lock on the gate to ensure access. Duke Energy will supply a lock.
3. Grading (cuts or fill) shall be no closer than 25 feet from poles, towers, guys and anchors (except for parking areas; see paragraph 7) and the slope shall not exceed 4:1. Grading or filling near Duke Energy facilities which will prevent free equipment access or create ground-to-conductor clearance violations will not be permitted. Storage or stockpiling of dirt or any construction material is prohibited. Sedimentation control, including re-vegetation, is required per state regulations.
4. Streets, roads, driveways, sewer/water lines, other utility lines or any underground facilities shall not parallel the centerline within the right of way but may cross, from one side to the other, at any angle not less than 30 degrees with the centerline. No portion of such facility or corresponding easement shall be located within 25 feet of Duke Energy's facilities. Roundabouts, cul-de-sacs and intersections (such as roads, driveways and alleyways) are not permitted.
5. Any drainage feature that allows water to pond, causes erosion, directs stormwater toward the right of way or limits access to or around Duke Energy facilities is prohibited.
6. Contact Duke Energy prior to the construction of lakes, ponds, retention or detention facilities, etc.
7. Parking may be permitted within the right of way, provided that:
 - a. Prior to grading, concrete barriers shall be installed at a minimum of 9 feet from the Duke Energy facilities. During construction, grading shall be no closer than 10 feet to any Duke Energy facility.
 - b. After grading/paving activity is complete, Duke Energy-approved barrier sufficient to withstand a 15-mph vehicular impact shall be erected 9 feet from any Duke Energy facility.
 - c. Any access areas, entrances or exits shall cross (from one side to the other) the right of way at any angle not less than 30 degrees with the centerline and shall not pass within 25 feet of any structure. Parking lot entrances/exits cannot create an intersection within the right of way.
 - d. Lighting within the right-of-way limits must be approved by Duke Energy before installing. Due to engineering design standards, lighting is not allowed in the "Wire Zone." Where lighting is approved ("Border Zone"), the total height may not exceed 15 feet. Contact your Asset Protection right-of-way specialist as the "Wire Zone" varies for the different voltage lines.
8. Duke Energy will not object to certain vegetation plantings as long as:
 - a. They do not interfere with the access to or the safe, reliable operation and maintenance of Duke Energy facilities.
 - b. With prior written approval, Duke Energy does not object to low-growing shrubs and grasses within the "Wire Zone." Tree species are not allowed within the "Wire Zone." Trees that are approved in the "Border Zone" may not exceed, at maturity, 15 feet in height. Contact the Asset Protection right-of-way specialist for "Wire Zone"/"Border Zone" definitions.
 - c. For compliant mature height species, refer to plantfacts.cau.edu.plantlist/index.html for reference.
 - d. Engineering drawings must indicate the outermost conductors.
 - e. Vegetation that is not in compliance is subject to removal without notice.
 - f. Duke Energy may exercise the right to cut "danger trees" outside the right-of-way limits as required to properly maintain and operate the transmission line.

We hope this is useful information. If you have additional questions or plan any activity not mentioned above, please contact the Asset Protection right-of-way specialist for your area (see map).

Transmission Right-of-way Zones - Midwest

Wire Zone: Extends beyond the outermost conductor on both sides. (See diagram above.)

Permitted within the Wire Zone: Low-growing plants, shrubs and grasses.
Not permitted within the Wire Zone: Tree species of any kind.

Border Zone: Extends from the edge of the Wire Zone to the outside edge of the Right of Way.

Permitted within the Border Zone: Lighting structures and plantings within the Right of Way that do not exceed a vertical height of 15 feet. For compliant mature height species, refer to plantfacts.osu.edu/plantlist/index.html.

Not permitted within the Border Zone: Any object that exceeds vertical height restrictions. These restrictions are based on flat ground elevations. If the ground elevations differ, no object at any time may exceed the outermost conductor's ground elevation.

Peripheral Zone: Outside the Right of Way and adjacent to Border Zones.

Permitted within the Peripheral Zone: Trees may be planted in the Peripheral Zone. Duke Energy recommends customers exercise caution selecting and planning trees in this zone.

Not permitted in the Peripheral Zone: Trees with canopies are subject to routine trimming and possible removal.

In all zones:

When an outage risk is identified, Duke Energy will attempt to notify the affected customer. However, the company may need to take immediate action if trees cannot be pruned to appropriate levels. This may include trees and shrubs that are within 20 feet of the power line at the maximum peak load or during weather conditions that create line sag and sway.

Written approvals by Duke Energy are required for all plans.

We hope this is useful information. If you have additional questions on line voltages or plan any activity not mentioned above, please contact the Asset Protection Specialist for your area. (See Map)

*Right of Way is intended to reference the easement rights granted to Duke Energy. Actual zone size may vary based upon the particular Right of Way.

Why must Duke Energy remove trees?

Reliable electricity is important to our customers

Trees are part of the natural beauty of the Midwest. Duke Energy recognizes the important role trees play in enhancing the beauty of communities and contributing to the quality of life for our customers in Indiana, Ohio and Kentucky. While the trees that thrive throughout the 26,054 square miles of our service area are a tremendous source of pride, trees and limbs that fall into power lines also are the number one cause of power outages.

Our customers want reliable power – in both good and bad weather. It's our responsibility to ensure power lines that transmit electricity are free from trees, overgrown shrubbery and other obstructions that can prevent continuous, safe and reliable electric service to the more than 1.6 million Midwest customers who depend on us 24 hours a day. Trees that are close to power lines must be trimmed or removed so they don't disrupt electric service to households, businesses, schools and hospitals.

Our crews use a variety of methods to manage vegetation growth along distribution and transmission power line rights of way, including vegetation pruning, tree removal and herbicides. These approaches are based on widely accepted standards developed by the tree care industry for maintenance and operations and approved by the American National Standards Institute (ANSI).

Transmission rights of way

High-voltage transmission lines provide large amounts of electricity over long distances. The transmission lines in your community are part of the larger, interconnected grid system that powers an entire region, not just the community through which the lines run. Federal rules are more stringent for some transmission lines, depending on the voltage, and may include fines up to \$1 million per day for tree-related outages. We manage our grid to provide reliable operation of transmission facilities while adhering to regulations and easement rights.

Distribution rights of way

Distribution lines carry power from local substations to homes and businesses. An electric distribution right of way may also contain other utilities (electric, telephone, cable, water and/or gas) that must be maintained as well. Duke Energy manages rights of way to provide reliable delivery of electricity.

Vegetation Management methods

We use an Integrated Vegetation Management approach, which includes careful pruning, selective herbicidal application and tree removal. This allows us to proactively evaluate power line areas and determine the best method for maintaining reliable service. The objective of an Integrated Vegetation Management program is to maintain the lines – before the trees and brush are close enough to cause outages – in a manner that's consistent with good arboricultural practices.

Maintaining rights of way

Well-maintained rights of way help prevent power outages and allow our vehicles and personnel to safely access our electrical equipment for operations, maintenance and storm response. By maintaining vegetation around our equipment, we can get our customers' power restored more efficiently and safely.

