

**YELLOWBUD SOLAR, LLC'S OCTOBER 2, 2020 RESPONSES
TO STAFF'S AUGUST 28, 2020 DATA REQUESTS**

**In the Matter of the Application of)
Yellowbud Solar, LLC for a)
Certificate of Environmental) Case No. 20-0972-EL-BGN
Compatibility and Public Need)**

1. Please provide the jurisdictional determination received from the USACE.

Response: The approved JD form is attached.

2. It appears from Table 6-1 of the ecological assessment that there are several category 3 wetlands in the project area, including wetlands W202, W203, W204, and W212. Please be advised that staff would recommend the 120 foot setback be maintained except where fill has been permitted through the US Army Corps of Engineers and/or OEPA for all of these wetlands.

Response: Yellowbud recently completed a Vegetation Index of Biotic Integrity Survey of wetlands W202, W203, and W204. A memorandum from Cardno summarizing the results are attached. This additional effort determined the wetlands to be modified category 2 wetlands. W212 was not further evaluated.

APPROVED JURISDICTIONAL DETERMINATION

Mr. William Risse
Yellowbud Solar, LLC
8400 Normandale Lake Boulevard, Suite 1200
Bloomington, Minnesota 55437

Dear Mr. Risse:

I refer to the jurisdictional determination (JD) report entitled *Regulated Waters Delineation Report, Yellowbud Solar, Pickaway and Ross Counties, Ohio* completed by Cardno and received in this office on July 21, 2020. You have requested an approved JD for the aquatic resources located on the approximate 2,038-acre site. The property is located generally west of Westfall Road, east of State Route 104, north of Williamsport Pike, and south of Yellowbud Creek in Pickaway and Ross Counties, Ohio at approximately 39.496676 latitude, -83.04672 longitude. Your JD request has been assigned the following file number: LRH-2020-562-SCR-Wolf Run. Please reference this number on all future correspondence related to this JD request.

The United States Army Corps of Engineers' (Corps) authority to regulate waters of the United States is based on the definitions and limits of jurisdiction contained in 33 CFR 328, including the amendment to 33 CFR 328.3 (85 Federal Register 22250), and 33 CFR 329. Section 404 of the Clean Water Act (Section 404) requires a Department of the Army (DA) permit be obtained prior to the discharge of dredged or fill material into waters of the United States, including wetlands. Section 10 of the Rivers and Harbors Act of 1899 requires a DA permit be obtained for any work in, on, over or under navigable water.

The Navigable Waters Protection Rule, which became effective on June 22, 2020, was followed in this verification of Section 404 jurisdiction for the features located within the approved JD boundary. A total of 60 wetlands and two (2) streams were delineated within the approved JD area of interest as depicted on the enclosed map titled "Figure 5: Delineation Overview Map and Delineation Set" submitted with the JD report dated May 2020. These aquatic resources are also listed in the enclosed Table 1.

It has been determined that S101 is an (a)(2) perennial tributary that contributes surface water flow directly or indirectly to an (a)(1) water in a typical year, and S201 is an (a)(2) intermittent tributary contributes surface water flow directly or indirectly to an (a)(1) water in a typical year.. It has been determined that W110 directly abuts S101; therefore, W110 is an (a)(4) wetland that

abuts an (a)(1)-(a)(3) water. Therefore, S101, S102, and W110 are subject to regulation under Section 404.

It has been determined that W001-W029, W101-W109, and W201-W221 do not abut a water identified in 33 CFR 328.3(a)(1), (2), or (3), are not inundated by flooding from a water identified in 33 CFR 328.3(a)(1), (2), or (3) in a typical year, are not physically separated from a water identified in 33 CFR 328.3(a)(1), (2), or (3) only by a natural berm, bank, dune, or similar natural feature, and are not physically separated from a water identified in 33 CFR 328.3(a)(1), (2), or (3) only by an artificial dike, barrier, or similar artificial structure. W001-W029, W101-W109, and W201-W221 are not considered waters of the United States per 33 CFR 328.3(b)(1) and are not subject to regulation under Section 404. However, you should contact the Ohio Environmental Protection Agency, Division of Surface Water, at (614) 664-2001 to determine state permit requirements.

