Good afternoon on another rainy cloudy day in Northwest Ohio. Mr. Cross spoke in Hancock County last evening and mentioned the weather in NW Ohio twice. Once stating rain clouds seem to hang out a while here and also about the beautiful weather in the Carolinas.

Can you please explain to me the sense in putting industrial solar panels on good farm ground where the sun only shines (and many times partially) only 162 days a year?

This is a serious question - if the developers get their quick money and sell and the panels are not profitable, I need to know who is responsible for the clean up assuming there is no way to recycle them so the decommission bond is worthless.

Why are they taking farm producing land for a partial year of sun?

Can you tell me why you would even consider approving this?

Thank you

Pamela Bibler