Maintaining easements

Easements allow us access to mow, prune or cut down vegetation that may interfere with our transmission equipment and the ability to deliver safe reliable power. They also give us the space we need to build new equipment to meet the future energy demands of our customers.

Sometimes public and private entities plant trees in the easements that impede our ability to operate and maintain these critical assets. Trees planted outside of a right of way also can grow into our easement and endanger our equipment. We recommend that you only plant grass in an electric transmission rights of way or easement.

Why trimming doesn't always work

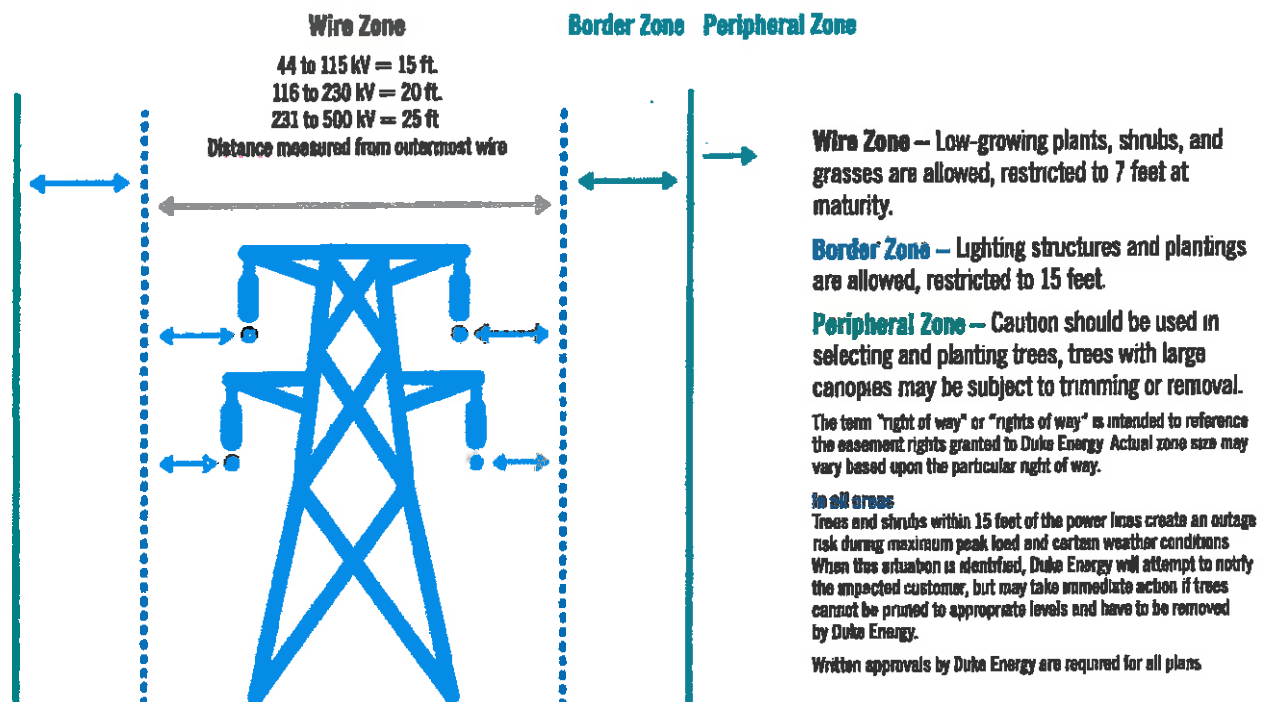

We're often asked why we remove some trees instead of trimming them. Trimming is not always healthy for the trees.

Duke Energy has thousands of miles of right of way to maintain; even with the latest technology, some fast-growing tree species can outpace our ability to keep them in check. When we have to cut down trees, we take care to leave the area in the same condition as we found it.

Before planting, visit our right-of-way website at duke-energy.com/safety/right-of-way-management.asp. To report trees growing into power lines, visit duke-energy.com/indiana/outages/tree-trimming.asp and fill out the online form.

Questions? Please call 866.385.3675 to ask for a Duke Energy transmission forester to contact you.

Duke Energy Ohio
Case No. 17-2344-EL-CSS
Citizens Against Clear Cutting Request for Production of Documents
Date Received: January 25, 2018

CACC-POD-01-010

REQUEST:

Produce and attach copies of all written communications, including emails and physical communications, between Duke employees or between Duke employees and third parties related to Duke's decision to implement, or actual implementation of, its plan to clear cut trees and other vegetation on or near properties owned by Complainants.

RESPONSE:

Objection. This Document Request seeks to elicit privileged and confidential information that is protected by the attorney work product doctrine or the attorney client privilege. This Document Request also fails to contain any reasonable time parameters pursuant to which it is to be answered nor is it limited to the transmission line at issue in the case, thereby rendering it overly broad, unduly burdensome, and vague. Objecting further, it seeks documents that are irrelevant and not likely to lead to the discovery of admissible evidence. Finally, this Interrogatory is vague and ambiguous as to the meaning of the phrase "clear cut" as such phrase is undefined.

PERSON RESPONSIBLE: Legal

SUPPLEMENTAL RESPONSE:

See response to CACC-INT-01-039.

PERSON RESPONSIBLE: Legal

295	X25-X1-127	RAPP BRANDON W &	12060 PAULMEADOWS DR	CINCINNATI	OH	45249	12060 PAULMEADOWS DR				DH Left (EM 10/17). Margot left me a VM (SH 10/18). I returned call leaving VM (SH 10/18). Meeting set for 10/20 (SH 10/19). Wants EMF "surveyed/measured"-told her I do not know if this is something still done... Standard Maint, remove additional willow tree flagged in blue (one-cut tree). Grind stumps, does not want bed around pine beneath wire seeded/strawed, will convert it to flower bed (SH 10/20). Non-responsive landowner
296	X25-X1-127	BETTMAN JAY A & MARY ANN	12063 TIMBERLAKE DR	CINCINNATI	OH	45249	12063 TIMBERLAKE DR				Remove redbud outside R/W flagged in blue. Leave the white pine at edge of BZ and the viburnum immediately adjacent to it, on house side of R/W at S end of property. All other trees in R/W are removals, remove all wood.
297	X25-X1-127	NIGHTINGALE MIKE	12054 PAULMEADOWS DR	CINCINNATI	OH	45249	12054 PAULMEADOWS DR				Standard Maintenance agreed to, chip/haul away all wood.
298	X25-X1-127	HELLMAN KYLE M	8414 HERITAGE DR	CINCINNATI	OH	45249	8414 HERITAGE DR				Standard maint agreed to.
300	X25-X1-126	JOHN JOHN W & LINDA L CHEN	8415 HERITAGE DR	CINCINNATI	OH	45249	8415 HERITAGE DR				Non-responsive landowner
301	X25-X1-126	MCINTOSH JOHN A III	8415 HERITAGE DR	CINCINNATI	OH	45249	8415 HERITAGE DR				He is OK with tree removals and fence installation, standard Maint agreed to- but he is in Idaho, where he now resides and will be trying to sell the house once his wife/whenever/ ugly divorce thing that is going on allows him to do so SO we NEED to be on point as far as damage/cleanup, especially if we are hauling everything South of there up and out through his property (not that we don't need to be doing this everywhere).
302	X25-X1-126	WILLIAMS TROY E JR &	12038 PAULMEADOWS DR	CINCINNATI	OH	45249	12038 PAULMEADOWS DR				He will take down back fence, if need be. Is OK with work that needs to occur, particularly as what is on his property is compliant- just is concerned with damage to his compliant plants in the R/W in the process of removing wood. What I was indicates we should be good, as what there should be able to be removed from other side of fence. Be certain to not damage his shrubs.
303	X25-X1-126	DAVIS WAYNE L &	12039 TIMBERLAKE DR	CINCINNATI	OH	45249	12039 TIMBERLAKE DR				Standard maint agreed to, grind stumps, MOU signed for gates

