I. INTRODUCTION

Applicants Moraine Wind LLC, Rugby Wind LLC, Elm Creek II Wind LLC, Barton Windpower 1, and Buffalo Ridge II Wind LLC and/or its parent company, Avangrid Renewables, LLC, (collectively, the Applicants) submitted applications to obtain certification as renewable

energy (REN) resource generating facilities in Ohio (Applications).¹ In order to obtain REN certification, an applicant must demonstrate that the facility is a qualifying renewable energy resources, has been placed-in-service on or after January 1, 1998, and the energy produced at the facility is “deliverable into this state,” pursuant to R.C. 4928.64(B)(3) and Ohio Adm.Code 4901:1-40-01(F) and 4901:1-40-04. For out-of-state facilities, the Public Utilities Commission of Ohio (Commission) has historically applied a deliverability test, which was first established in *In the Matter of Koda Energy LLC* (the *Koda Test*).² The *Koda Test* relies on “a demonstration of delivery via a powerflow study and/or deliverability study...although not to the extent of requiring signed contracts.”³

On August 20, 2021, Staff issued Staff Reports in each of the above-captioned cases, finding that the facilities satisfied the three criteria of Ohio law. More specifically, the Staff, pursuant to the *Koda Test*, concluded that electricity from each facility is physically deliverable into Ohio.⁴ As such, pursuant to R.C. 4928.64(B)(3) and Ohio Adm.Code 4901:1-40-01(F) and

¹ See *In the Matter of The Application of Moraine Wind LLC for Certification as an Eligible Ohio Renewable Energy Resource Generating Facility*, Case No. 21-516-EL-REN, Application (Apr. 30, 2021) (Moraine Application); *In the Matter of The Application of Rugby Wind LLC for Certification as an Eligible Ohio Renewable Energy Resource Generating Facility*, Case No. 21-517-EL-REN, Application (Apr. 30, 2021) (Rugby Application); *In the Matter of the Application of Elm Creek II for Certification as an Eligible Ohio Renewable Energy Resource Generating Facility*, Case No. 21-0531-EL-REN, Application (May 3, 2021) (Elm Creek Application); *In the Matter of The Application of Buffalo Ridge II for Certification as an Eligible Ohio Renewable Energy Resource Generating Facility*, Case No. 21-532-EL-REN, Application (May 3, 2021) (Buffalo Ridge Application); and *In the Matter of The Application of Barton Windpower 1 for Certification as an Eligible Ohio Renewable Energy Resource Generating Facility*, Case No. 21-544-EL-REN, Application (May 4, 2021) (Barton Application).

² *In the Matter of the Application of Koda Energy LLC for Certification as an Eligible Ohio Renewable Energy Resource Generating Facility*, Case No. 09-0555-EL-REN (*Koda*), Finding and Order (Mar. 23, 2011). CSG’s Motion incorrectly identifies *Koda* as Case No. 05-0555-EL-REN.

³ *In the Matter of the Commission’s Review of its Rules for Energy Efficiency Programs Contained in Chapter 4901:1-39 of the Ohio Administrative Code*, Case Nos. 12-2156-EL-ORD, *et al.*, Finding and Order at ¶ 181 (Dec. 19, 2018).

⁴ See, e.g., Moraine Application, Staff Report at 2 (Aug. 20, 2021) (Moraine Staff Report); Rugby Application, Staff Report at 2 (Aug. 20, 2021) (Rugby Staff Report); Elm Creek Application, Staff Report at 2 (Aug. 20, 2021) (Elm Creek Staff Report); Buffalo Ridge Application, Staff Report at 2 (Aug. 20, 2021) (Buffalo Ridge Staff Report); Barton Application, Staff Report at 2 (Aug. 20, 2021) (Barton Staff Report).

4901:1-40-04, Staff recommended that the Commission approve the Applications for REN certification in each of the above-captioned cases.

Blue Delta Energy, LLC (Blue Delta) has reviewed the Applications submitted and the filed Staff Reports and supports Staff's continued use of the *Koda* Test. The *Koda* Test is a reasonable and accurate means of tracking physical deliverability, and demonstrates that the facilities produce energy deliverable into the state. As long as the Commission upholds its reasonable and longstanding precedent and applies the *Koda* Test, it is indisputable, pursuant to the Staff Reports, that each facility is deliverable into the state pursuant to R.C. 4928.64(B)(3) and Ohio Adm.Code 4901:1-40-01(F) and 4901:1-40-04, and should be granted REN certification.

Despite the Commission's longstanding precedent, on May 7, 2021, Carbon Solutions Group, LLC (CSG) simultaneously sought to intervene in all five of the REN certification Applications to challenge the use of the *Koda* Test.⁵ For the purpose of enhancing its profits and that of its clients, CSG seeks to challenge Commission precedent regarding the certification under Ohio Adm.Code 4901:1-40-04(D) of numerous renewable energy resource generating facilities in Ohio, including the five Applications in the above-captioned cases.⁶ CSG's proposal would arbitrarily deny certification to a number of out-of-state applicants, while allowing CSG's facilities or those of its clients to benefit by limiting the number of renewable energy credits (RECs)

⁵ See Motion to Intervene, Motion to Consolidate, and Motion to Establish a Procedural Schedule of Carbon Solutions Group, LLC (May 7, 2021) (CSG Motion).

⁶ *Id.*; see also *In the Matter of The Application of Wessington Wind Farm for Certification as an Eligible Ohio Renewable Energy Resource Generating Facility*, Case No. 21-110-EL-REN, Motion for Leave to Intervene Out of Time, Motion to Consolidate, and Motion to Establish a Procedural Schedule of Carbon Solutions Group, LLC (Apr. 7, 2021); *In the Matter of The Application of Buckeye Wind Energy Center for Certification as an Eligible Ohio Renewable Energy Resource Generating Facility*, Case No. 21-163-EL-REN, Motion to Intervene, Motion to Consolidate, and Motion to Establish a Procedural Schedule of Carbon Solutions Group, LLC (Apr. 7, 2021); *In the Matter of The Application of Marshall Wind Farm for Certification as an Eligible Ohio Renewable Energy Resource Generating Facility*, Case No. 21-162-EL-REN, Motion to Intervene, Motion to Consolidate, and Motion to Establish a Procedural Schedule of Carbon Solutions Group, LLC (Apr. 7, 2021).

available in Ohio and therefore increasing the prices of their RECs. This would give CSG unreasonable market power at the expense of its competitors and Ohio load serving entities, with these costs eventually being passed through to Ohio electric customers.

In response to CSG's tactics, Blue Delta intervened in each of the above-captioned cases to protect its own interests and the interests of its clients by supporting the Commission's longstanding *Koda* Test. Blue Delta provides a wide range of sustainability and clean energy solutions, which includes assisting and representing clients, including out-of-state clients, in obtaining REN certifications in Ohio. In the majority of applications with which Blue Delta has been integrally involved in, including one of the applications at issue in this proceeding, Blue Delta has obtained the necessary transmission studies for their clients establishing deliverability under the Commission's existing precedent.

Pursuant to the Commission's October 19, 2021 Entry in the above-captioned cases, Blue Delta hereby submits the following comments regarding Staff's recommendations for approval of the Applications and Staff's use of the *Koda* test to determine physical deliverability to Ohio.⁷ Blue Delta jointly retained and is hereby co-sponsoring the attached expert report with the Applicants, which was produced by GDS Associates, Inc., a utility engineering firm, to assist with an analysis of the physical deliverability to Ohio of the five facilities seeking certification in this proceeding (Expert Report). Blue Delta has attached the Expert Report hereto as Attachment A.⁸ The Expert Report thoroughly analyzes the history of the *Koda* Test, its relation to industry-wide standards and regulations, the justification behind the methodology, and the application of the

⁷ Entry at ¶ 7 (Oct. 19, 2021).

⁸ See generally Attachment A, Expert Report of GDS Associates, Inc. (Nov. 18, 2021) (Expert Report).

Koda Test to the five facilities, as well as the challenges raised by CSG. Blue Delta adopts and incorporates herein the findings and conclusions set forth in the Expert Report.

II. COMMENTS

A. Staff Reports Correctly Determine that the Applicants Satisfy the Requirements for Certification Under Ohio Law.

Pursuant to R.C. 4928.64 and 4928.645 and Ohio Adm.Code 4901:1-40-04, to be certified as an eligible Ohio renewable energy resource generating facility, a facility must be a qualified renewable energy resource, must be placed-in-service on or after January 1, 1998, and must either be located in Ohio or demonstrate that the energy produced from the facility is deliverable into the state of Ohio. As noted by the Staff Reports, all five facilities clearly meet the definition of a “renewable energy resource” under R.C. 4928.01(A)(37) as the facilities are all wind energy resources.⁹ Additionally, the facilities satisfy R.C. 4928.64(A)(1) as all of the facilities were placed-in-service after January 1, 1998.¹⁰ Lastly, as explained in the Staff Reports and further below, all of the five out-of-state facilities satisfy the third criterion regarding deliverability.

To determine whether a facility can satisfy the deliverability statutory requirement, the Commission promulgated administrative rules stating that electricity from a facility outside of Ohio or a contiguous state is deliverable into the state of Ohio upon “a demonstration that the electricity is *physically* deliverable to the state.”¹¹ The Commission explained that in order to review certification applications, “Staff began an investigation into defining a process and approach that could be employed to demonstrate deliverability for a facility located outside of

⁹ Moraine Staff Report at 3; Rugby Staff Report at 3; Elm Creek Staff Report at 3; Buffalo Ridge Staff Report at 3; Barton Staff Report at 3.