This jurisdictional verification is valid for a period of five (5) years from the date of this letter unless new information warrants revision of the delineation prior to the expiration date. This letter contains an approved jurisdictional determination for the subject site. If you object to this determination, you may request an administrative appeal under Corps regulations at 33 CFR Part 331. Enclosed you will find a Notification of Appeal Process (NAP) fact sheet and Request for Appeal (RFA) form. If you request to appeal this determination you must submit a completed RFA form to the Great Lakes and Ohio River Division Office at the following address:

Appeal Review Officer
U.S. Army Corps of Engineers
Great Lakes and Ohio River Division
550 Main Street Room 10-714
Cincinnati, OH 45202-3222
TEL (513) 684-7261; FAX (513) 684-2460

In order for an RFA to be accepted by the Corps, the Corps must determine that it is complete, that it meets the criteria for appeal under 33 CFR Part 331.5, and that it has been received by the Division Office within 60 days of the date of the NAP. Should you decide to submit an RFA form, it must be received at the above address by **November 7, 2020**. **It is not necessary to submit an RFA form to the Division office if you do not object to the determination in this letter.**

The determination included herein has been conducted to identify the location and extent of the aquatic resource boundaries and/or the jurisdictional status of aquatic resources for purposes of the Clean Water Act for the particular site identified in this request. This jurisdictional determination may not be valid for the Wetland Conservation Provisions of the Food Security Act of 1985, as amended. If you or your tenant are United States Department of Agriculture (USDA) program participants, or anticipate participation in USDA programs, you should discuss the applicability of a certified wetland determination with the local USDA service center, prior to starting work.

A copy of this letter will be provided to the Ohio Environmental Protection Agency at Lazarus Government Building, Post Office Box 1049 Columbus, Ohio 43216-3669 and your agent, Mr. Bruce Moreira with Cardno at 3901 Industrial Boulevard, Indianapolis, Indiana 46254. If you have any questions concerning the above, please contact Kayla Adkins of the North Branch at 304-399-5850, by mail at the above address, or by email at kayla.n.adkins@usace.army.mil.

Sincerely,

Laurie Moore

Subject: *Yellowbud Solar Project
Vegetation Index of Biotic Integrity Survey
Ross County, OH*

Dear Mr. Risse:

Cardno completed a Regulated Waters Delineation Report in May 2020 in support of the Yellowbud Solar Project (herein “the Project”) located in Ross County, Ohio (Figure 1). Three delineated wetlands (Wetlands 202, 203, and 204), were categorized in the “gray zone” between a Category 2 and Category 3 wetland (scoring between 60 and 64.9) utilizing the Ohio Rapid Assessment Method 5.0 (ORAM). A Vegetation Index of Biotic Integrity “Floristic Quality” (VIBI-FQ) survey was conducted to clarify the wetland categorizations for Wetlands 202, 203, and 204. The VIBI-FQ provides a more accurate depiction of categorical status of the wetlands by evaluating wetlands for differences in ecological region, landscape position (HGM class), as well as dominant plant communities.

Methods and Summary

Cardno botanists performed the VIBI-FQ survey on September 8 - 9, 2020. Two VIBI-FQ plots were placed within Wetland 202, three VIBI-FQ plots were placed in Wetland 203, and one VIBI-FQ plot was placed in Wetland 204 (Figure 2). Each VIBI-FQ plot was categorized as either a reference plot or an impact plot. The Wetland 204 VIBI-FQ plot served as both the reference and impact plot as the impact location was representative of the overall wetland quality. Reference plots were qualitatively selected by the investigator based on site characteristics and rules for plot location. Impact plots were identified by the project plan set as areas where disturbance may be necessary during construction or operation of the Project.

The standard 20 meter by 50 meter plot layout was utilized across all wetland VIBI-FQ locations except for Wetland 203-Impact Area South which utilized a 10 meter by 100 meter plot layout due to the narrow condition of the wetland. Protocol for the VIBI-FQ survey followed the methodology outlined in the Ohio Environmental Protection Agency’s

“Field Manual for the Vegetation of Biotic Integrity for Wetlands v. 1.5.”. The assessment was performed for permit purposes only and to minimize/avoid potentially high quality wetlands.

Summary of Findings

Cardno conducted a VIBI-FQ survey of Wetlands 202, 203, and 204 on September 8 - 9, 2020. Scores ranged from 32 to 57. All six (6) VIBI-FQ plots were classified as Restorable Wetland Habitat (RWLH), Modified Category 2 habitats. Table 1 depicts the associated VIBI-FQ scores for each evaluated wetland.