**Duke Energy Ohio
Case No. 17-2344-EL-CSS
CACC Fifth Set of Interrogatories
Date Received: July 20, 2018**

CACC-INT-05-033

REQUEST:

If the response to CACC-05-032 is affirmative, which trees and/or other vegetation has Duke allowed to remain along the five transmission lines at issue in this case that would not be permitted to remain pursuant to the terms outlined in Exhibit C to the Second Amended Complaint? Please identify with specificity.

RESPONSE: There was one property where there were site-specific concerns which led Duke Energy Ohio to prune incompatible trees rather than remove them.

PERSON RESPONSIBLE: Ron Adams

**Duke Energy Ohio
Case No. 17-2344-EL-CSS
Citizens Against Clear Cutting First Set of Interrogatories
Date Received: January 25, 2018**

CACC-INT-01-014

REQUEST:

Within the last two Transmission Clearing Cycles, has Duke previously clear cut trees and vegetation on any of the Complainants' properties?

RESPONSE:

Objection. This Interrogatory is overly broad unduly burdensome in that there are more than 85 properties and property owners at issue in the Second Amended Complaint. Furthermore, this Interrogatory is vague and ambiguous as to the definition and meaning of the phrase "Transmission Clearing Cycles." Finally, this Interrogatory is vague and ambiguous as to the phrase "clear cut trees and vegetation" as this phrase is undefined.

SUPPLEMENTAL RESPONSE:

Pursuant to the Attorney Examiner's ruling wherein the response is limited to the five transmission circuits relevant to this proceeding, transmission clearing is done on a six year cycle that is continuous. The Company has addressed vegetation management along these lines in the past twelve years but was more focused on the maintenance of trees and non-contentious removals to accommodate individual property owners rather than the full management of the right of way for overall safety and reliability of the transmission system. In doing so, the Company performed vegetation management practices consistent with its vegetation management program that was approved by the Public Utilities Commission of Ohio during the relevant time period.

PERSON RESPONSIBLE: Legal

THE PUBLIC UTILITIES COMMISSION OF OHIO

In the Matter of the Application of Duke)
 Energy Ohio, Inc., for Approval of)
 Revised Paragraph (f) of its Proposed) Case No.16-915-EL-ESS
 Programs for Inspection, Maintenance)
 Repair and Replacement of Distribution)
 and Transmission Lines.)

**APPLICATION OF DUKE ENERGY OHIO, INC. FOR APPROVAL OF
 REVISED PARAGRAPH (F) OF ITS PROGRAMS
 FOR INSPECTION, MAINTENANCE, REPAIR AND REPLACEMENT
 OF DISTRIBUTION AND TRANSMISSION LINES**

The Public Utilities Commission of Ohio (Commission) regulations provide that each "electric utility and transmission owner shall establish, maintain, and comply with written programs, policies, procedures, and schedules for the inspection, maintenance, repair, and replacement of its transmission and distribution circuits and equipment," Rule 4901:1-10-27(E)(1). Further, the rules provide that all revisions or amendments requested by an electric utility shall be filed with the commission as outlined in paragraph (E)(2) of the rule. Pursuant to Rule 4901:1-10-27(E)(2), Duke Energy Ohio, Inc. (Duke Energy Ohio) hereby submits a requested change to the language contained within its currently approved inspection, maintenance, repair and replacement programs.

Specifically, Duke Energy Ohio has deleted the language contained only in paragraph (f) and replaced it with a new paragraph (f), "Overhead Electric Line Vegetation Management." Changes to this section were made simply to clarify and make the terms more coherent. There are no substantive changes to the program. For these reasons, Duke Energy Ohio respectfully requests that the Commission approve these changes as requested. A redlined version of the edited section that is included within the overall program terms is attached as Exhibit 1.

Respectfully submitted,

DUKE ENERGY OHIO, INC.

Amy B. Spiller (0047277)

Deputy General Counsel

Elizabeth H. Watts (0031092)

Associate General Counsel

4901:1-10-27 (E)(1) Inspection, maintenance, repair, and replacement of transmission and distribution facilities (circuits and equipment).

(a) Poles and Towers

Duke Energy Ohio shall inspect all DEO owned poles on a 10 year schedule and treat, repair or replace as needed. Poles and towers shall be visually inspected in compliance with inspection program 4901:1-10-27 (D)(1),(2). The goal shall be to maintain adequate strength and integrity of poles and towers per the National Electrical Safety Code. Based on the inspection results, repair work orders shall be prepared as needed and tracked until complete.

All equipment and hardware on poles shall be inspected as follows: Duke Energy shall check condition of base of the pole for rotting, termites, and other abnormalities. Poles involved with landslides or "wash outs", leaning for any reason; objects hanging on or near pole; burning pole, cross-arms, and/or braces; ground wire broken; cross-arms or broken braces; bird holes; and vehicular damage. Communities or municipalities often have permission to post/attach traffic control and similar signs on utility poles. Business, political, and yard sale or similar signs shall be removed.

Refer to Exhibit A for complete pole inspection specifications.

Towers shall be inspected as follows: Duke Energy Ohio will inspect for loose, bent, rusty, or missing steel; Duke Energy Ohio shall inspect numbers and "Danger Hi-Voltage" signs; base of tower rusted; involved with landslides or "wash outs"; objects hanging on or near tower; and flashings lights on tower (FAA).

(b) Circuit and Line Inspections

The distribution inspection program shall consist of a driving or walking visual inspection. All distribution circuits shall be inspected on a 5-year schedule as part of the distribution inspection program 4901:1-10-27(D)(1),(2). Inspectors shall document physical defects or other potential hazards to the safe and reliable operation of the circuits. Based on the inspection results, those findings that are determined to be critical will be immediately reported for assessment and repair. Otherwise, repair work orders are prepared as needed and tracked until complete.

Refer to Exhibit B for LEVEL definitions and examples.