¹⁰ *Id.*

¹¹ Ohio Adm.Code 4901:1-40-04(F) (emphasis added).

Ohio or a contiguous state.”¹² Staff developed a test based on a distribution factor (DFAX) or power flow study.¹³ In applying this test, Staff required that the DFAX study demonstrate “the absolute value of the impact on a transmission line in Ohio must be greater than 5% and greater than 1 MW.”¹⁴ Subsequently, in reviewing the test created by Staff, the Commission determined that Staff’s methodology and deliverability criteria “are reasonable and should be adopted.”¹⁵ The test has become to be known as the *Koda* Test, named after the first proceeding in which it was applied.¹⁶

The practical considerations behind the *Koda* Test demonstrate that the *Koda* Test is an accurate and reasonable method of determining physical deliverability. As Staff noted when originally proposing the *Koda* Test, and as the Commission restated in its Order adopting the *Koda* Test, “it is impossible to physically track energy from a specific generating facility to a specific load location.”¹⁷ As such, to determine the *physical* deliverability of energy pursuant to Ohio Adm.Code 4901:1-40-04(F), Commission Staff must rely on modeling.

The *Koda* Test allows Staff to evaluate that modeling and apply its established criteria. Staff uses DFAX studies performed by PJM Interconnection, L.L.C. (PJM) for the modeling. In the above-captioned cases, the Applicants submitted to Staff “a DFAX power flow study which was performed by PJM” for each facility.¹⁸ When performing the studies, PJM uses “a computer

¹⁷ *Id.* at ¶ 7; *Id.*, Staff Review and Recommendation at 5.

¹⁸ See, e.g., Moraine Staff Report at 2; Rugby Staff Report at 2; Elm Creek Staff Report at 2; Buffalo Ridge Staff Report at 2; Barton Staff Report at 2.

model of the transmission systems that measures the change in power flows across a flowgate due to a change in generation, if any significant impact was evident from the study.”¹⁹ PJM evaluates each facility’s impact on power flows from injecting energy across approximately 3,000 electric system transmission facilities in Ohio and the surrounding states.²⁰

Staff applies a five percent DFAX minimum requirement to the resulting models, recommending a denial of REN certification to facilities that are below five percent as they have a minimal impact on the transmission system.²¹ Other regional transmission organizations (RTO) establish a lower minimal DFAX requirement when considering certification.²²

The Staff also applies a 1 MW minimum threshold to facilities to ensure a facility’s impact on a transmission line in Ohio. This minimal requirement denies certification to facilities that have a higher DFAX impact but a limited megawatt total impact.²³ In this way, the *Koda* Test mirrors, and is in some ways superior to, widely-accepted, nationwide industry standards.

For example, as explained in the Expert Report, the North American Electric Reliability Corporation (NERC) and Federal Energy Regulatory Commission (FERC) have promulgated rules, regulations, and standards based on the results of DFAX studies. When evaluating interchange transactions between balancing authorities and for calculating the ability to move power between locations, NERC employs DFAX studies.²⁴ NERC also recommends the same

²² *Id.*

²³ Attachment A, Expert Report at ¶ 4.2.

²⁴ Attachment A, Expert Report at ¶¶ 5.2.1, *citing* NERC Standard MOD-030-3, R2.1.1, R2.1.2, and R2.1.4.1, available at <https://www.nerc.com/files/MOD-030-3.pdf> (Nov. 13, 2014).

studies for analyzing real-time loading on the bulk electric system.²⁵ FERC has supported NERC's use of DFAX, as well as supported the use of DFAX studies to evaluate expansion planning cost allocation.²⁶

RTOs such as PJM and the Midcontinent Independent System Operator, Inc. (MISO) also have promulgated rules, regulations, and standards based on DFAX studies. Under their Joint Operating Agreement, RTOs employ DFAX studies to examine the impact of proposed facilities on their transmission networks.²⁷ Both RTOs use DFAX studies to evaluate interconnection requests. Both RTOs use DFAX studies to calculate available transfer capability.²⁸

The practical considerations, history, and application of the *Koda* Test demonstrate the *Koda* Test's efficacy. By allowing the Commission to analyze the physical deliverability of facilities, the *Koda* Test serves as the most effective alternative to actually tracking the flow of electricity, which is impossible. As such, the *Koda* Test, and the DFAX studies that the *Koda* Test relies on, represent the best method of tracking physical deliverability as required by Ohio Adm.Code 4901:1-40-04(F).

After applying the *Koda* Test to all five facilities, the Staff Reports correctly concluded that all of the five out-of-state facilities satisfy the third criterion regarding deliverability as the facilities have a greater than five percent DFAX value and are greater than 1 MW.²⁹

B. Opposition to the Applications or Use of the *Koda* Test to Determine Deliverability Should be Rejected.

To date, there does not seem to be any objections or opposition to the determination by Staff that the facilities have satisfied the first two criteria of Ohio law. There does seem to be, however, opposition surround the third criterion and whether the facilities have satisfied the deliverability requirement in bedded in Ohio law. To this end, one entity, CSG, appears to be challenging the test adopted by the Commission to determine satisfaction of the deliverability requirement, and has argued for an alternate test or methodology to determine deliverability be used instead. For the reasons stated below, such challenges should be rejected by the Commission.

CSG asserts that the *Koda* Test improperly looks at “hypothetical deliverability.”³⁰ However, as Staff and the Commission have both noted, it is not possible to actually track the flow of individual units of energy from one point to another. As such, the type of extensive modeling required by the *Koda* Test allows the Commission to more accurately determine physical deliverability than other methods.

The Commission and Staff have routinely applied the *Koda* Test to REN applications over the past decade. But, CSG has neither challenged the *Koda* Test nor raised its policy arguments during that ten-year period in which the *Koda* Test has been applied. CSG has attempted to argue that applicants can render the deliverability requirement “meaningless” “[by] massaging the inputs.”³¹ But CSG’s claims are baseless. As explained in the expert report drafted by GDS Associates, Inc., the *Koda* Test does not serve as a “rubber stamp” for certifying REN facilities.³² The applicants do not have the ability to somehow alter the power flow studies, as the RTO, not

³⁰ CSG Motion at 4.

³¹ *Id.*

³² See Attachment A, Expert Report at ¶ 3.1.

the applicant, performs the power flow studies.³³ In fact, the Commission regularly uses the *Koda* Test to deny REN certification applications for failing to demonstrate deliverability.³⁴ This includes the applicant in *Koda* itself, the first time the *Koda* Test was adopted.³⁵

CSG also raises arguments against the *Koda* Test that the Commission has previously considered, but rejected. For example, CSG argues that the Commission should require a demonstration of “a contract path of electricity,” because deliverability pursuant to R.C. 4928.64 “has both a physical and financial dimension.”³⁶ In two separate rulemaking proceedings regarding Ohio Adm.Code 4901:1-40, the Commission rejected the idea that physical deliverability requires a showing of financial deliverability. Stakeholders argued that the test “should focus on a potential transmission contract path rather than a physical path since electricity flows along the path of least resistance, whereas purchase power contracts regularly assume a ‘contract path’ that is counter to the physical flow of electrons.”³⁷ When rejecting this proposal in those rulemakings, the Commission stated that “a demonstration of delivery via a power flow study...should be necessary, although not to the extent of requiring signed contracts.”³⁸

³³ See *Koda*, Finding and Order at ¶ 7.

³⁴ See, e.g., *In re Hecate Energy Cherrydale LLC*, Case No. 17-2074-EL-REN, Finding and Order (Mar. 14, 2018); *In re Hectate Energy Clark County LLC*, Case No. 17-1996-EL-REN, Finding and Order (Mar. 14, 2018); and *In re Anthony Harrington*, Case No. 17-2039-EL-REN, Finding and Order (Mar. 14, 2018).

³⁵ See *Koda*, Staff Report at 7-9; *id.*, Finding and Order at ¶ 10.

³⁶ CSG Motion at 4.

³⁷ *In the Matter of the Adoption of Rules for Alternative and Renewable Energy Technology, Resources, and Climate Regulations, and Review of Chapters 4901:5-1, 4901:5-5, and 4901:5-7 of the Ohio Administrative Code, Pursuant to Chapter 4928.66, Revised Code, as Amended by Amended Substitute Senate Bill No. 221*, Case No. 08-888-EL-ORD, Opinion and Order at 28 (Apr. 15, 2009).

³⁸ *In the Matter of the Amendment of Ohio Administrative Code Chapter 4901:1-40 Regarding the Alternative Energy Portfolio Standard, to Implement Am. Sub. S.B. 315*, Case Nos. 12-2156-EL-ORD, *et al.*, Finding and Order at ¶ 181 (Dec. 19, 2018); *In the Matter of the Adoption of Rules for Alternative and Renewable Energy Technology, Resources, and Climate Regulations, and Review of Chapters 4901:5-1, 4901:5-5, and 4901:5-7 of the Ohio Administrative Code, Pursuant to Chapter 4928.66, Revised Code, as Amended by Amended Substitute Senate Bill No. 221*, Case No. 08-888-EL-ORD, Opinion and Order at 28 (Apr. 15, 2009).

