RE: Emerson Creek Wind Farm

Groton and Oxford Townships, Erie County, Ohio, and Lyme, Ridgefield, Sherman, Norwich, and Richmond Townships, Huron County, Ohio

Dear Ms. Arena:

This letter is in response to the revised history-architecture report received on January 5, 2021, regarding the proposed Emerson Creek Wind Farm. The comments of the Ohio State Historic Preservation Office (SHPO) are made pursuant to Section 149.53 of the Ohio Revised Code and the Ohio Power Siting Board rules for siting this project (OAC 4906-4 and 490-5). The comments of the SHPO are also submitted in accordance with the provisions of Section 106 of the National Historic Preservation Act of 1966, as amended, and the associated regulations at 36 CFR Part 800.

Our office has reviewed the revised Historic Resources Survey Report, Emerson Creek Wind Farm, Groton and Oxford Townships, Erie County, Ohio, Lyme, Ridgefield, Sherman, Norwich, and Richmond Townships, Huron County, Ohio, prepared by Environmental Design and Research (EDR) in October 2020. The project is a 297.66-megawatt wind energy facility consisting of up to 87 wind turbine generators and associated infrastructure.

Within the Area of Potential Effects (APE), consisting of approximately a 5-mile radius view shed and the project area, EDR surveyed 1,062 resources. Of the surveyed resources, 5 properties are listed in the National Register of Historic Places (NRHP), but one of these properties is no longer extant (Ref. #79003646). The Spacecraft Propulsion Research Facility (Ref #85002802) is within the NASA Plum Creek Research Station, and was not publicly accessible to be evaluated. In addition, 54 properties were not publicly accessible or visible from the right-of-way, and 71 properties were found to be no longer extant. The report also states that 4 properties previously surveyed for the Ohio Historic Inventory (OHI) that did not have a formal determination of eligibility were a contributing resource to NRHP-listed properties (OHI #s HUR0007501, HUR0007601, SEN0054605, and SEN0054505). As a result of the survey, 84 properties appear to be eligible for listing in the NRHP, and 845 are not eligible for listing in the NRHP. The SHPO concurs with these recommendations of eligibility.

Emerson Creek Wind February 4, 2021 Page 2

The report also stated that due to the open and flat landscape, "the proposed construction of the ECWF may result in a significant change to the visual setting of the NRHP-listed and NRHP-eligible historic properties located within the APE for Indirect Effects." The SHPO also agrees with this recommendation.

The SHPO understands that a final number of turbines and actual locations have not been determined. Because of the size of the windfarm and the number of NRHP-listed and eligible properties, we do not feel that adjusting turbine locations will keep this project from causing an adverse effect on historic properties. Therefore, the applicant and the SHPO need to agree on appropriate mitigation for the construction of the wind facility. The process used to reach this decision and the mitigation will be memorialized in a Memorandum of Understanding.

We recommend that you identify and contact interested consulting parties (i.e., NASA, Firelands Historical Society, etc.) so that they may provide comments on options to avoid, minimize, or mitigate the adverse effect. We look forward to working with you to resolve this issue. If you have any questions, please contact me at kkoehlinger@ohiohistory.org or (614) 298-2000. Thank you for your cooperation.

Sincerely,

Diana Welling, Department Head & Deputy State Historic Preservation Officer for Resource Protection and Review

"Please be advised that this is a Section 106 decision. This review decision may not extend to other SHPO programs."

Subject: Revised - Emerson Creek and Republic Wind Farms historic resources survey reports.

Good morning Kristen,

We've updated both the Emerson Creek and Republic Wind Farms reports per your comments. The links for the complete reports can be found here:

Emerson Creek – 2021-1-5 Emerson Creek Wind Farm Historic Resources Survey Complete.pdf

Republic – 2021-1-5 Republic Wind Farm Historic Resources Survey complete.pdf

Please let us know if you have any additional questions.

Thank you.

Susan Arena

PROJECT ABSTRACT

OHPO Project Review Number: 2019-HUR-43954

Involved State and Federal Agencies: Ohio Historic Preservation Office (OHPO)

Ohio Power Siting Board (OPSB)

Phase of Survey: Historic Resources Survey

Location Information: Groton and Oxford Townships, Erie County, Ohio

Lyme, Ridgefield, Sherman, Norwich, and Richmond Townships, Huron

County, Ohio

Project Description: A 297.66-megawatt (MW) wind energy project consisting of up to 87 wind

turbine generators and associated infrastructure.

Project Area: Approximately 64 square miles (41,000 acres)

Historic Resources Study Area: A five-mile radius of the Project Area (446 square miles).

Area of Potential Effects (APE) for

Indirect Effects:

Areas with potential visibility of the Project (per the viewshed analysis)

within the Historic Resources Study Area (309 square miles).