When LEVEL 1 (L1) situations are found, the inspector will contact the appropriate district Work Coordinator immediately. If there is no answer, the inspector will leave a message and contact the appropriate District Supervisor and provide complete, detailed and thorough as possible description of the situation found when entering details into eMax. eMax is Duke Energy's computerized maintenance management system in which Duke Energy maintains centralized records of all equipment and maintenance performed on that equipment. This will assist Transmission & Distribution Construction personnel in evaluating the situation.

Two-pole conditions are those where in the field, two poles sit side by side and where one pole is in the process of being removed/changed out. Duke Energy Ohio shall log two-pole conditions into eMax when found in the field. Enter pole numbers, physical location, and

attachments; type and number of attachments. Deteriorated "Elephant Ear" cutouts, deteriorated "Fuzzy Barrel" fuse tubes, taped fuse tubes, and deteriorated, checked or cracked Durabute ("Chicken Wing") cutouts should be logged as a priority LEVEL 3 (L3).

(c) Primary enclosures (e.g., pad-mounted transformers and pad-mounted switch gear) and secondary enclosures (e.g., pedestals and hand holes)

The distribution inspection program shall consist of a visual inspection. All pad-mounted transformers, secondary pedestals, hand holes and primary switchgear shall be inspected on a 5-year schedule as part of the distribution inspection program 4901:1-10-27(D)(1). Inspectors shall document physical defects or other potential hazards to the operations of the transformers, switch gear, and secondary enclosures. This inspection shall identify exterior physical defects in equipment or potential hazards such as transformers that are rusted, leaking, oil-stained, have broken hinges, missing locks and/or bolts. Based on the inspection results, repair work orders shall be prepared as needed and tracked until complete.

Refer to Exhibit C for priority definitions.

In eMax, the term "TRANSFORMER" – "OTHER" shall be used to refer to damage(s) to box pads.

(d) Line reclosers

Line reclosers and sectionalizers shall be visually inspected each year. The units shall be inspected for signs of damage or deterioration and the operations-counter readings shall be recorded. Items to look for are black or burnt marks on equipment and/or molten metal, indicating that a flash has occurred at the recloser installation. Based on the inspection results, repair work orders shall be prepared as needed and tracked until complete.

A Commissioning Test is performed on all newly installed electronically controlled reclosers. Hydraulic under oil units shall be removed from service every 6 years for maintenance. Vacuum under oil units shall be removed from service every 7 years for maintenance. Work Orders shall be initiated for annual inspections of reclosers. Inspectors shall visually inspect the recloser site for issues, document the counter reading, etc. The inspectors then shall enter the Work Order information into an Excel spreadsheet.

(e) Line capacitors

Electronic remote monitoring will replace the annual visual inspection wherever the capability has been installed and activated. Distribution line capacitors will still be reviewed visually within the existing requirements of the 5 year line patrol program.

As part of the Duke Energy SmartGrid Capacitor upgrades, Duke Energy has implemented two components for monitoring the status of capacitors. The first component is through our DMS system. Alarms are received from capacitors, through DMS, and alert our operators to take action. The second component is CapCentral. CapCentral is a software program that queries historical data in our PI database and identifies trends that need to be addressed.

DMS

The DMS system is set up to receive two types of alarms. We intentionally limited the types of alarms in DMS to those conditions where an operator would need to take action, for the health of the system.

- 1.) **High/Low Voltage Alarm** - If too many capacitor banks are in service on the system during low load conditions then a voltage rise on the system occurs. If there are not enough capacitors on the system during peak load conditions then low voltage may occur. In both of these conditions, an operator would need to take action to bring the system back into normal operating conditions.

High Neutral Current Alarm - This occurs when one or two phases of the three phase capacitor bank is removed from service. This can be caused by a fuse operating or a switch failing to close. In this case, because of the voltage imbalance introduced, the operator removes the bank from service. After repairs are completed the bank is restored to service.

CapCentral

The CapCentral system is set up to help us maintain oversight over our fleet of capacitors on our system, based on historical data reported by the capacitor and stored in our PI database. The data points we query do not need immediate action by an operator to maintain the health of the system, but they are data points that give indication to the health of our system and fleet of capacitors. The data points we query using CapCentral are: Delta Voltage, Frequency of Operations, High/Low Voltage, Self Diagnostic, Remote Manual, Loss of Communications, and High Neutral Current.

Based on the results of monitoring the statuses of these capacitors, repair work orders are prepared as needed and tracked until complete.

The repair intervals for issues found during an inspection are the same duration as Circuit and Line inspections. A LEVEL 1 (L1) = 72 hours, LEVEL 3 (L3) = 60 working days maximum, LEVEL 5 (L5) = 6 to 12 months, and LEVEL 7 (L7) = no time frame, not a safety or reliability issue. The repair work for Level 7 issues shall be completed when other equipment is repaired at that location.

(f) Overhead Electric Line Vegetation Management

The following overhead electric line vegetation management requirements are intended to establish minimum clearing cycles by Duke Energy Ohio, and minimum clearances of vegetation from Duke Energy Ohio overhead electric line facilities following such clearing cycles. These requirements shall not be construed to limit Duke Energy Ohio's right to cut down and remove vegetation from a Duke Energy Ohio corridor when Duke Energy Ohio has the legal right to do so, e.g., statute, recorded easement grant, easement by prescription, license, condemnation order, etc.

Distribution Clearing Cycle - Duke Energy Ohio shall clear vegetation away from its distribution lines at least once every four years which may include cutting down and removing vegetation from a Duke Energy Ohio corridor when Duke Energy Ohio has the legal right to do so. The goal shall be to help maintain and improve safe and reliable electric service by limiting

or eliminating the possibility of contact by vegetation which has grown towards the overhead distribution lines.

Transmission Clearing Cycle - Duke Energy Ohio shall clear vegetation away from its transmission lines (69KV and above) at least once every six years which may include cutting down and removing vegetation from a Duke Energy Ohio corridor when Duke Energy Ohio has the legal right to do so. The goal shall be to help maintain and improve safe and reliable electric service by limiting or eliminating the possibility of contact by vegetation which has grown towards the overhead transmission lines.

Minimum Distribution Line Clearances

- For any two phase or three phase primary distribution line, vegetation shall be no closer than ten feet to an energized conductor when the clearing is completed. In addition, Duke Energy Ohio shall remove any "unsuitable" branch above the distribution line even though it is located more than ten feet away from an energized conductor. An "unsuitable" branch above the distribution line includes one which is either weak, diseased or decaying, or is part of a tree which is.
- For any single phase primary distribution line, vegetation shall be no closer than ten feet to an energized conductor when the clearing is completed. In addition, Duke Energy Ohio shall remove any branch above the distribution line even though it is located more than ten feet away from an energized conductor if it is within an area 15 feet from the energized conductor measured at a 45 degree angle.
- For any open wire secondary distribution line (without a primary distribution line and excluding a service drop), vegetation shall be no closer than five feet to an energized conductor when the clearing is completed.
- For any triplex or street light distribution line (excluding a service drop), vegetation shall be no closer than twelve inches to an energized conductor when the clearing is completed.
- Duke Energy Ohio shall have no responsibility to clear vegetation from a service drop.