Similarly, in its Motion filed in these cases, CSG argues that physical deliverability depends on the RTO on which a facility is located.³⁹ CSG does not attempt to provide any modeling to support this assertion, although it does note that it represents out-of-state clients in PJM.⁴⁰ CSG presumably seeks to exclude these clients from the same contract requirements it proposes for out-of-state facilities in MISO. Unfortunately for CSG, the Commission has previously considered, and rejected, this very same argument.

In a rulemaking proceeding, the Commission considered a proposal to expand the definition of “deliverable into this state....to include electricity originating from a source located in MISO or PJM.”⁴¹ The Commission, instead, recognized that RTOs do not determine whether or not electricity is physically deliverable into Ohio. Rejecting this argument, the Commission stated that the definition of deliverability “does not need to be expanded to include any generation originating within the PJM or MISO transmission systems.”⁴²

Lastly, CSG argues that “[hypothetical] deliverability is not a substitute for actual deliverability within the meaning of R.C. 4928.64.”⁴³ As noted by Blue Delta above⁴⁴ and in the attached Expert Report,⁴⁵ DFAX studies are the best method of measuring physical deliverability, as the actual flow of individual electrons cannot be tracked. At any rate, this argument is a red herring. The term “actual deliverability” does not appear in R.C. 4928.64 or Ohio Adm.Code

³⁹ See CSG Motion at 4 (“All generation within PJM is “deliverable” anywhere else in PJM, physically as well as financially.”).

⁴⁰ CSG Motion at 3.

⁴¹ *In the Matter of the Amendment of Ohio Administrative Code Chapter 4901:1-40 Regarding the Alternative Energy Portfolio Standard, to Implement Am. Sub. S.B. 315*, Case Nos. 12-2156-EL-ORD, *et al.*, Finding and Order at ¶ 180 (Dec. 19, 2018).

⁴² *Id.* at ¶ 181.

⁴³ CSG Motion at 4.

⁴⁴ See *supra* Part II.A.

⁴⁵ Expert Report at ¶ 5.

4901:1-40-01(F); the latter defines deliverability as “physical.” To the extent that CSG believes the Commission should rewrite Ohio Adm.Code 49011-40-01, or the General Assembly should revise R.C. 4928.64, this is not an appropriate venue to make such a determination.

C. Effect of Challenges in REN Certification Cases on CSG Ohio Customers.

CSG seeks to manipulate the REC market in favor of CSG and its clients, at the expense of competitors and Ohio customers. Ultimately, CSG’s arguments are ill-supported, arbitrary, and self-serving because they are intended to harm CSG’s competitors and Ohio customers, while benefiting CSG and its clients. Although the Commission has not, and ultimately should not, give CSG’s arguments any credence, CSG has partially achieved its goals just by delaying further REN certifications through its litigious interference in routine REN applications. This impairs Ohio public policy in support of renewable energy generation and reasonably priced electric service.

Ohio law requires that a percentage of the electricity supplied by a utility or a CRES comes from qualifying renewable energy resources.⁴⁶ To meet this requirement, a utility or CRES may purchase RECs.⁴⁷ In regards to electric service in general, it is state policy to promote the availability to consumers of adequate, reliable, safe, efficient, nondiscriminatory, and reasonably priced retail electric service;⁴⁸ diversity of electricity supplies and suppliers;⁴⁹ market access for cost-effective supply- and demand-side retail electric service;⁵⁰ and consumer protection against unreasonable sales practices, market deficiencies, and market power.⁵¹

⁴⁶ R.C. 4928.64(B).

⁴⁷ R.C. 4928.645(A).

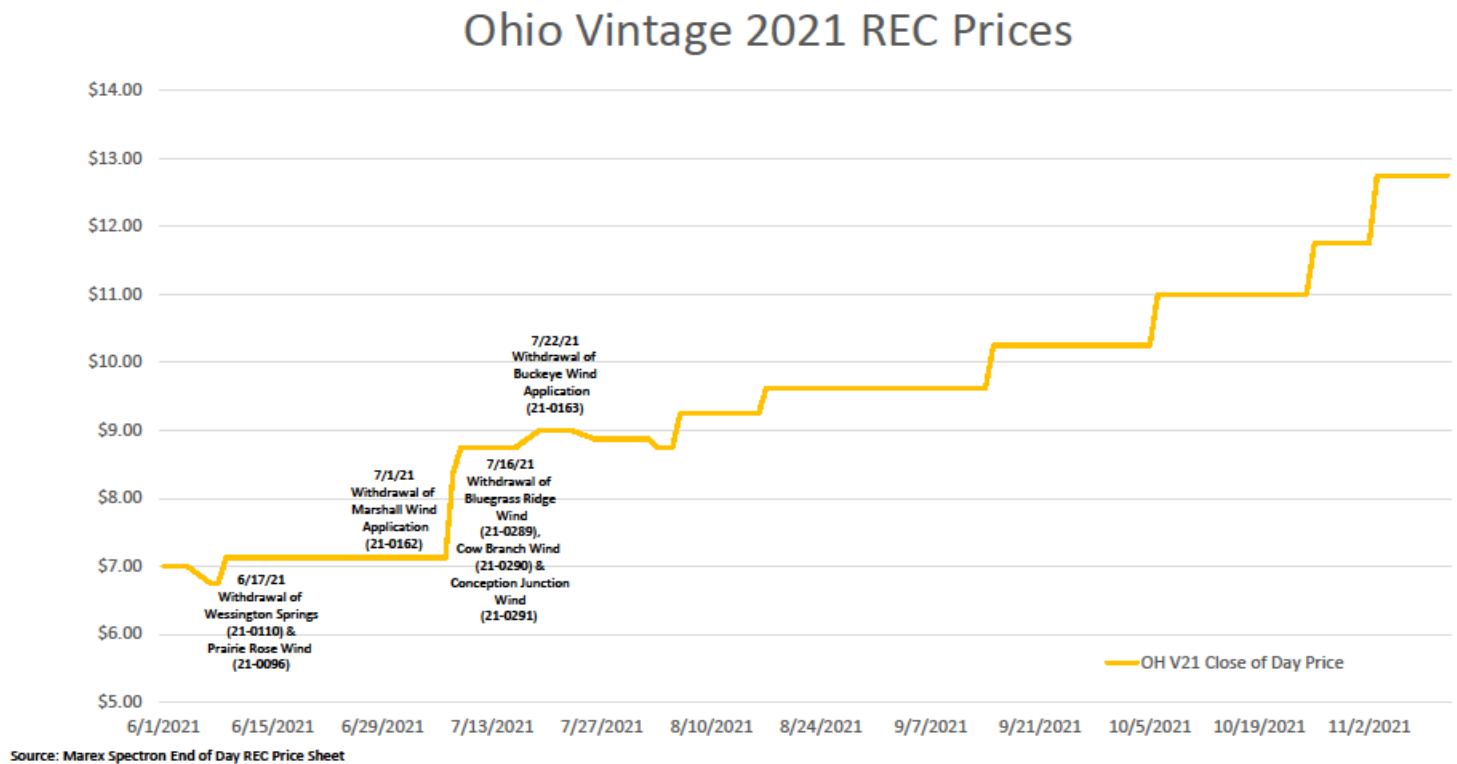

⁴⁸ R.C. 4928.02(A).

⁴⁹ R.C. 4928.02(C).

⁵⁰ R.C. 4928.02(D).

⁵¹ R.C. 4928.02(I).

CSG began intervening in REN certification proceedings to oppose applications in April 2021. As demonstrated in the below chart,⁵² since CSG's delay tactics, the price for RECs has steadily increased:

In the spring of this year, CSG began intervening in multiple REN certification application proceedings. As the costs and inherent delays associated with litigation and the Commission process continued to mount, facilities began to withdraw their applications, and the market began to realize the implications associated with the supply of RECs that would be available to meet compliance with Ohio's renewable portfolio standards (RPS). In June 2021, when Wessington

⁵² Also attached hereto as Attachment B, Ohio REC Price Chart.

Springs⁵³ and Prairie Rose Wind⁵⁴ withdrew their applications following CSG's opposition, the price for an Ohio REC was approximately \$7.00.⁵⁵ As more applicants followed suit, the price of Ohio RECs began to rise, reaching \$9.00 by July 2021.⁵⁶ Every non-adjacent state facility that had submitted an application for REN certification between Prairie Rose (which submitted its application in January) and the Applicants in the above-captioned cases that has been challenged by CSG has since withdrawn their application. There are also three other facilities that subsequently filed their applications that have been recommended for approval by Staff, which appear to be awaiting a decision in this case.⁵⁷ Accordingly, as the uncertainty in the market has continued to build, the price for RECs in Ohio has continued to climb and has now reached nearly \$13.00.⁵⁸

However, contrary to CSG's claim,⁵⁹ the REC market price increase has not lead to any increase in supply of RECs in the Ohio market, nor is it likely to incentivize further development. In fact, the majority of RECs generated from qualifying REN facilities located in Ohio are not retired for compliance with the Ohio renewable portfolio standards:

Total RECs	998,663	2,149	19,093	646,992	710,089	1,054,536	29.1%
<i>Source: PJM GATS</i>							
⁽¹⁾ Data is for the most recent RPS Compliance year (Reporting Year 2021 for DE, NJ & PA and Calendar Year 2020 for DC, MD & OH)							
⁽²⁾ Data for New Jersey is incomplete as compliance for Reporting Year 2021 is due on 12/1/2021. For comparison purposes, 932,939 OH RECs were retired for the previous year's NJ RPS Compliance							

As documented in the attached spreadsheet,⁶⁰ given the eligibility rules found in other state RPS programs where the REC prices offer greater value than those in Ohio, the price increase will not have a substantial benefit to renewable generators located in Ohio or lead to increased development of new Ohio renewable projects. Even with the price increase, a review of PJM GATS registered units, other state RPS eligibility requirements, and current REC prices finds that there are currently only four Ohio located facilities where the use of RECs from those facilities in the Ohio RPS would be the highest value option, two of which have an option only slightly below the Ohio REC price.⁶¹ Unless one of these four facilities is a CSG client, we would challenge CSG to identify an Ohio client of theirs who would directly be harmed by the approval of these units in

⁶⁰ See Attachment C, Ohio REN Eligible Units Where Ohio Is Optimal Value.