Table 1. Yellowbud Solar Project VIBI-FQ Assessment Results

Wetland Name		Class	VIBI- FQ Score	TALU²	Category
Wetland 202	Impact Area	PEM	46	RWLH	Modified Category 2
	Reference Area	PEM	36	RWLH	Modified Category 2
Wetland 203	Impact Area North	PEM/PFO	32	RWLH	Modified Category 2
	Impact Area South	PEM	55	RWLH	Modified Category 2
	Reference Area	PEM	57	RWLH	Modified Category 2
Wetland 204	Impact Area ¹	PEM	36	RWLH	Modified Category 2

¹. Wetland 204 Impact Area exhibits ecological function representative of the entire Wetland.

². Tiered Aquatic Life Uses (TALU) for wetlands and equates these uses to wetland regulatory categories.

a) RWLH : Restorable Wetland Habitat

RWLH wetlands are characterized as degraded but have a reasonable potential for regaining the capability of supporting and maintaining a balanced, integrated, adaptive community of vascular plants having a species composition, diversity, and functional organization (Mack, J. J. and M. Micacchion. 2007). Ohio Administrative Code Rule 3745-1-54(C) states that wetlands that are assigned to Category 2 constitute the broad middle category that "...support moderate wildlife habitat, or hydrological or recreational functions," but also include "...wetlands which are degraded but have a reasonable potential for reestablishing lost wetland functions" creating an implied fourth category of wetlands (modified Category 2 wetlands). Modified Category 2 wetlands include wetlands in "fair" ecological condition (Micacchion, M. and B. Gara. 2008).

Recommendations

Wetlands 202, 203, and 204 were originally categorized using the ORAM 5.0, a level 2 assessment, and scored within the gray zone between a Category 2 and Category 3 wetland. The VIBI-FQ, a level 3 assessment, determined that all three wetlands are modified Category 2 wetlands and should not be considered Category 3 wetlands. Based on the species composition, diversity, and functional organization, Cardno botanists believe the VIBI-FQ data as depicted in Table 1 reflects the appropriate Categorization for Wetlands 202, 203, and 204.

While this report represents Cardno's best professional judgment based on our knowledge and experience, it is important to note that the Ohio EPA has final discretionary authority over isolated 'waters of the State' including all wetlands and their ultimate habitat categorization.

Thank you for this opportunity to provide wetland consultation in support of this Project. Please contact me if you have any questions or concerns regarding these findings or recommendations.

Sincerely,

A handwritten signature in blue ink that reads "Cori Jansing".

**In the Matter of the Application of)
Yellowbud Solar, LLC for a Certificate)
of Environmental Compatibility and)
Public Need)**

Case No. 20-0972-EL-BGN)

**YELLOWBUD SOLAR, LLC'S SEPTEMBER 28, 2020 RESPONSES
TO STAFF'S SEPTEMBER 21, 2020 DATA REQUESTS**

1. On page 30 of the application, it is stated that: "The estimated cost of the Facility is not anticipated to be substantially different from other Facilities completed by the Applicant." Can you please give some examples of other solar facilities developed by Geronimo and their costs? This information can be considered confidential.

Response: Prairie Wolf Solar, LLC, a subsidiary of Geronimo Energy, A National Grid Company, is currently constructing the 200 MW Prairie Wolf Solar project in Coles County, Illinois. While costs vary from state to state due to various factors, owing to their similarity in size and scope, Geronimo scaled costs from the Prairie Wolf Project to estimate the costs per kW for construction for the Yellowbud Solar Project for purposes of Yellowbud's permit application. Thus, the costs provided for Yellowbud can be approximately scaled to that of a 200 MW project. Geronimo considers the detailed costs from the Prairie Wolf project to be confidential in nature.

States, with similar Midwestern climates to that of Yellowbud, where Geronimo is actively constructing solar projects, or has solar projects in operation include Minnesota and Michigan. The costs per kW of projects in Minnesota and Michigan in many cases exceeded that of Yellowbud, due to economies of scale of Yellowbud as compared to those projects. However, Geronimo drew on the experience from the procurement of equipment, construction, and operation of these projects to better inform the costs associated with Yellowbud.

