I live a couple miles from the proposed industrial solar. This is in my township and it violates our zoning rules. We are zoned agriculture and solar is not agriculture. They call it a Solar Farm but it's Industrial Solar. I disagree with every aspect from the production of panels in China because they can't be produced in America and meet EPA standards. It is also wrong to subsidize these panels with Americans tax dollars because they are not viable on their own. We also don't know the environmental impact of these panels on a mass scale. These solar panels are not producing electricity for the local community. The people who the electric is going to should put the panels in their backyard. I believe it would be much more profitable for everyone to use nuclear power. Nuclear power is carbon neutral if that is what people are worried about.

Thank you Logan Kellerman