⁶¹ *Id.*

Ohio (assuming CSG is in fact acting to maximize the value of their clients' RECs by registering their facilities in all of the programs for which they are eligible).

Therefore we are strongly inclined to believe that this REC price increase, driven by artificial scarcity which directly benefits CSG, is CSG's ultimate goal. CSG has admitted as much, stating that its "interest is in preserving the value of RECs to renewable generators located in Ohio and PJM."⁶² By intervening in numerous REN certification proceedings for out-of-state facilities and opposing those REN certification applications, CSG has effectively halted the market for new renewable resource certifications in Ohio, driving up the price for CSG's own Ohio-sited or PJM-sited RECs. While this benefits CSG and its clients, it creates increased compliance costs for electric distribution utilities and CRES suppliers, in turn driving up costs to Ohio customers.

Furthermore, this violates state policy as it impacts the availability of reasonably priced electric service pursuant to R.C. 4928.02. Increased Ohio REC prices and decreased Ohio REC availability makes retail electric service less reasonably priced;⁶³ decreases market diversity of electricity supplies⁶⁴ and market access for cost-effective supply- and demand-side retail electric service;⁶⁵ and creates unreasonable market power for CSG and its clients.⁶⁶ Accordingly, in addition to lacking support in Ohio laws or regulations, Commission precedent, or technical realities, CSG's proposals violate Ohio policies pertaining to renewable energy resources and portfolio standards and electric service. By doing so, CSG, raises costs to consumers. CSG's proposals, therefore, should be rejected in their entirety.

⁶² CSG Motion at 5.

⁶⁵ See R.C. 4928.02(D).

⁶⁶ See R.C. 4928.02(I).

III. CONCLUSION

After an investigation and proposal by Staff, the Commission adopted the *Koda* Test as a reasonable and effective way of quantifying physical deliverability pursuant to Ohio Adm.Code 4901:1-40-01(F). The *Koda* Test's use of DFAX studies closely mirrors widely-accepted, nationwide industry standards. CSG, in an attempt to corner the REC market in violation of Ohio policy and at the expense of Ohio customers, offers unpersuasive arguments the Commission has previously rejected. As such, the Commission should affirm its use of the *Koda* Test, and pursuant to the Staff Reports filed in each of the five above-captioned cases, find that the facilities satisfy the requirements in Ohio law for certification, including that the energy from each facility is deliverable into the state pursuant to R.C. 4928.64(B)(3) and Ohio Adm.Code 4901:1-40-01(F) and 4901:1-40-04, and grant the applications for REN certification.

Respectfully submitted,

/s/ Kimberly W. Bojko

1 Background and Experience of GDS Associates, Inc.

1.1 OVERVIEW OF GDS ASSOCIATES

GDS Associates, Inc. (GDS), a privately-owned C corporation, was founded in 1986 and is an energy engineering and management consulting firm. GDS has 175 employees with offices throughout the United States. Our firm is committed foremost to identifying and meeting its client needs and striving to

The **GDS MISSION** is to “help our clients succeed by anticipating and understanding their needs and by efficiently delivering quality services with confidence and integrity”

continuously provide high quality work and responsive customer service. For more information on the full range of energy consulting services that GDS provides, please visit our website at www.gdsassociates.com. Our clients are principally publicly owned utilities such as cooperatives, municipalities, and joint action agencies. We also render services to regulatory agencies, commercial/industrial entities, utility consumer

groups, and state and federal government bodies.

1.2 CORPORATE CORE VALUES OF GDS ASSOCIATES, INC.

The size and depth of GDS permits us to offer clients multiple sources of assistance, ensuring complete, competent, and timely service. GDS’ long history of meeting client needs has established our reputation within the industry. In fact, most of our project assignments are derived from repeat work for existing clients or from client referrals. GDS recognizes that no two clients or problems are exactly alike, so we strive to deliver “right-fit” solutions for each client’s particular situation. GDS conducts its business in accordance with stated core values which we follow steadfastly in providing services to our clients.

CORE VALUES	1	We endeavor to identify then meet or exceed our clients’ needs	4	Our consulting staff will possess the requisite knowledge and experience to solve our clients’ problems
	2	We gauge our overall success in terms of our clients success, by promoting a partnership perspective	5	Our service will be competently performed, and our work product will be presented in a professional, understandable manner
	3	We will conduct our practice at all times with honesty and integrity	6	Our financial success is founded on long-term client relationships, proficient project management, and efficient infrastructure

1.3 CORE BUSINESS OF GDS ASSOCIATES, INC.

GDS consultants are recognized leaders in their respective fields, dedicated to their clients, innovative in their approach to meeting unique challenges, and known for consistently being available when needed. Our comprehensive range of expertise focuses on clients associated with, or affected by, electric, natural gas, water and wastewater utilities. In addition, GDS offers information technology, market research, statistical and social media marketing services to a diverse client base. In recent years, we have performed consulting services for over 700 different clients.

FIGURE 1.1 GDS CONSULTING SERVICES

Figure 1.1 above presents the consulting service areas in which GDS has specialized expertise. GDS is headquartered in Marietta, GA. We have regional offices in Auburn, AL; Augusta, ME; Austin, TX; Kirkland, WA; Madison, WI; Manchester, NH; Orlando, FL; and Portland, OR.

1.4 EXPERIENCE OF PROJECT AUTHOR

John Chiles, *Principal* of GDS, has over 30 years of electric utility and consulting experience. He has worked in several sectors of the energy industry, including electric cooperatives, municipal utilities, investor-owned utilities, and merchant energy companies. Included in this experience is generation and transmission planning, RFP bid evaluation, market design analysis, transmission access issues, locational marginal pricing, regulatory litigation, control area operations and next-day transmission trading. He was responsible for managing the daily transmission portfolio for the two largest merchant power plants in the United States and coordinated a generator-only control area in the WECC region. He has represented multiple companies at Regional Transmission Organizations (RTOs) and has provided technical guidance on issues before state commissions and the Federal Energy Regulatory Commission's (FERC) such as generator operating limits, generator imbalance protocols, RTO transmission issues, transmission facility need determination and transmission access.

Specifically, Mr. Chiles has consulted with utilities, government agencies, and industrial clients in the following areas:

- Served as Stakeholder Representative for clients within Entergy, the Midcontinent Independent System Operator (MISO) and the Southwest Power Pool (SPP) on matters related to transmission expansion planning and market design
- Assisted multiple clients during the Entergy integration into MISO, including conversion of transmission rights, valuation of generation assets, and Day 2 market preparation
- Provided generation interconnection support services for renewable and fossil-fuel based facilities, including siting analysis, technical study support, client representation with Transmission Providers, and negotiation of Interconnection Agreements
- Filed expert witness testimony at FERC and State jurisdictions regarding transmission facility need determination, transmission loss calculations, integrated resource planning and RTO integration activities
- Conducted North American Electric Reliability Corporation (NERC) mock audits on Transmission Planning (TPL), Facility Rating (FAC), and Modeling (MOD) Standards for numerous municipal and cooperative organizations
- Supported generation procurement Request for Proposals (RFPs) through providing technical and strategic support on transmission issues

Mr. Chiles holds a Bachelor of Science Degree in Engineering from the University of South Florida.

A more detailed resume of Mr. Chiles' experience and expert witness qualifications can be found in the Appendix.

1.5 BACKGROUND

Given its expertise in the industry, GDS Associates was retained by Blue Delta Energy, LLC (Blue Delta) and Avangrid Renewables, LLC (Avangrid) to assess the effectiveness of the PJM Interconnection, L.L.C. (PJM) distribution factor (DFAX) methodology with respect to certain renewable facilities located in the MISO RTO that are seeking certification by the Public Utilities Commission of Ohio (PUCO) to become qualified renewable energy resource generating facilities pursuant to R.C. 4928.64.

The following Avangrid facilities have been consolidated in a single proceeding for the purpose of the PUCO evaluating the Carbon Solutions Group's (CSG) request challenging the effectiveness of the DFAX methodology and applicability of the *Koda* Test to evaluate whether resources located outside the state of Ohio should be eligible to qualify as Ohio renewable energy resource facilities. The discussion below is applicable to each of the facilities being considered as the issues are consistent across all of the renewable assets. A summary of each facility and their pending applications before the PUCO are provided below:

1.5.1 Moraine Wind LLC (Case 21-516-EL-REN)¹

The Moraine Wind facility consists of thirty-four 1.5 MW turbines for a total capacity of 51.0 MW located in Murray County, Minnesota. The facility is connected to the Xcel transmission system in MISO.