2. Does Geronimo intend to seek governmental funding or incentives, such as tax abatements, investment tax credits, or production tax credits?

Response: Yellowbud Solar plans to pursue the IRS Solar Investment Tax Credit for the Project. Yellowbud will consider other potential beneficial tax provisions that may apply to the project as available.

3. Can Geronimo provide an estimate of which materials and equipment used for construction and maintenance of the facility will be purchased from companies located in Ohio?

Response: At this time, Yellowbud cannot estimate the sourcing of equipment from any one location for construction and maintenance of the Facility. Negotiations with vendors for equipment are ongoing, and information regarding panel sourcing could impact these negotiations until an agreement is reached. Yellowbud will continue to monitor market

conditions to procure equipment at the best available cost on the open market. Additional information has been provided in question 4, below.

4. Please provide the inputs from the “Project Data” section of the JEDI model that was used to evaluate the economic impact of this project. A screenshot of this information will do.

Response: Table 5 of Exhibit K provides the same data that is listed in the “Project Data” section of the JEDI model for Project Expenditures. This has been submitted under confidential seal as part of Yellowbud’s permit application.

Snips of statewide shares, local tax, and wage information are provided in the screenshots of the Project Data sheet below. As the remaining information can be found in table 5 of exhibit K, which contains confidential information, Yellowbud redacted the monetary information from these screenshots.

Yellowbud conservatively assumed for purposes of its application that all construction materials would be procured from out of state and updated the statewide share in the Project Data appropriately. Yellowbud continues to explore procurement of materials within the state of Ohio, dependent on market considerations and negotiations with manufacturers. Due to uncertainty of sourcing, Yellowbud did not want to overestimate local impacts to statewide share. Yellowbud assumed that materials and technicians for operations and maintenance of the Project would be procured from within state. Services for O&M were assumed to be approximately 60% in state, as some special services may require specialized labor from the surrounding region.

**YELLOWBUD SOLAR, LLC'S SEPTEMBER 28, 2020 RESPONSES
TO STAFF'S AUGUST 26, 2020 DATA REQUESTS**

**In the Matter of the Application of)
Yellowbud Solar, LLC for a)
Certificate of Environmental) Case No. 20-0972-EL-BGN
Compatibility and Public Need)**

1. Has the applicant initiated coordination with OEPA and USACE for wetland and stream impact permitting? If yes, please provide a status update on permitting.

Response: Yellowbud recognizes that wetland permitting will be necessary for the Project. Yellowbud has received a jurisdictional determination from the United States Army Corps of Engineers (USACE) for the Project, which identifies USACE jurisdictional waters within the Project Area. Based on the preliminary facility layout, Yellowbud anticipates that all wetland impacts can be permitted under either state or federal General Permits, dependent on jurisdiction. Wetland permitting will be re-evaluated upon development of the final facility layout to ensure compliance with state and federal law. Yellowbud will coordinate with the applicable agency as necessary to implement the necessary permits ahead of any impacts to those resources.

2. The ODNR Rainwater and Land Development Manual recommends a 120 ft. minimum setback to category 3 wetlands. Staff would likely recommend that the applicant maintain this minimum setback except where fill has been permitted through the US Army Corps of Engineers and/or OEPA. Would the Applicant be willing to commit to this setback? If not, please explain if adhering to this setback would impact the viability of the project.

Response: The wetland delineation process identified a single type 3 wetland within the Project Area. This wetland is set back more than 120 feet from the Project within a forested area that will be left intact during construction and operation of the Facility. Yellowbud will maintain a setback of 120 feet from this type 3 wetland. A shapefile of this wetland has been provided to OPSB staff.

**YELLOWBUD SOLAR, LLC'S NOVEMBER 13, 2020 RESPONSES
TO STAFF'S OCTOBER 16, 2020 DATA REQUEST**

1. Please provide a large-scale aerial map that depicts all inhabited residential dwellings adjacent to the project area that have a direct, unobstructed line-of-sight view to the project boundaries. Identify on the map which receptors are participating and non-participating, as well as any nearby roads and highways.

Response: The attached map accounts for topography and screening elements such as structures and vegetation that at least partially screen views of the proposed Yellowbud Solar Project. This analysis was based on the existing conditions of the area surrounding the Project and no assumptions were made regarding future land use or screening measures.