Minimum Transmission Line Clearances

- For any transmission line (69kV and above), vegetation shall be no closer than fifteen feet to an energized conductor when the clearing is completed. In addition, Duke Energy Ohio shall remove any branch above the transmission line even though it is located more than fifteen feet from any energized conductor.

Minimum Transmission Line Overbuild Clearances

- For any transmission line (69KV and above) which is located above any distribution line on the same supporting structure, vegetation shall be no closer than fifteen feet to an energized conductor on either line. In addition, Duke Energy Ohio shall remove any branch above the transmission line even though it is located more than fifteen feet from any energized conductor.

(f) ~~Right-of-way vegetation management~~

~~Distribution Vegetation Management—Duke Energy Ohio shall perform vegetation line clearing on distribution circuits at least once every four years. The goal shall be to help provide maintain and improve safe and reliable electric service by limiting contact between vegetation and power lines.~~

~~Transmission Vegetation Management—Duke Energy Ohio shall provide vegetation line clearing on transmission circuits at least once every six years. The goal shall be to help provide maintain and improve safe and reliable electric service by limiting contact between vegetation and power lines.~~

~~For two phase and three phase primary lines, side clearances shall be at least ten feet from tree branches to nearest conductor. Duke Energy Ohio shall remove unsuitable overhanging/enroaching limbs/branches above the conductor. Unsuitable overhanging/enroaching limbs/branches includes limbs that are smaller diameter, weak, diseased, or decaying, or are positioned in a horizontal manner. Mature, well-established hardwood trees with structurally sound overhanging limbs or branches greater than six inches diameter may remain. At least Ten foot clearance shall be obtained from the lowest conductor to the nearest vegetation for trees underneath the primary.~~

~~For transmission lines 69kV and above, side clearances should provide a minimum of fifteen feet clearance from the tree branches to the nearest conductor. Duke Energy Ohio shall remove overhanging or enroaching branches above the conductor. For trees underneath the primary, Duke Energy Ohio shall maintain a fifteen foot minimum clearance from the lowest conductor to the nearest vegetation.~~

~~For over builds, where there are transmission circuits on the same structure as the distribution circuits, the circuits shall be trimmed to fifteen feet clearance from the tree branches to the nearest conductor of each circuit.~~

~~For single phase lines, side clearances shall be provided ten feet clearance from the tree branches to the nearest conductor. For overhang on a single phase line, all live branches above the conductors shall be removed to a minimum height of fifteen feet above the nearest conductor, and at a 45 degree angle. Duke Energy Ohio shall remove all branches that will could potentially become overhang and lighten up remaining overhang and remove all dead and structurally weak branches overhanging any primary voltages. Undersneath the primary, Duke Energy Ohio shall maintain at least a ten foot clearance from the lowest conductor to the nearest vegetation.~~

~~For open wire secondary (without primary), open wire secondaries shall be pruned to obtain a minimum of five feet of clearance around the conductors. Other secondaries and (excluding service drops) shall be pruned to remove any obvious line damaging limbs. These would be limbs of a size substantial enough that through continued rubbing or pressure due to weight will likely lead to service interruptions.~~

~~For open wire or triplex services and street lighting, all service and street light wires shall have a twelve inch swing clearance to move without obstruction. Any limbs large enough to create pressure on these conductors, such that the conductor is pushed out of normal "sag" configuration, shall be removed back to qualified lateral.~~

~~All vines are to be cut down from all electric poles and guy wires. Vines are to be cleared at least ten feet off the ground and stump chemically treated.~~

~~Special clearances: Down, span, and other guys shall be free of weight, strain, or displacement because of pressure caused by contact with tree parts, particularly of fast growing trees. Vines shall be removed from guys and poles. Working clearance from trees shall be obtained around transformers, cross arms, and risers. In addition, to the amount of separation between conductors and trees specified above, allowance shall be made for wire sag and horizontal displacement due to weather extremes and high winds, maximum of wire sag and sway occurs at span centers. All tree pruning and removal should be done accordingly.~~

~~Poles with switching mechanisms, transformers, or other mechanical equipment for the electric system installed in the right of way or that are not accessible by bucket truck shall be cleared from ground to sky to a minimum ten foot radius.~~

~~Leaning, weakened, or dead trees outside of the clearance requirements, which pose an imminent threat to the adjacent electric equipment, shall be identified by the Contractor and brought to the Duke Forester's attention. The Duke Forester may authorize the removal of such trees on a time and material basis but in the absence of a legal right to remove and excluding an emergency situation, no removal may take place until Contractor has contacted and received approval from the property owner or agent to remove such tree.~~

~~When performing routine circuit line clearing, all unwanted trees twelve inches diameter breast height (DBH) or less with the trunk within ten feet of the conductor shall be removed where permissible by the property owner or Township but in the absence of a legal right to remove, and excluding an emergency situation, no removal may take place until Contractor has contacted and received approval from the property owner or agent to remove such trees. Removal of trees greater than twelve inches DBH must be approved by a Duke Forester prior to beginning the work. Removal of all trees with the trunk more than ten feet from the conductor should be approved by a Duke Energy Forester prior to the beginning the work. In the absence of a legal right to remove, and excluding an emergency situation, a signed permission notice must be obtained from the property owner or their agent prior to removing such trees or brush. Removals of secondary and service wires should not be performed unless there are extenuating circumstances that are approved by the Duke Energy Forester prior to beginning the work. In most cases, on secondary and service wires customers should be informed that they may request the temporary disconnection of the conductor to the customer can then make arrangements for the tree's removal. Contractor shall utilize the most efficient and cost effective methods available to perform the removals including, but not limited to, cutting, mowing, hand-cutting, and chemical applications. All stumps from downed trees shall be treated with herbicides where applicable and possible.~~

(g) Substations

All Duke Energy safety rules shall be observed when entering any substation:

Appropriate Personal Protective Equipment

Minimum Approach Distance

Personal Protective Grounds

Special Precautionary Techniques

Environmental Rules and Regulations

Station Visual Inspection

Substation visual inspections shall be performed once a month. These visual inspections and recorded readings can help indicate the need for maintenance on a piece of equipment, reasons for unplanned outages, the presence of unbalanced or overloaded circuits, and the presence of potentially dangerous situations. Bus structure, circuit breakers, transformers, the control building, and the general yard are specific items that shall be covered under the station visual inspection.

Visual inspections of the bus structure and the equipment mounted in the structure are performed every time the substation is entered. When performing the inspection, items or conditions that appear abnormal should be closely inspected, such as a sudden change in color on the bus structure which could indicate a spot where flashing has occurred or where overheating has occurred. The connection points and lines of a static line shall be visually checked for damage. Insulators, bushings, and arresters are checked for breakage, cracking or

discoloration. Air break, load break or disconnect switches are visually inspected to ensure that they are properly seated if closed and that padlocks are in place and locked. Wave traps, coupling capacitor transformers, potential transformers, fault bus and other equipment mounted on the bus structure shall be checked for signs of overheating, loose connections, vandalism, corrosion, dirt, and lightning strikes. Steel structures are also inspected for signs of excessive rust, cracks, excessive vibration and debris.