¹ See *In the Matter of The Application of Moraine Wind LLC for Certification as an Eligible Ohio Renewable Energy Resource Generating Facility*, Case No. 21-516-EL-REN, Application (Apr. 30, 2021).

1.5.2 Rugby Wind LLC (Case 21-517-EL-REN)²

The Rugby Wind facility consists of seventy-one 2.1 MW turbines for a total capacity of 149.1 MW located in Rugby, North Dakota. The facility is connected to the Otter Tail Power transmission system in MISO.

1.5.3 Elm Creek Wind II LLC (Case 21-531-EL-REN)³

The Elm Creek Wind facility consists of seventy-one 2.4 MW turbines for a total capacity of 148.8 MW located in Trimont, Minnesota. The facility is connected to the Northern States Power transmission system in MISO.

1.5.4 Buffalo Ridge II LLC (Case 21-532-EL-REN)⁴

The Buffalo Ridge II wind facility consists of one-hundred and five 2.0 MW turbines for a total capacity of 210.0 MW located in Brookings and Deuel Counties in South Dakota. The facility is connected to the Xcel transmission system at the Brookings substation in MISO.

1.5.5 Barton Wind Power LLC (Case 21-544-EL-REN)⁵

The Barton Windpower 1 facility consists of forty 2.0 MW turbines for a total capacity of 80.0 MW located in Worth County, Iowa. The facility is connected to the Alliant Energy (West) transmission system between the Adams South and Lime Creek substations in MISO.

² *In the Matter of The Application of Rugby Wind LLC for Certification as an Eligible Ohio Renewable Energy Resource Generating Facility*, Case No. 21-517-EL-REN, Application (Apr. 30, 2021).

³ *In the Matter of the Application of Elm Creek II for Certification as an Eligible Ohio Renewable Energy Resource Generating Facility*, Case No. 21-0531-EL-REN, Application (May 3, 2021).

⁴ *In the Matter of The Application of Buffalo Ridge II for Certification as an Eligible Ohio Renewable Energy Resource Generating Facility*, Case No. 21-532-EL-REN, Application (May 3, 2021).

⁵ *In the Matter of The Application of Barton Windpower 1 for Certification as an Eligible Ohio Renewable Energy Resource Generating Facility*, Case No. 21-544-EL-REN, Application (May 4, 2021).

2 Summary of Conclusions and Recommendations

GDS has reached the following conclusions based upon a review and analysis of the pending applications and related documents:

- The PUCO's use of DFAX as a proxy for deliverability to the state Ohio as utilized in the *Koda* Test reflects a standard that is commonly used in the electric utility industry and has wide acceptance by both NERC and FERC. The five percent DFAX and 1 MW minimum requirements recognized by the PUCO are reasonable when compared to other entities located in the Eastern Interconnection.
- NERC supports the DFAX method for flowgate calculations, transmission loading relief and the calculation of Available Transfer Capability between regions. The two entities most impacted by the deliverability arguments made by CSG, PJM and MISO, have a FERC-approved joint operating agreement that relies on DFAX as the basis for expansion planning, interconnection planning, real-time congestion management and facility cost allocation. The five percent DFAX and 1 MW minimum requirements are reasonable when compared to other entities located in the Eastern Interconnection.

Given that the *Koda* Test is based on industry standards, and is reasonable, GDS supports the use of the *Koda* Test. GDS also supports the PUCO Staff's findings that the five Avangrid facilities seeking certification satisfy the *Koda* Test and the site-specific requirements embedded in Ohio law, and thus, should be certified in Ohio as qualifying renewable energy resources generating facilities.

3 Summary of Koda Test and Basics (Governing Principles/Authorities)

3.1 THE KODA TEST

In PUCO Case No. 09-555-EL-REN, Koda Energy LLC (Koda Energy), the owners of a 23.9 MW bio-mass facility located in Minnesota, petitioned for certification as an eligible Ohio renewable energy resource generating facility.⁶ To qualify, the PUCO noted that an applicant must demonstrate that the facility satisfies several criteria, including that:

The generation produced by the renewable energy resource generating facility can be shown to be deliverable into the state of Ohio, pursuant to Section 4928.64(B)(3), Revised Code.⁷

To determine whether the renewable energy resource generating facility can be shown to be deliverable into the state of Ohio, Staff recommended that the Commission adopt a new deliverability methodology.⁸ Staff proposed a study method to determine deliverability based on the use of distribution factors and a MW impact on transmission lines in Ohio resulting from the potential transaction:

Staff recommends evaluating the physical deliverability of electricity into Ohio from a generating facility located outside of Ohio or a contiguous state based on the following methodology:

A demonstration of deliverability may include a power flow study performed by the transmission operator(s) which offers evidence of any significant impact on power flows over transmission lines located in the state of Ohio and serving loads connected to distribution lines located in Ohio due to electricity produced at the renewable generating facility's location.⁹

Staff notes that it is impossible to physically track energy from a specific generating facility to a specific load location. At Staff's request, MISO and PJM, the two RTOs operating in Ohio, conducted DFAX or power flow studies to determine whether power flows from generating facilities modeled within PJM and MISO, but located outside of both Ohio and states contiguous to Ohio, have an impact on power flows over transmission lines located within Ohio. Staff

⁶ *In the Matter of the Application of Koda Energy LLC for Certification as an Eligible Ohio Renewable Energy Resource Generating Facility*, Case No. 09-555-EL-REN (*Koda*), Application (July 1, 2009).

⁷ *Koda*, Finding and Order at ¶ 2 (Mar. 23, 2011).

⁸ *Koda*, Staff Review and Recommendation at 8-9 (Feb. 28, 2011) (emphasis added).

⁹ *Koda*, Finding and Order at ¶ 7 (Mar. 23, 2011) (emphasis added).

explains that a DFAX study is a computer model of the transmission systems that measures the change in power flows across a flowgate due to a change in generation, if any significant impact was evident from the study. Staff recommends that this impact be considered as evidence of physical deliverability into Ohio.¹⁰

Staff further explains that only generating facilities that are connected to the transmission systems operated by PJM and MISO were modeled in the power flow studies. Thus, in order for a generating facility located outside of Ohio or a contiguous state to meet the deliverability criteria, the facility would have to be interconnected with a transmission system and be modeled by the RTO in the power flow study. In reviewing the power flow studies performed by PJM and MISO, Staff noted that some of the DFAX values are very small and within the error tolerance of the study. In recognition of this fact, Staff recommends application of a cut-off threshold value. Staff notes that, for billing purposes, an agreement exists in both PJM and MISO that, if the DFAX value on a transmission line is below five percent, there is no associated charge as such an impact is considered "noise" or otherwise insignificant. In addition, MISO also relies upon the megawatt (MW) equivalence of the impact and does not assess charges unless the impact exceeds a DFAX value of greater than five percent and the MW equivalence of the impact is greater than 1 MW. The MW equivalence of the impact is calculated by multiplying the DFAX value by the facility's nameplate capacity. Staff recommends that the Commission adopt this threshold as the definition of a "significant impact" on a transmission line in Ohio. Under Staff's recommended definition, an impact would be deemed significant, and thus physically deliverable into Ohio under Staff's proposed methodology, if the impact exceeds a DFAX value of greater than five percent and is greater than one megawatt.¹¹

The PUCO ultimately issued an order denying the application of Koda Energy, but agreed with and adopted Staff's proposed methodology for assessing deliverability (the *Koda* Test). The Order states:

The Commission finds that Staff's proposed methodology and recommended definition of "significant impact" are reasonable and should be adopted. Accordingly, any applicant seeking to demonstrate the physical deliverability of energy into Ohio from a generating facility located outside of Ohio or a contiguous state may do so with a power flow study, performed by an RTO, offering evidence of a significant impact on power flows over transmission lines located in the state of Ohio. The transmission lines must serve loads connected to distribution lines located in Ohio. If the study shows an impact on a transmission line in Ohio that is greater than five percent and greater than one

¹⁰ *Id.*

¹¹ *Id.*

megawatt, the electricity produced by the renewable generating facility would be deemed to have a significant impact, thereby satisfying the statutory criteria that the electricity is physically deliverable into Ohio.¹²

From the PUCO's Order adopting the *Koda* Test, it is clear that the application of the *Koda* Test is not a rubber stamp to certify facilities outside of Ohio and neighboring states. In *Koda*, the application of the methodology was the only evidence used to show that the first criteria for qualification was not successfully met.

Over the years, the *Koda* Test has withstood challenges by parties petitioning the PUCO to adopt a different standard, including a challenge to define deliverability based on the RTO in which the facility is located.¹³ Furthermore, the PUCO has twice affirmed that deliverability does not require a demonstration of a "contract path."¹⁴

3.1.1 The *Koda* Test Has a Basis in NERC and FERC Precedent

Since 1999, NERC has supported the use of a DFAX-based Transmission Loading Relief process to address real-time loading on the bulk electric system. The fact that NERC continues to maintain multiple standards that reference the use of TLR for congestion management is a testament to the longstanding and prudent practice that benefits from a DFAX-based methodology.