Case No. 20-0972-EL-BGN

**YELLOWBUD SOLAR, LLC'S NOVEMBER 13, 2020 RESPONSES
TO STAFF'S NOVEMBER 2, 2020 DATA REQUEST**

1. Please explain what possible mitigation measures Yellowbud Solar will employ for well locations, as mentioned on page 52 of the application.

Response: Yellowbud will continue to work closely with landowners to ensure that wells are identified across the site. All wells identified will be marked on final construction drawings. For wells located near residences, it is anticipated that no additional mitigation other than avoidance is necessary, as panels and associated construction equipment are significantly set back from those well locations. For any wells identified that will be impacted by construction or operation of the facility, the wells would be decommissioned prior to impacts to the area. The wells would be cut and capped, and any necessary documentation would be completed per local and state law.

2. Please explain how Yellowbud Solar will, during the detailed engineering phase, minimize any potential damage from high wind velocities by proper structural design of the project support equipment at sufficient depths based on the site-specific soil conditions to preclude any adverse influence from high wind velocities.

Response: Yellowbud has completed test borings of the site, previously provided with the Certificate Application as Exhibit C (Geotechnical Report), to determine overall suitability and anticipated range in pile depths for the Project (generally between 10 and 15 feet). Prior to construction, if deemed necessary, Yellowbud will complete further geotechnical evaluation and pull-testing. Pull testing evaluates the lateral and vertical loading to identify soils strength and the pile depth necessary to withstand high wind events. Final geotechnical borings and further pile testing, if required, will support a site specific structural design analysis that incorporates specific wind, snow, seismic, frost and corrosion inputs that will be utilized to complete the engineering requirements and pile design criteria.

3. Please indicate any wind loading precautions or wind equipment ratings that will be included in the final project design.

Response: Yellowbud's final project design will identify the necessary pile type and pile depth across the Project Area to ensure that site specific structural loading requirements and inputs (wind, snow, seismic, frost, and corrosion) are accounted for.

Public Need**)
Case No. 20-0972-EL-BGN
)

**YELLOWBUD SOLAR, LLC'S NOVEMBER 13, 2020 RESPONSES
TO STAFF'S OCTOBER 16, 2020 DATA REQUEST**

1. How many parcels in agricultural district land would be taken out of service for the life of the project?

Response: Yellowbud Solar Project components are proposed on eight parcels that have been identified as agricultural district land.

2. What is the estimated amount of solid waste that will be generated by the construction of the project in cubic feet, yards or meters?

Response: Construction activities will vary from month to month, and waste generation varies to some degree from project to project. It is anticipated that the Project will generate approximately 400 cubic yards of waste per month during construction. The Project is anticipated to generate approximately 4,800 cubic yards of solid waste over the period of construction.

3. Regarding the decommissioning schedule, Yellowbud Solar has indicated on page 37 of the Application, that decommissioning activities may last approximately 12 to 18 months after the useful life of the facility. Please explain what decommissioning activities would occur after the twelfth month.

Response: Site restoration activities are dependent on weather conditions and site-specific factors. Sometimes these conditions may lead to ongoing re-vegetation and restoration following the removal of the facility components for a period extending to approximately 18 months. It is anticipated that most facility components can be removed within 12 months, but restoration activities may be necessary for a longer period.

4. Have the solar panels under consideration by Yellowbud Solar passed the US EPA's Toxicity Characteristic Leaching Procedure (TCLP) test?

Response: Vendors under consideration for the project have historically certified their modules in compliance with the EPA TCLP, and expect to continue to do so once the modules under consideration begin serial production.

5. According to p. 3 of the Decommissioning Plan, "waste materials that hold no value will be recycled or disposed of via a licensed solid waste disposal facility." Will the solar panels be checked for toxicity or hazardous materials (e.g. RCRA listing), or acceptability of the solid waste facility prior to decommissioning?

Response: As noted above, the panels under consideration have historically been in compliance with the US EPA's TCLP test, and meet the US EPA definition of non-hazardous waste. Should the panels be landfilled, Yellowbud would ensure that they meet all disposal requirements related to the panels and would work with the selected disposal facility to ensure compliance. However, the panels are still anticipated to hold value at the end of the Project's life. Many solar panel manufacturers either have programs or are developing programs to accept panels back to their facility to recycle and reuse most of the components. Various recycling programs are under development that are likely to accept panels at the end of the Project's life.
