It does not seem like a very transparent process when we are not allowed to see all questions submitted to an informational meeting, that a “moderator” gets to pick and choose what questions to ask Lightsource BP. Very shady.

Travis Unterbrink

Wow, it is just amazing to see the corruption and greed associated with this process. It appears to me that the collusion even is found within the Ohio Power Siting Board as one of the attorneys for Birch was an employee of the board less than 5 years ago. This may explain why the normal procedures of establishing a industrial power generating facility could easily be circumvented. The lies and deceit is apparent at all levels as our state representative if investigated thoroughly may be found as with House bill 6 receiving contributions from the investors. I hope I'm wrong but the legal headwinds we are facing tell me otherwise. I have already contacted you on the environmental impact through loss of habitat, loss of food for our state. If anyone would actually look at these neighborhoods they would surely be aghast. Do you have one in your neighborhood? Currently less than 1000 feet from my driveway on Breese road is a sign that says high water. Every time it rains more than 1 inch in two hours we have flooding coming off of one of the fields slated for solar panels. With panels and less ground permeability what do you think will happen. Several homes will be in jeopardy of flooding. When the state put up solar panels on the old prison ground inspections after were required after detailed plans were submitted to the EPA, the City of Lima, and county Commissioners No research has ever been done on a project of this scope in a residential setting i.e. loss of tax base due to people fleeing the area property values plummeting. Not to mention the psychological impact of EMF transmission to vulnerable people with mental issues, pacemakers and brain shunts. This project brings no permanent job base to the area and guaranties losses through attrition of construction jobs because of no one wanting to build next to ugly glass and metal structures. No industrial projects can be installed because you have allowed this to happen on agricultural zoned property. Yes lose-lose all the way around for this community. There are brown areas already located next to the refinery that would be suitable for this type of project with electrical infrustrucure that would have been suitable but not considered. Just count on the greed of the farmer to deed over property rights for twice what the can make through farming. The principles of taking care of the land and helping to feed the community is lost on these farmers who have inherited the land from parents and grandparents and have no natural love for the land. I could go on but finally consider how British Petroleum left the refinery and chemical plant when they left Shawnee Township. They skimmed all the profits from the top, neglected maintenance and originally planned to close the facility. They sold the property for pennies on the dollar and left the mess for others to clean up. We do not want them in our community again.

Please take steps to stop this action.

Sincerely,

Don Neff