FERC's support for the use of a DFAX methodology for expansion planning cost allocation highlights the reasonableness of this method. Additionally, FERC has not requested NERC to remove the interconnection reliability operation and coordination (IRO) standards and modeling, data, and analysis (MOD) standards that rely on DFAX as their foundation. If the DFAX method had some fatal flaw, the FERC would not continue to permit its use throughout the industry.

3.2 DISTRIBUTION FACTOR BASICS

A Transfer Distribution Factor is the percentage of a transaction between a point of injection and a point of withdrawal that flows across a particular element of a transmission system. The transfer distribution is driven by the impedance of all elements in the transmission network. Lines with a lower impedance carry a higher percentage of flow than lines with a higher impedance.

¹² *Koda*, Finding and Order at ¶¶ 9-10 (Mar. 23, 2011) (The DFAX impact in *Koda* on Ohio facilities was 2.5%, which resulted in a 0.375-megawatt impact.) (emphasis added).

¹³ *In the Matter of the Amendment of Ohio Administrative Code Chapter 4901:1-40 Regarding the Alternative Energy Portfolio Standard, to Implement Am. Sub. S.B. 315*, Case Nos. 12-2156-EL-ORD, *et al.*, Finding and Order at ¶¶ 180-181 (Dec. 19, 2018).

¹⁴ *In the Matter of the Amendment of Ohio Administrative Code Chapter 4901:1-40 Regarding the Alternative Energy Portfolio Standard, to Implement Am. Sub. S.B. 315*, Case Nos. 12-2156-EL-ORD, *et al.*, Finding and Order at ¶ 181 (Dec. 19, 2018), quoting *In the Matter of the Adoption of Rules for Alternative and Renewable Energy Technology, Resources, and Climate Regulations, and Review of Chapters 4901:5-1, 4901:5-5, and 4901:5-7 of the Ohio Administrative Code, Pursuant to Chapter 4928.66, Revised Code, as Amended by Amended Substitute Senate Bill No. 221*, Case No. 08-888-EL-ORD, Opinion and Order at 28 (Apr. 15, 2009).

There are several types of distribution factors. These include:

- Power Transfer Distribution Factor (PTDF)
 - The Power Transfer Distribution Factor (PTDF) is the percent of flow between a source (A) and a sink (B) that flows across element X.
- Outage Transfer Distribution Factor (OTDF)
 - The Outage Transfer Distribution Factor (OTDF) is percent of flow between a source (A) and a sink (B) that flows across element X for the loss of element Y.
- Line Outage Distribution Factor (LODF)
 - The Line Outage Distribution Factor (LODF) is the percent of flow between a source (A) and a sink (B) from element Y that flows across element X for the loss of element Y.

Mathematically, the flow across Element X (no contingencies) for a transaction between Point of Injection A and Point of Withdrawal B is:

$$\text{Flow}_X = \text{MW}_{A-B} * \text{PTDF}_{X(A-B)}$$

For the case where flow across Element X is impacted by the contingency loss of Element Y, the flow across Element X is:

$$\text{Flow}_X = \text{MW}_{A-B} * \text{PTDF}_{X(A-B)} + \text{MW}_{A-B} * \text{OTDF}_{Y(A-B)} \text{ or}$$

$$\text{Flow}_X = \text{MW}_{A-B} * \text{PTDF}_{X(A-B)} + \text{MW}_{A-B} * \text{PTDF}_{Y(A-B)} * \text{LODF}_{X \text{ ftlo } Y(A-B)}$$

PJM documents its use of distribution factors for the calculation of Available Transfer Capability (ATC) in their Available Transfer Capability Implementation Document (ATCID), effective March 29, 2019.¹⁵ Attachment C to the PJM Open Access Transmission Tariff (OATT) references the methodology used to assess ATC and has been approved by FERC as part of the PJM OATT. Section 5 of the ATCID details the Flowgate Methodology that references distribution factors.

¹⁵ <https://www.pjm.com/pub/oasis/ATCID.pdf>.

4 Assumptions Made by PJM and Their Reasonableness

4.1 USE OF A FIVE PERCENT DFAX CUTOFF

The PUCO uses a five percent DFAX minimum in its deliverability requirement. The use of a five percent DFAX cutoff is not only reasonable, but is in many respects, a very conservative use of the cutoff. For example, in the Southern Company System (SCS), the Company uses a three percent TDF cutoff to eliminate those facilities that are minimally impacted by the installation of a new generator. Entergy, prior to joining MISO, used a three percent TDF cutoff as well. With a five percent DFAX cutoff, PJM is excluding even more facilities than these two systems.

The Joint Operating Agreement (JOA) between PJM and MISO¹⁶ governs how the two RTOs collectively analyze their systems for coordinated planning, operation, and congestion management. This most recent version of this agreement has been in place since December of 2008. MISO and PJM perform affected system studies for new interconnection requests¹⁷ based on a DFAX screening. If the interconnection request is for a connection to the PJM system, PJM completes the following process:

During the course of its interconnection feasibility studies, PJM shall monitor the MISO transmission system and provide to MISO the draft results of the potential impacts to the MISO transmission system. This monitoring will include an examination of the potential for projects to impact the MISO system by determining whether the project under study has a ≥ 3 percent distribution factor on MISO facilities that operate below 500 kV or ≥ 10 percent distribution factor on MISO facilities that operate at or above 500 kV under system intact conditions.¹⁸

If the interconnection request is on a MISO facility, then MISO completes the following process:

After completion of DPP cycle application deadline and at least thirty (30) days prior to the commencement of the DPP Phase I, MISO shall perform screening analysis to monitor the PJM transmission system and provide to PJM the draft results of the potential impacts to the PJM transmission system. This monitoring will include an examination of the potential projects to impact the PJM system through determination if the project under study has a ≥ 3 percent distribution factor or ≥ 5 MW impact or ≥ 1 percent of facility rating on any PJM facilities under normal and contingency conditions.¹⁹

¹⁶ Joint Operating Agreement Between the Midcontinent Independent System Operator, Inc. and PJM Interconnection, L.L.C., available at <https://www.pjm.com/directory/merged-tariffs/miso-joa.pdf> (Dec. 11, 2008) (JOA).

¹⁷ JOA, Section 9.3.3.

¹⁸ *Id.*, Section 9.3.3, (f) (i) (emphasis added).

¹⁹ *Id.*, Section 9.3.3 (g) (i) (emphasis added).

The five percent DFAX cutoff adopted by the PUCO in the *Koda* Test is consistent with, and in some respects, superior to other utilities located in the Eastern Interconnection. The DFAX criteria is also consistent with the FERC-approved MISO-PJM JOA.

4.1.1 DFAX Impact of Avangrid Facilities

Table 4-1 shows the DFAX impact of each facility provided by PJM for the facilities regarding the applications. The DFAX reports prepared by PJM for these facilities can be found in the Appendix. The DFAX impact column contains two values. The first value is the highest DFAX for the case where either the start or end of the line is in Ohio. The second value is the highest DFAX for a transmission line which has both a starting point and end point in Ohio. Each facility successfully passed the requirements of the *Koda* test with respect to the DFAX cutoff.

TABLE 4-1. SUMMARY OF DFAX STUDY RESULTS

Project (Location)	Capacity (MW)	DFAX (%)
Moraine (MN)	51.0	16.37%/11.16% ²⁰
Rugby (ND)	149.1	16.44%/11.18% ²¹
Elm Creek II (MN)	148.8	16.50%/11.20% ²²
Buffalo Ridge II (SD)	210.0	16.38%/11.16% ²³
Barton Windpower 1 (IA)	80.0	17%/11.36% ²⁴

Even using the ten percent DFAX criteria referenced by PJM, which is double the threshold required by the PUCO's *Koda* Test, each one of the Avangrid facilities passes the PJM threshold. Accordingly, in the Staff Review and Recommendation filed in each of the five Avangrid cases, Staff recommended certification of each facility at issue.

4.2 THE USE OF A 1 MW THRESHOLD CUTOFF

The *Koda* Test also requires an impact on a transmission line in Ohio of greater than 1 MW. The use of a 1 MW threshold cutoff is designed to capture those transactions which have a higher DFAX impact but the size of the resource is so small that the actual impact on a line is negligible. For example, a 10 MW project with a five percent DFAX impact on a 230-kV line would only have a 0.5 MW impact on a facility with a rating much higher than the transaction impact. Depending on the solution technique used by the power flow solution, the “noise” in the model would likely exceed a 1 MW threshold.

4.2.1 MW Impact of Avangrid Facilities

Table 4-2 shows the MW impact of each facility as noted by PJM provided by PJM for the facilities regarding the applications. The MW impact column contains two values. The first value is based on the highest DFAX for the case where either the start or end of the line is in Ohio. The second value is based on the highest DFAX for a transmission line, which has both a starting point and end point in Ohio. Each facility successfully passed the requirements of the *Koda* test with respect to the MW cutoff.

TABLE 4-2. SUMMARY OF MW IMPACT RESULTS

Project (Location)	Capacity (MW)	Impact (MW)
Moraine (MN)	51.0	8.35 MW/5.69 MW
Rugby (ND)	149.1	24.50 MW/16.66 MW
Elm Creek II (MN)	148.8	24.55 MW/16.66 MW
Buffalo Ridge II (SD)	210.0	34.40 MW/23.44 MW
Barton Windpower 1 (IA)	80.0	13.60 MW/9.09 MW

Even using the 5 MW criteria referenced by PJM, which is significantly higher than the 1 MW threshold required by the *Koda* Test, each one of the facilities passes the MISO threshold. Accordingly, in the Staff Review and Recommendation filed in each of the five Avangrid cases, Staff correctly recommended certification of the specific facility at issue.