Visual inspections on circuit breakers will vary depending on the type/model of the circuit breaker. The overall appearance of the circuit breaker shall be visually checked for anything abnormal such as cracks, chips, or oil leaks. High/low gas pressures and temperatures, air pressure, oil level, counter numbers, elapsed time readings on the compressors, and compressor oil level are all checked and recorded. The semaphore indications shall also be checked to ensure true circuit breaker status.

The overall appearance of the transformer shall be visually checked for anything abnormal such as oil leaks, fans and pumps not operating, and bushings that are cracked, chipped, or leaking. The main tank and load tap changer liquid temperatures and winding temperatures are checked and recorded. Lightning arresters are also checked and the counters are recorded if applicable. The load tap changer compartment and controls are checked for signs of damage and correct automatic operation. The Mulsifyre® system, a high velocity water spray system, and nitrogen supplies are checked and valves are opened to ensure the system is in a state of readiness.

The yard shall be visually inspected for damage and deterioration from vandalism, accidents. The general appearance of the yard shall be checked for excessive vegetation and equipment appearance. The yard lights shall be visually checked and any bulbs that are blown are replaced. The bottom of the perimeter fence shall be checked for excessive height above ground.

Equipment in control buildings shall be visually inspected and readings recorded. An operator shall visually check all relays for targets and records information and resets targets. This person shall also ensure that primary relay and backup relay indicating lights are lit and checks the remainder of indicating lights to ensure they agree with equipment status. The annunciator panel shall be tested to ensure all lamps are operational and alarm cutout switches closed unless tagged. The control panel switches are checked to ensure they are in the proper position. The operator shall also change charts and records date, time, and initials the chart where applicable. Digital fault recorder targets shall be checked and reset as necessary. The fault bus shall be tested to ensure the voltage level is approximately 15 volts. Power station panels shall be checked for tripped breakers or breakers placed in the wrong position. Station power supplies are checked to ensure both the normal and reserve power sources are available and the DC control panels shall be checked to ensure switches are in the proper position. The substation batteries and battery charger shall be visually inspected. Fire extinguishers shall be visually inspected to ensure acceptable pressure in the tank

Infrared Inspection

An infrared scan of substation equipment shall be performed annually. All outdoor substation equipment shall be scanned using suitable infrared detection equipment to check for signs of abnormal heating or below normal expected temperature. Abnormal heating may be caused by high resistance connections, excessive loading, restricted air or oil flow, or deteriorated equipment. Below normal temperatures can be caused by unbalanced loading, restricted air or oil flow, or device malfunction.

Bus conductor, connectors, fittings, fuses, bushings, lightning arresters, switches, transformer case and auxiliary equipment, circuit breaker interrupter tanks, line neutral and static connections and power cable terminations shall be scanned for abnormalities. Control and relay cabinet doors shall be opened to scan circuit breakers, contactors, control wiring, fuses, heaters, relay terminals, and terminal blocks. Station batteries shall be checked for uneven heating, high resistance connections, and contamination losses. The thermography and field repair records shall be reviewed and analyzed to determine cause.

Power Factor Testing

Power factor tests shall be performed on a time period from 2 – 9 years based on station equipment type/size/condition/criticality. Power factor tests establish baseline readings on new equipment for future reference when tests are performed to evaluate the integrity of equipment at later date.

Refer to Exhibit E for power factor intervals.

The guidelines set forth in the Power Factor Test Set instructions are followed. The readings from the Power Factor Test Set shall then be recorded for future assessment or compare readings to evaluate the piece of equipment being tested.

Dissolved Gas Analysis Testing – Transformer and Transformer Load Tap Changer Oil Sampling

A dissolved gas analysis test shall be performed on transformers with a 3-phase rating 7.5 MVA ~ 49.9 MVA once per year. A dissolved gas analysis test shall be performed on transformers with a 3-phase rating 50 MVA and larger twice per year. The dissolved gas analysis determines the gas levels within the insulating oil and overall health of the transformer.

A dissolved gas analysis test shall be performed on transformer load tap changers once per year for GE: LRT200-2 w/fiberglass drum, LRT300 and LRT500, Reinhausen: RMV-A and RMV-II, Westinghouse: UVT. A dissolved gas analysis test shall be performed on transformer load tap changers twice per year for ABB: UZE w/filter, Allis Chalmers: SJ5 w/filter and TLF w/filter, ASEA/Waukesha: UZD w/filter, GE: LRT48 w/filter, LR65 w/filter, LRT65 w/filter, LRT68 w/filter, LRT72 w/filter, LR83 w/filter, LRS83 w/filter, and LRT83 w/filter, McGraw Edison: V2PA, Westinghouse: UNR w/filter, URS w/filter, URT w/filter, and UTS w/filter, also twice per year for ABB: UZE no filter, Allis Chalmers/Siemens: TLB w/filter and TLH-21 w/filter, Allis Chalmers: SJ5 no filter and TLF no filter, ASEA/Waukesha: UZD no filter, Federal Pacific: TC546 w/filter, TC525 w/filter, and TC25E w/filter, GE: LRT200 w/paper drum, LRT48 no filter, LR65 no filter, LRT65 no filter, LRT68 no filter, LRT72 no filter, LR83 no filter, LRS83 no filter, and LRT83 no filter, McGraw Edison: 394

w/filter, 550 w/filter, 550B w/filter, and 550C w/filter, Moloney: T-MB w/filter, TC-MA w/filter, TC-MB w/filter, TC-MC w/filter, Westinghouse: UNR no filter, URS no filter, URT no filter, UTS no filter, and UTT w/filter. A dissolved gas analysis test shall be performed on transformer load tap changers three times per year for Allis Chalmers/Siemans: TLB no filter and TLH-21 no filter, Federal Pacific: TC546 no filter, and TC25E no filter, McGraw Edison: 394 no filter, 550 no filter, 550B no filter, and 550C no filter, Moloney: T-MB no filter, TC-MA no filter, TC-MB no filter, TC-MC no filter, and Westinghouse: UTT no filter. The dissolved gas analysis determines the gas levels within the insulating oil and overall health of the load tap changer.

Circuit Breaker Inspection

A circuit breaker inspection shall be performed every 3 years for all air, vacuum, gas, and oil circuit breakers. The purpose of this inspection is to provide a non-intrusive method of evaluating the circuit breaker to ensure its integrity.

Metal Enclosed Capacitor Assemblies

Metal enclosed capacitor assemblies without unbalanced protection shall be internally inspected each year and every 3 years for metal enclosed capacitor assemblies with unbalanced protection. The capacitors within enclosures shall be inspected to ensure equipment is functioning properly.

