As elected officials, I am wondering how you can justify these wind farms that are being planned for the above counties. They are far from green, and you all know it as you are intelligent individuals. They do not pay for themselves! The technology is just not there yet to justify the production of wind farms. I think that there would be many people on board if they knew this was a viable option. Right now the only ones making money are the people that erect them and then quickly sell them and the land owners who own the ground they sit on. The most important reason for not doing this is we are sitting on a karst area and the ecological impact would be catastrophic. Not to mention that we are a flight path for migratory shore birds. Apex has made the statement that if a PILOT was not voted for by the commissioners they would not be responsible for bridge and road repair if they are damaged within the construction process!! How can this be even possible?! If you want to be green then choose nuclear energy which we know works. Please think about the ecological effects and how it could effect not only my generation but our children and grandchildren.