5 Issues Raised by CSG

5.1 “PHYSICAL DELIVERY” VERSUS “CONTRACT PATH”

In the Avangrid cases, CSG intervened and submitted comments, claiming there are two ways of measuring deliverability: physical and contractual. The Ohio rule specifies that deliverability must be physical. Notably, the measures for physical and contractual deliverability have no bearing on each other. If the physical deliverability refers to a direct connection between the generator and the load that is typically considered as a contract path, this ignores the basic physics of the power grid including parallel flows on other systems. If the contract path refers to a contractual transmission path between the generator and the load that respects the physical flows on the grid, then it is incumbent to choose the methodology that respects the laws of physics.

5.1.1 Contract Path Does Not Guarantee Physical Delivery

CSG opines that the presence of the contract path is the only way to guarantee physical delivery from a generating resource to a specific load. The premise is not supported by basic physics or by operational reality. There are only two scenarios in which CSG’s assertions are true. The first scenario is if a load and a resource are directly connected using a direct-current (DC) line. The DC line allows for injection to be at a specific location and withdrawal to occur at the end of the circuit. The DC line bypasses the network transmission system and the associated parallel flows that would occur. The second scenario is if a single generator and a single load are connected by a single AC line where no other AC lines are present. Neither of these scenarios are applicable to the facilities seeking certification in this proceeding.

In an integrated transmission network, power flows according to the impedance of all facilities and thus follows the path of least resistance. Electrons do not follow contractual arrangements, unless the two scenarios referenced above are applicable. Those who remember the details of the August 14, 2003, blackout in the northeastern US understood that loss of power transfers due to the loss of the FirstEnergy ties into PJM resulted from the impacts of interrupted parallel flows and not the impacts of contract path flows. In MISO, the limitations put in place to address the transmission loading on the New Madrid - Dell 500-kV for the integration of the MISO South members were not the 1,000 MW contract path limit but were related to the 4,000+ MW of incremental network flows that occurred on the Dell – New Madrid line in addition to flows across the Southwest Power Pool (SPP) and Tennessee Valley Authority (TVA) systems coming from MISO North to MISO South transactions.

5.2 ACCEPTANCE OF THE DFAX METHODOLOGY

5.2.1 Use of DFAX with Respect to NERC Practices

CSG suggests that the DFAX methodology is dated and “no longer holds today” and that it is a “flawed” methodology. However, DFAX methodology is currently and commonly used by federal regulators and system operators to assess deliverability to maintain system integrity.

5.2.1.1 DFAX and the NERC/RTO Congestion Management Processes

Standards promulgated by NERC include two standards that are directly applicable to the discussion of the use of DFAX as an acceptable methodology with respect to deliverability of resources to load. Standard IRO-006-5, which is the Reliability Coordination – Transmission Loading Relief (TLR) standard and IRO-006-EAST-2, which is the TLR Procedure for the Eastern Interconnection, rely on the use of distribution factors as a foundation for the evaluation and curtailment of Interchange transactions between balancing authorities. The evaluation of Interchange transactions uses the Interchange Distribution Calculator (IDC). The IDC is a matrix that uses a form of distribution factors, known as generation distribution shift factors (GDSF) and load distribution shift factors (LDSF) to calculate the impact of any transaction between balancing authorities. Curtailment of transactions is based on the percentage of flow between two balancing authorities across a flowgate that may become overloaded. Curtailment priority is determined by the flow impact across the flowgate in question.

5.2.1.2 DFAX and the NERC Standards for Calculation of Deliverability (MOD)

NERC has established three acceptable methodologies for calculating the ability to move power between locations. MOD-028-2 is the Area Interchange Methodology. MOD-029-2a is the Rated System Path Methodology. MOD-030-3 is the Flowgate Methodology. Both the Area Interchange Methodology and the Flowgate Methodology specifically rely upon the use of various distribution factors for the identification of flowgates and the application of those flowgate to assess Available Transmission Capacity between regions. Requirement R2.1.1 states:

Results of a first Contingency transfer analysis for ATC Paths internal to a Transmission Operator's system up to the path capability such that at a minimum the first three limiting Elements and their worst associated Contingency combinations with an OTDF of at least 5% and within the Transmission Operator's system are included as Flowgates.²⁵

Requirement R2.1.2 of MOD-030-3 also states:

Results of a first Contingency transfer analysis from all adjacent Balancing Authority source and sink (as defined in the ATCID) combinations up to the path capability such that at a minimum the first three limiting Elements and their worst associated Contingency combinations with an Outage Transfer Distribution Factor (OTDF) of at least 5% and within the Transmission Operator's system are included as Flowgates unless the interface between such adjacent Balancing Authorities is accounted for using another ATC methodology.²⁶

Lastly, Requirement R2.1.4.1 of MOD-030 references the valid usage of distribution factors for determination of assessments of deliverability between Balancing Authorities:

²⁵ NERC Standard MOD-030-3, R2.1.1, available at <https://www.nerc.com/files/MOD-030-3.pdf> (Nov. 13, 2014) (emphasis added).

²⁶ *Id.*, R2.1.2 (emphasis added).

Any generator within the Transmission Service Provider's area has at least a 5% Power Transfer Distribution Factor (PTDF) or Outage Transfer Distribution Factor (OTDF) impact on the Flowgate when delivered to the aggregate load of its own area, or A transfer from any Balancing Area within the Transmission Service Provider's area to a Balancing Area adjacent has at least a 5% PTDF or OTDF impact on the Flowgate. The Transmission Operator may utilize distribution factors less than 5% if desired.²⁷

5.2.2 Use of DFAX with Respect to MISO-PJM Facility Expansion

PJM documents their use of distribution factors for the calculation of Available Transfer Capability (ATC) in their ATCID, effective March 29, 2019.²⁸ Attachment C to the PJM OATT references the methodology used to assess ATC and has been approved by FERC as part of the PJM OATT. Section 5 of the ATCID details the Flowgate Methodology that references distribution factors.

MISO and PJM also support the use of DFAX for cost allocation of Cross-Border Baseline Reliability Projects (CBBRPs). Section 9.4.4.2.1 of the JOA states:

The Coordinated System Plan shall designate the share of the Project Cost to be allocated to each RTO based on the relative contribution of the combined Load of each RTO to loading on the constrained facility requiring the need for the CBBRP. The loading contribution will be pre-determined using a joint RTO planning model developed and agreed to by the planning staff of both RTOs. This model will form the base case from which reliability needs on the combined systems will be determined for the Coordinated System Plan. The model, adjusted for the conditions driving the upgrade needs, will be used to calculate the DFAX for cost allocation purposes for each RTO, using a source of the aggregate of RTO generation (network resources) for each RTO to a sink of all Loads within that RTO. The DFAX is the appropriate distribution factor for the condition causing the upgrade; OTDF for contingency condition flow criteria violations, and PTDF for normal condition flow criteria violations. The DFAX calculation determines the MW flow impact attributable to each RTO on the constraint requiring the transmission system to be upgraded. The total load of each RTO for the condition modeled is multiplied by the DFAX associated with that RTO to determine the respective MW flow contribution of that RTO to the constraint. The RTOs will quantify the relative impact due to PJM's system and the relative impact due to MISO's system and then will allocate between PJM and MISO the load contributions to the reliability constraint on the system by calculating the relative impacts caused by each RTO. This methodology will determine the extent to

²⁷ NERC Standard MOD-030-3, R2.1.4.1, available at <https://www.nerc.com/files/MOD-030-3.pdf> (Nov. 13, 2014) (emphasis added).

²⁸ PJM Available Transfer Capability Implementation Document, available at <https://www.pjm.com/pub/oasis/ATCID.pdf> (Mar. 29, 2019).

which each RTO contributes to the need for a reliability upgrade consistent with the Coordinated System Plan modeling that determined the need for the upgrade. The MISO total load impacts will be allocated to MISO and the PJM total load impacts will be allocated to PJM. PJM and MISO will then reallocate their shares internally in accordance with their respective tariffs. By calculating the impacts in this manner, the RTOs will ensure that the relative contribution of each RTO (including both the aggravating and benefiting contributions of generation and load patterns within each RTO) to the need for a particular upgrade, is appropriately captured in the ensuing allocations, and that the allocation is consistent with the Coordinated System Plan modeling that determined the need for the upgrade.²⁹

5.2.3 Use of DFAX in Other Regions of the US

The use of DFAX as an approximation of system flows and deliverability is employed throughout the United States. In the Southeast, the DFAX is part of the calculation for short-term Available Transfer Capability in the Tennessee Valley Authority, Southern Company System, Santee Cooper, Duke Energy Carolinas, Duke Energy Progress, Florida Power & Light and Emera – Tampa Electric Company systems. As previously described, the DFAX-based Transmission Loading Relief (TLR) procedures are an important part of managing regional flows between systems, including market-to-non-market seams with MISO, Southwest Power Pool and PJM. In the Western Interconnection, the DFAX and Transfer Distribution Factors have been part of evaluating Unscheduled Flows³⁰ since 2016 and continue to be used today.³¹

²⁹ JOA, Section 9.4.4.2.1(a) (emphasis added).