Capacitors must be de-energized for a minimum of five minutes before they are grounded. Duke Energy Ohio shall check isolation and check voltage and ground after five minutes. Duke Energy Ohio shall check all electrical connections, check capacitor fuses and replace blown fuses after checking capacitor with capacitor tester and check fuse clips and all ground connections. Duke Energy Ohio shall inspect capacitors for any damage or leaking cases, broken or cracked bushings, and replace if necessary. Duke Energy Ohio shall clean and inspect insulators for damage and repair/replace if necessary. If isolation permits, clean and lubricate disconnect switch and ground disconnect if equipped. Duke Energy Ohio shall clean and inspect neutral pot for damage and repair/replace if necessary and clean and inspect capacitor structure or enclosure for damage and clear isolation and return equipment to service.

Planned Maintenance

Planned Maintenance work (i.e. MAXIMO Work Type "PM") shall be completed and the associated MAXIMO work order closed within the following time interval from the date on which the work order was generated:

<u>PM Frequency/Interval¹</u>	<u>Work Order Should Be Completed Within</u>
1 Week or Less	1 Week
1 Month	Within the calendar month in which work order generated.
3 Months	30 Days
6 Months	60 Days
1 Year	90 Days
3 Years	1 Year
6 Years or Greater	2 Years
Relays (all frequencies)	12 months after the due date in the Aspen relay database.

Note 1: For PM frequencies/intervals that fall between those shown in this table, the next lower interval from this table will apply.

Case No(s). 16-0915-EL-ESS

Summary: Application Application of Duke Energy Ohio, Inc., for Approval of Revised Paragraph (f) of its Programs for Inspection, Maintenance, Repair and Replacement of Distribution and Transmission Lines electronically filed by Dianne Kuhnell on behalf of Duke Energy Ohio, Inc. and Spiller, Amy B. and Watts, Elizabeth H.

**Duke Energy Ohio
Case No. 17-2344-EL-CSS
CACC Fourth Set of Interrogatories
Date Received: April 12, 2018**

CACC-INT-04-028

REQUEST:

Under Duke's vegetation management plan, practices, and procedures that were in effect at the time of its application to modify its vegetation management plan, practices, and procedures, what clearance distance(s) were Duke employees and/or contractors instructed to maintain between Duke Transmission Circuits Nos. 3881, 5483, 5487, 6984, and/or 9482 and trees and other vegetation?

RESPONSE: Objection. This Interrogatory seeks to elicit a narrative response and is thus better suited for deposition. See Generally, *Penn Central Transportation Co. v. Armco Steel Corp.*, 27 Ohio Misc 76 (Montgomery Cty. 1971). Without waiving said objection, to the extent discoverable and in the spirit of discovery, at the time of the application to modify paragraph (f), there were no substantive changes made to Duke's vegetation management plan, practices, and procedures. Changes were only made to clarify and make terms more coherent.

PERSON RESPONSIBLE:

As to objection: Legal

As to response: Ron Adams

Duke Energy Ohio
Case No. 17-2344-EL-CSS
Citizens Against Clear Cutting Request for Production of Documents
Date Received: January 25, 2018

CACC-POD-01-003

REQUEST:

Produce and attach true and accurate copies of all emails sent or received by any employee of Duke Energy Ohio regarding Duke's plan to clear cut vegetation on properties owned by Complainants.

RESPONSE:

Objection. This Document Request seeks privileged and confidential documents that are protected by the attorney work product doctrine or the attorney client privilege. The Document Request also is overly broad and unduly burdensome because it is not limited to the transmission lines at issue in this case. Objecting further, it seeks information that is irrelevant and not likely to lead to the discovery of admissible evidence. Finally, the Document Request is vague and ambiguous as to the "plan" referenced therein, and also misstates the terms and provisions of the Company's Programs for Inspection, Maintenance, Repair and Replacement of Distribution and Transmission Lines, Section (f), as approved by Rule on June 13, 2017. Finally, this Interrogatory is vague and ambiguous as to the meaning of the phrase "clear cut" as such phrase is undefined.

PERSON RESPONSIBLE: Legal

I don't need a book because I will have to memorize the answers so please keep it simple. I can speak to most of this but wanted to make sure I was representing the Veg team appropriately.

Subject: Re: Jim Henning Employee Forum Jan. 30

Will have something to you Monday.

developments/projects your team is working on in 2018? (Line D, Bigbone Pipeline, Phase 2 of East End retaining wall etc.)

• **Sochacki:**

- We're planning about \$230 million in capital investments on our electric distribution system this year.
 - What types of projects are we prioritizing in terms of improving reliability?
 - Which high-visibility projects do you think will receive the attention of our customers and other stakeholders in our communities?
- I've heard some chatter about our desire to evolve the grid from self-healing to self-optimizing. Can you tell us what this means, how this works?

• **Broadhurst:**

- I know we continue to make a lot of changes when it comes to Transmission Vegetation Management – especially in Ohio. And we're hearing a lot of feedback – mostly negative – from a variety of stakeholders.
 - What are we doing differently?
 - Why are we making these changes?
 - How are we mitigating/responding to community and customer concerns about our new policies/direction? (you will need to address the public complaints before PUCO here and recent media attention)
- We have a very favorable investment vehicle in Ohio: the Ohio Transmission Investment Program – or OTIP. How much are we investing in Ohio in 2018? And what are some of the major projects?