USGS 7.5-Minute Quadrangle Map: Kimball, OH; Bellevue, OH; Flat Rock, OH; and Centerton, OH

Historic Resources Survey Overview: A total of 1,062 resources were evaluated that are located within the APE

for Indirect Effects. There are five National Register of Historic Places (NRHP)-listed properties (including one that is no longer extant), 84 properties that appear to satisfy NRHP-eligibility criteria, and 845

properties that did not appear to satisfy NRHP-eligibility criteria.

A total of 54 properties were not publicly accessible or were not visible from the right-of-way, and 71 properties were found to be no longer extant (inclusive of the NRHP-listed property mentioned above). Four properties previously identified by OHPO as not having a formal NRHP eligibility status were determined to be contributing resources to NRHP-listed

properties.

Report Authors: Susan Arena, Andrew Roblee, and Grant Johnson

Date of Report: October 2020

ACKNOWLEDGEMENTS

This report was greatly assisted by the resources provided by the Ohio History Connection, Ohio Department of Transportation, the Norwalk Public Library, and the Bellevue Public Library. Kristen Koehlinger, Krista Horrocks, Lisa Adkins, and Diana Welling of the Ohio State Historic Preservation Office were instrumental in providing clarity regarding the perimeters of this historic resources survey.

1.0 INTRODUCTION

1.1 Purpose of the Survey

On behalf of Firelands Wind, LLC (Firelands Wind), Environmental Design & Research, Landscape Architecture, Engineering, & Environmental Services, D.P.C. (EDR) prepared this Historic Resources Survey for the proposed Emerson Creek Wind Farm (ECWF), located in Groton and Oxford Townships, Erie County, and Lyme, Ridgefield, Sherman, Norwich, and Richmond Townships, Huron County, Ohio.

The purpose of this Historic Resources Survey is to identify historic buildings that appear to satisfy National Register of Historic Places (NRHP) eligibility criteria within areas where the ECWF may result in indirect impacts on historic resources (defined as areas within five miles of the ECWF; see Section 1.3) and to seek concurrence from OHPO on the results presented herein. Construction of the ECWF will not require the demolition or physical alteration of any buildings or other potential historic resources. The ECWF's potential effect on archaeological resources will be evaluated in a separate (i.e., archaeological survey) report and are not discussed herein.

The Historic Resources Survey was completed by EDR architectural historians Andrew Roblee and Susan Arena, who satisfy the qualifications criteria per the Secretary of the Interior's Standards for Historic Preservation. Resumes for Mr. Roblee and Ms. Arena are attached as Appendix A. The field survey was conducted in accordance with the Ohio Historic Preservation Office (OHPO) Guidelines for Conducting History/Architecture Surveys in Ohio (Guidelines; OHPO, 2014) as well as the Historic/Architectural Survey Plan prepared by the Mannik & Smith Group (MSG, 2019) and approved by OHPO on December 30, 2019 (see Appendix B).

1.2 Report Organization

This report was written in accordance with the *Guidelines* (OHPO, 2014) and the *Survey Report Submission Requirements* (OHPO, 2018) and includes the results of the field investigation in narrative (written), graphic (mapping and photographs), and prescriptive (OHPO I-Form) formats included as insets, figures, and appendices. The report is organized as follows:

- Section 1.0 (Introduction) provides the purpose of the survey, summary of report organization, ECWF location
 and description, definitions of commonly used terms, and summary of previous consultation with the OHPO.
- Section 2.0 (Research Design) includes a detailed statement of the survey's goals and objectives, the methodology used during the survey, criteria used for resource evaluation, and expected survey results.
- Section 3.0 (Setting and Historic Context) includes a description of historic research source materials, an
 environmental context description, an account of the development of transportation routes within the Historic

Resources Study Area (defined in Section 2.2), and history of the Historic Resources Study Area focusing on the theme of agriculture.

- Section 4.0 (Results of Field Investigation) includes a description of conditions and constraints encountered
 while undertaking the survey and the results of the survey of the Historic Resources Study Area, including
 newly identified and previously identified historic resources.
- Section 5.0 (Summary) concludes with the survey and effect analysis results and how the newly identified historic resources relate to the NRHP Criteria.
- Section 6.0 (References) includes full citations for sources consulted during the production of this report.

1.3 Project Location and Description

Firelands Wind is proposing to construct a maximum 297.66 MW wind energy facility located in Groton and Oxford Townships in Erie County, and Lyme, Ridgefield, Sherman, Norwich, and Richmond Townships in Huron County, Ohio (see Figure 1). As proposed, the Project consists of the construction and operation of a commercial-scale wind energy facility, including installation and operation of up to 87¹ wind turbines, access roads, buried electrical collection cables, up to three permanent meteorological (met) towers, a collection substation, one temporary laydown yard, and an operations and maintenance (O&M) building, collectively referred to as the ECWF. The ECWF will occupy an approximately 41,000-acre Project Area will be sited within leased private lands (see Figure 2). Of the approximately 41,000-acre Project Area, parcels totaling approximately 32,000 acres are owned and/or under lease by Firelands Wind for construction and operation of the proposed ECWF.

