Subject: Wind and solar projects

We (Ohio, and Ohio lawmakers) need to take California's blackout experience as a real testimony that we are being sold a bill of goods. It will never support itself, cover the cost of taxpayer subsidies, over ride the carbon footprint, save money, or even be green. Because like California it needs gas/coal fired generation backups constantly. I ask what does it save? Solar in Ohio, Michigan plus other states, has limited sun in the winter. Please consider what we are really doing for our environment, and what we are leaving other generations. Feel free to teach out to discuss this topic.