• **Riggins:**

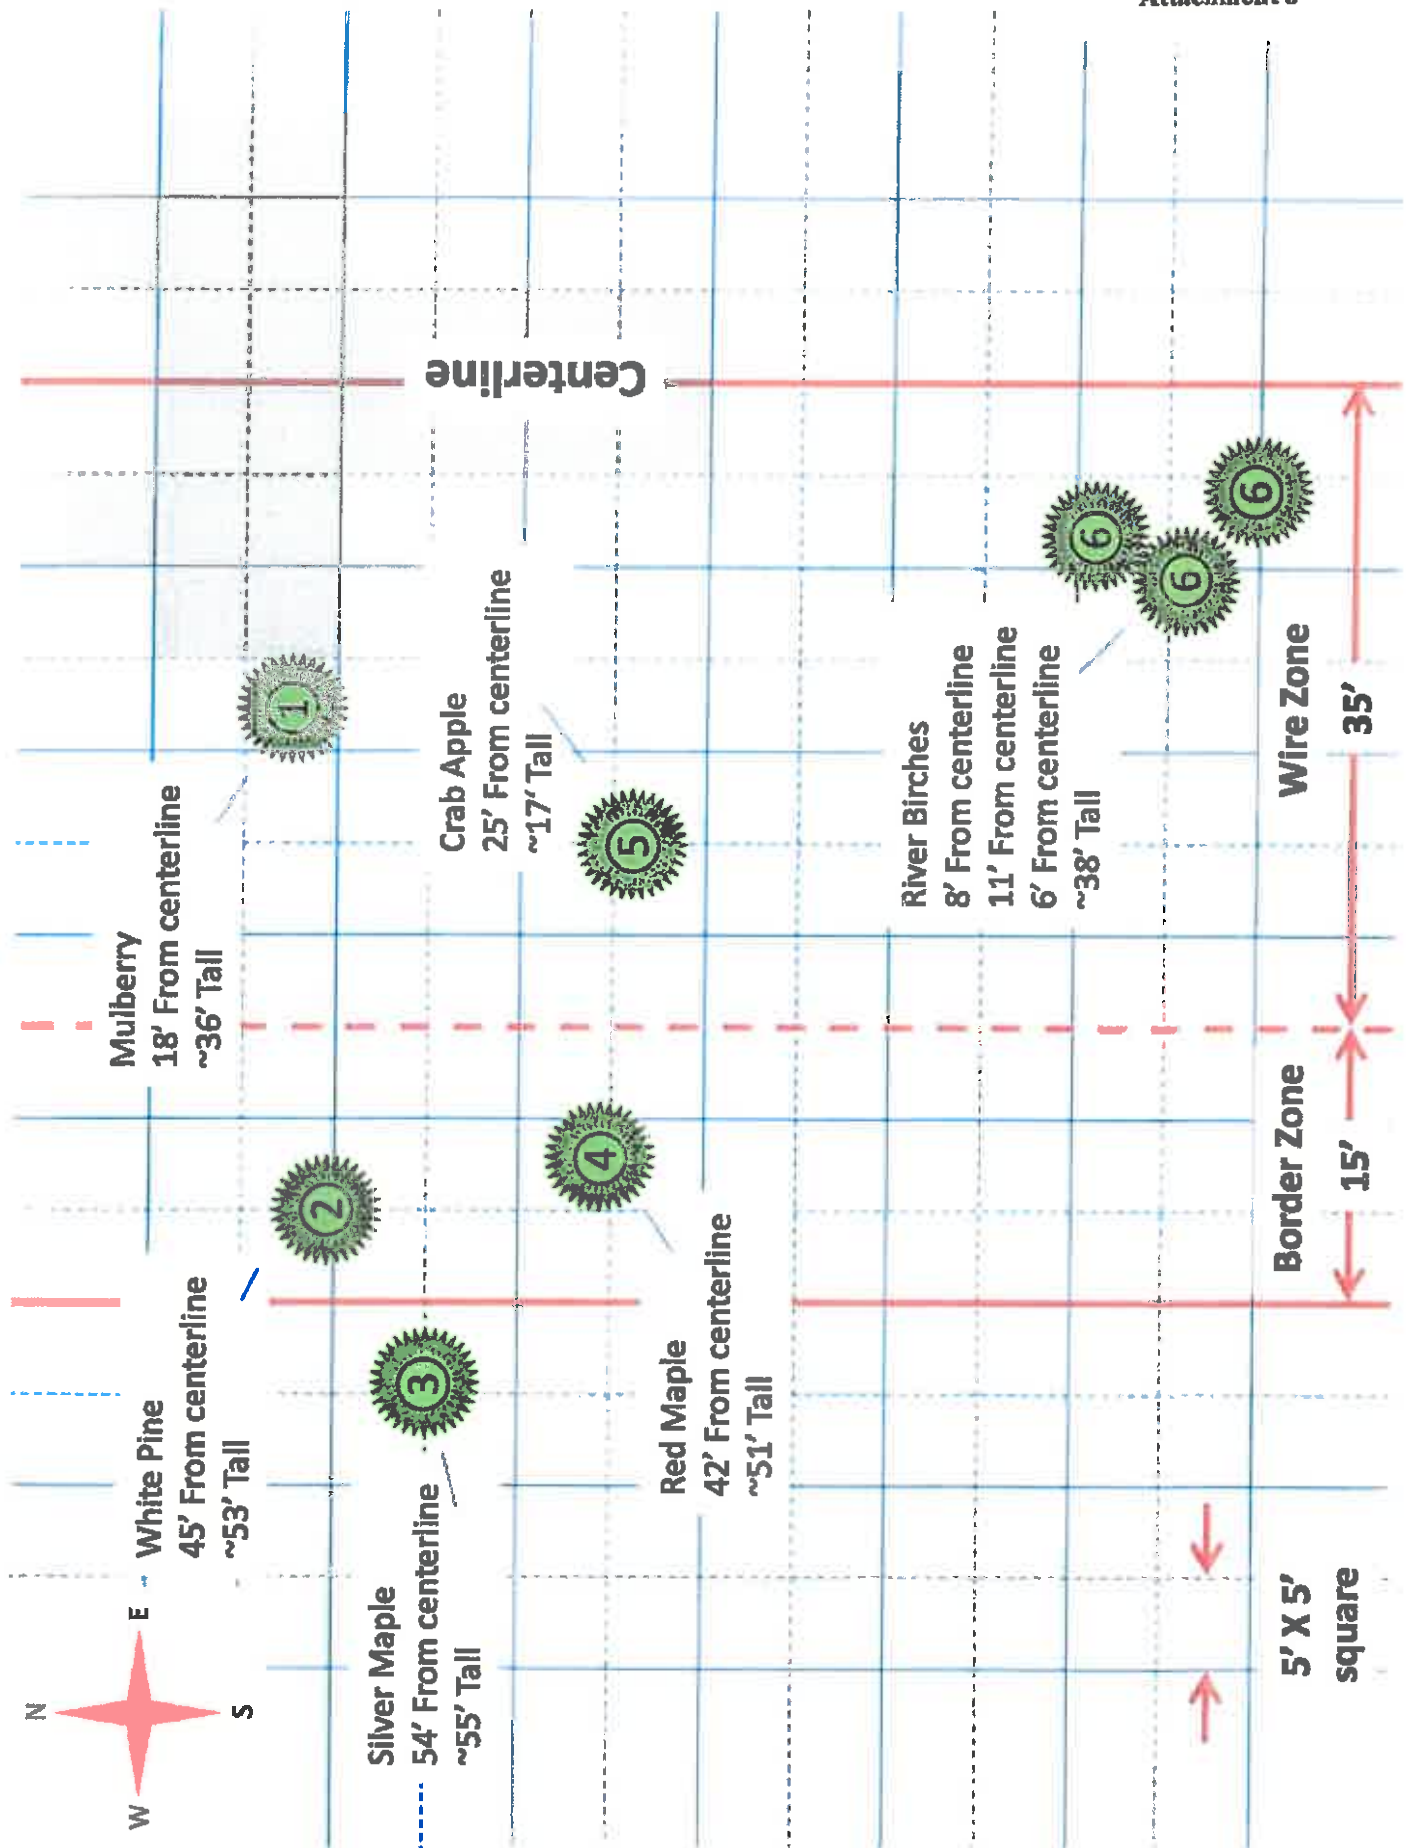

- Will you briefly share some of the projects that are on your plate at East Bend in 2018?
 - Magnitude of the planned outage
 - Coal ash management and environmental projects
- When you look at Duke Energy, our strategy, our Road Ahead – we see a tremendous focus on natural gas. As the leader at the coal-fired East Bend Station:
 - How does this resonate with you?
 - What does it mean to you – personally and professionally?
 - How are you handling the discussion with your employees at EBS?

- How do you feel coal fits into our Road Ahead at Duke Energy?

Thank you again for agreeing to participate.
