Subject: comment for 20-1362-EL-BGN
Date: Monday, October 25, 2021 7:29:18 AM

Dear OPSB

The original application had a description of up to 144 megawatts which is a scientific factual description which is a distribution of all values between 0 megawatts and 144 megawatts. The non scientific factual description of 144 megawatts is fraud. To use the 144 megawatts to calculate a cost per kilowatt-hour is therefore also fraud. The value of the project is determined by the application response to meet the requirements of Section 4906-4-03 that the application include the annual capacity factor. The application states the project would generate 315,360 megawatt-hours to 353,203 megawatt-hours on an annual basis. Dividing these by hours in a year yields 36.00 megawatts to 40.32 megawatts. These megawatts are the scientific factual megawatts for the project. Using these yields a scientific factual cost per kilowatt-hour of about \$4,000 not the stated cost per kilowatt-hour of about \$1,000. The scientific factual megawatts are less than 50 megawatts and the OPSB has no jurisdiction.

Taxpayers and electric energy consumers deserve to have a clear justification for why non scientific facts are used. This justification should be documented under the Case Documents.

Sincerely,
Dennis Schaefer