³⁰ See Western Interconnection Unscheduled Flow Mitigation Plan (WIUFMP).

³¹ <https://www.spp.org/western-services/western-interconnection-unscheduled-flow-mitigation-plan-wiufmp/>.

6 Conclusions

The use of DFAX as a proxy for deliverability to the state of Ohio as utilized in the *Koda* Test reflects a standard that is commonly used in the electric utility industry and has wide acceptance by FERC. NERC supports the DFAX method for flowgate calculations, transmission loading relief and the calculation of Available Transfer Capability between regions. The two entities most impacted by the deliverability arguments made by CSG—PJM and MISO—have a FERC-approved joint operating agreement that relies on DFAX as the basis for expansion planning, interconnection planning, real-time congestion management and facility cost allocation. The PUCO's five percent DFAX and 1 MW minimum requirements are reasonable when compared to other entities located in the Eastern Interconnection.

Given that the *Koda* Test is based on industry standards, and is reasonable, GDS supports the use of the *Koda* Test. GDS also supports the PUCO Staff's findings that the five Avangrid facilities seeking certification satisfy the *Koda* Test and the requirements embedded in Ohio law, and thus, should be certified in Ohio as qualifying renewable energy resources generating facilities.

APPENDIX C.

Resume of John Chiles

EDUCATION ●

Bachelor of Science in Engineering, University of South Florida, 1993

PROFESSIONAL MEMBERSHIPS ●

IEEE, Power Engineering Society

PROFESSIONAL EXPERIENCE ●

Mr. Chiles has over 30 years of electric utility and consulting experience. He provides regulatory and strategic support for generation and transmission cooperatives, municipal electric systems, independent generation developers, industrial consumers and state commissions regarding regional transmission organization energy markets, open access transmission issues, transmission planning and need certification, generation siting and interconnection, NERC compliance support and training, and stakeholder representation in RTO stakeholder forums. Mr. Chiles has filed testimony at the Federal Energy Regulatory Commission (FERC) and at several State regulatory commissions.

GDS Associates, Inc., September 2005 to Present

Principal, Transmission Services

As a Principal at GDS, Mr. Chiles consults with utilities, government agencies, and industrial clients in the following areas:

- Served as Stakeholder Representative for clients within Entergy, the Midcontinent Independent System Operator (MISO) and the Southwest Power Pool (SPP) on matters related to transmission expansion planning and market design
- Assisted multiple clients during the Entergy integration into MISO, including conversion of transmission rights, valuation of generation assets, and Day 2 market preparation
- Provided generation interconnection support services for renewable and fossil-fuel based facilities, including siting analysis, technical study support, client representation with Transmission Providers, and negotiation of Interconnection Agreements
- Filed expert witness testimony at FERC and State jurisdictions regarding transmission facility need determination, transmission loss calculations, integrated resource planning and Regional Transmission Organization (RTO) integration activities
- Conducted NERC mock audits on Transmission Planning (TPL), Facility Rating (FAC), and Modeling (MOD) Standards for numerous municipal and cooperative organizations
- Supported generation procurement Request for Proposals (RFPs) through providing technical and strategic support on transmission issues

TECO Energy, Tampa, FL, January 2000 – January 2004

Manager

- Monitored and provided corrective action on NERC compliance
- Served as Southwest Reserve Sharing Group and WECC Operating Committee representative
- Developed generation optimization process to achieve optimal dispatch of 2,200 MW plant to meet NERC criteria
- Optimized daily transmission positions for 4,400 MW asset portfolio (\$3MM/month)
- Determined transmission deliverability (ATC, Generator Operating Limit) to support balance of month and originated transactions
- Provided regulatory support on issues at FERC and state levels
- Assisted in development of and modifications to ERCOT protocols
- Determined how changes in regional markets impacted profitability of asset portfolio
- Represented company at FERC, SeTrans and State jurisdictions

- Developed and Presented of 5- and 10-Year expansion plans
- Representative on GridFlorida Flowgate Working Group
- LMP analysis for TECO Assets

North Carolina Electric Membership Corporation, Raleigh, NC, 1994 –1999

Project Engineer

- Impacts of FERC Order 888 and 889 on member systems; reviewed and analyzed wholesale provider transmission expansion plans
- Transmission-Dependent Utility representative on SERC ATC Working Group
- OASIS site testing
- Consulting support to PA Cooperative group for PA Retail Access Program
- Expansion plan development for Duke Energy, Carolina Power & Light, Dominion Virginia Power
- RFP bid evaluation
- Evaluation of Structured Transactions for external sales

AREAS OF EXPERTISE ●

Regional Transmission Organization Operations and Policy Support

- Market Integration Support for new entrants in California Independent System Operator (CAISO), SPP and MISO
- Market Analysis of Nodal Price Data
- Technical Support on RTO Settlements Issues

Energy Market Design

- Nodal Market Development (ERCOT)
- Resource Adequacy Market Development (PJM)
- Energy Imbalance Market Development (SPP, WECC)

Open Access Transmission Issues

- Loss Study Review and Support
- Deliverability Analysis for Generation Assets
- Negotiation of Agreements for Transmission Service

Transmission System Modeling and Planning

- Power Flow Analysis
- Short Circuit Analysis
- Need Certification Technical Studies
- Review of Impact of Transmission Expansion Plans on Load and Generation

Production Cost Modeling and Simulation

- PROMOD Studies for Generation Margin Determination and Load Cost Analysis
- Assessment of Economic Transmission Projects
- Financial Transmission Rights Evaluation

Generation Interconnection Process Evaluation and Support

- Power Flow-Based Site Selection Analysis
- Technical Support for Review of Transmission Provider Studies
- Negotiation of Interconnection Service Agreements

NERC Compliance Activities

- TPL Assessments
- Development of Policies, Guidelines and Procedures
- Mock Audits and Gap Analysis
- Subject Matter Expert Training for TPL, FAC, and MOD Standards

Regulatory, Strategic and Stakeholder Support

- Stakeholder Representation at MISO, SPP, and ERCOT
- Technical and Regulatory Support for Clients at FERC and State Jurisdictions

EXPERT WITNESS TESTIMONY ●

FEDERAL ENERGY REGULATORY COMMISSION (FERC)

PJM Interconnection, LLC, American Transmission Systems, Inc., Docket No. ER12-2399-003

Southwestern Electric Cooperative, Inc., et al., Docket Nos. EL15-72, et al., Panel Member for Technical Conference

ARKANSAS PUBLIC SERVICE COMMISSION (APSC)

In the Matter of a Show Cause Order Directed to Entergy Arkansas, Inc. Regarding Its Continued Membership in the Current Entergy System Agreement, or Any Successor Agreement Thereto, and Regarding the Future Operation and Control of Its Transmission Assets, Docket No. 10-011-U

GEORGIA PUBLIC SERVICE COMMISSION (GPSC)

In the Matter of: Georgia Power Company's 2010 Integrated Resource Plan, Docket No. 31081

In the Matter of: Georgia Power Company's 2013 Integrated Resource Plan, Docket No. 36498

In the Matter of: Georgia Power Company's 2016 Integrated Resource Plan, Docket No. 40161

In the Matter of: Georgia Power Company's 2019 Integrated Resource Plan, Docket No. 42310

MISSISSIPPI PUBLIC SERVICE COMMISSION (MPSC)

In Re: Joint Application of Entergy Mississippi, Inc., and The Midwest Independent Transmission System Operator, Inc., for Transfer of Functional Control of Entergy Mississippi's Transmission Facilities To MISO, Docket No. 2011-UA-376

PUBLIC UTILITY COMMISSION OF TEXAS (PUCT)

Entergy Gulf States, Inc.'s Transition to Competition Plan, PUC Docket No. 33687

Application of Sharyland Utilities, L.P. to Approve Study and Plan Pursuant to the Commission's Order in Docket No. 37990 Concerning the Movement of Sharyland's Stanton and Colorado City Divisions from the Southwest Power Pool to ERCOT, PUC Docket No. 39070

Application of Entergy Texas, Inc., ITC Holdings Corp., MidSouth Transco LLC, Transmission Company Texas, LLC, and ITC MidSouth LLC for Approval of Change of Ownership and Control of Transmission Business, Transfer of Certification Rights, Certain Cost Recovery Approvals, and Related Relief, PUC Docket No. 41223

Updated Application of Entergy Texas, Inc., ITC Holdings Corp., Mid-South Transco LLC, Transmission Company Texas, LLC, and ITC Midsouth LLC for Approval of Change of Ownership and Control of Transmission Business, Transfer Of Certification Rights, and Related Relief, PUC Docket No. 41850

COMMONWEALTH OF VIRGINIA STATE CORPORATION COMMISSION DIVISION OF ENERGY (VSCC)

Virginia Electric and Power Company for Approval and Certification of Electric Facilities for the Surry-Skiffes Creek 500 kV Transmission Line, Skiffes Creek-Whealton 230 kV Transmission Line, and Skiffes Creek 500 kV-230 kV-115 kV Switching Station, Case No. PUE-2012-00029

Virginia Electric and Power Company for Approval and Certification of Electric Transmission Facilities for the Remington CT-Warrenton 230 kV Double Circuit Transmission Line, Vint Hill-Wheeler and Wheeler-Loudoun 230 kV Transmission Lines, 230 kV Vint Hill Switching Station, and 230 kV Wheeler Switching Station, Case No. PUE-2014-00025
