Why are we spending tax payer dollars on this? EVERY country that has decommissioned their nuclear plants and went towards solar and wind (with coal and natural gas backups) has seen a substantial increase in CO2 emissions. Why are we moving away from nuclear? Nuclear is the safest, cleanest, and most abundant energy source available to us in the 21st century. Solar takes up way more space for a fraction of the power output. This will destroy local farmland in some of the most fertile farmland in West Ohio. All of this is going on as we continue to show commercials about feeding children. Clearly the local residents want nothing to do with this project, it will not create many jobs for the local economy, and is not economically viable for a new age Society.

From the US National Library of Medicine National Institutes of Health "It has been found that RF-EMF can induce changes in central nervous system nerve cells, including neuronal cell apoptosis, changes in the function of the nerve myelin and ion channels; furthermore, RF-EMF act as a stress source in living creatures. The possible biological effects of RF-EMF exposure have not yet been proven, and there are insufficient data on biological hazards to provide a clear answer to possible health risks. Therefore, it is necessary to study the biological response to RF-EMF in consideration of the comprehensive exposure with regard to the use of various devices by individuals." Please take into consideration the area this project is being proposed in. I know of several families with young children that will be surrounded on all sides of their homes. This clearly highlights what kind of company Lightsource bp is that they would sacrifice the health of a community for a few years of profit.