The following terms are used throughout the Historic Resources Survey to describe the proposed action:

ECWF:

Collectively refers to all components of the Emerson Creek Wind Farm, which includes wind turbines, buried collection cables, a substation, meteorological towers, access roads, and an operations and maintenance building in Groton and Oxford Townships in Erie County, and Lyme, Ridgefield, Sherman, Norwich, and Richmond Townships in Huron County, Ohio.

Project Area:

The Project Area consists of an approximately 41,000-acre polygon within which all ECWF components will be contained, including parcels currently under lease (or other real property interests) by Firelands Wind (see Figure 2).

¹ Although the ECWF layout includes up to 87 turbine locations, only 71 turbines are planned to be built. Therefore, the Historic Resources Survey considering all 87 locations provides the most conservative analysis of potential impacts to historic properties within a larger study area and APE for Indirect Effects.

Historic Resources Study

Area:

The Historic Resources Study Area is the area within five miles² of the Project Area including portions of Crawford, Erie, Huron, Sandusky, and Seneca Counties, Ohio

(see Figure 2). The current Historic Resources Study Area encompasses

approximately 446 square miles.

APE for Direct Effects: The APE for Direct Effects is the area containing all proposed soil disturbance

associated with the Project. Construction of the ECWF will not require the

demolition or physical alteration of any above-ground historic resources.

APE for Indirect Effects: The APE for Indirect Effects includes those areas where the ECWF may result in

indirect effects on historic resources, such as visual or auditory effects. As presently envisioned, the APE for Indirect Effects for the ECWF is the area within the Historic Resources Study Area, as defined in this section, which is within the potential viewshed (based on topography) of the ECWF. The current ECWF layout has an APE for Indirect Effects of approximately 309 square miles (69 percent of

the Historic Resources Study Area; see Figure 2).

1.4 OHPO Consultation

A Historic/Architectural Survey Plan was prepared by Mannik & Smith Group (MSG) and submitted to OHPO in December of 2019 (MSG, 2019). In correspondence received by MSG dated December 30, 2019, OHPO concurred with the proposed survey plan, which serves as guidance for the methodology and execution of this Historic Resources Survey and associated report (Koehlinger, 2019). Per the MSG Historic/Architectural Survey Plan the Historic Resources Study Area consists of a five-mile radius around the Project Area and a lower level of analysis is to be performed in the area between four and five miles from the Project Area. Therefore, the four-mile study area is represented in Figure 2.

In addition, a meeting was held on January 21, 2020 at the OHPO office in Columbus with EDR and OHPO staff to follow-up with questions regarding the MSG survey plan and confirm the approach of the historic resources survey with regard to appropriate documentation of historic properties. This consultation resulted in the requested inclusion of representative examples of property types that are not considered NRHP-eligible but are common to the Historic Resources Study Area (EDR, 2020; see Appendix B).

² Per the *Historic/Architectural Survey Plan* that was prepared by Mannik & Smith Group (MSG, 2019) and agreed to by OHPO on December 30, 2019 (see Appendix B), a lower level of analysis was performed in the area between four and five miles from the Project Area. Therefore, the four-mile study area is also represented in Figure 2. However, since the APE for Indirect Effects as defined in the *Historic/Architectural Survey Plan* considered a five-mile study area, the Historic Resources Study Area described throughout this report and depicted on the figures is inclusive of a five-mile study area.

2.0 RESEARCH DESIGN

2.1 Survey Goals and Objectives

As described in the *Historic/Architectural Survey Plan* (MSG, 2019), the goals of this Historic Resources Survey are to:

- Identify properties within the APE for Indirect Effects of the ECWF (see Section 1.3) that appear to meet eligibility criteria for listing on the NRHP
- Photograph and document previously unidentified historic properties within the Historic Resources Study
 Area that appear to have been built at least fifty years ago, but do not appear to meet eligibility criteria for
 listing on the NRHP
- Provide updated information on previously identified historic structures and sites in the OHPO inventory within
 the Historic Resources Study Area, including: NRHP-listed, NRHP-eligible, Ohio Historic Inventory (OHI)identified resources and districts, Ohio Department of Transportation (ODOT) NRHP-eligible bridges, and
 Ohio Genealogical Society (OGS) cemeteries

2.2 Historic Resources Study Area and Area of Potential Effect (APE)

The five-mile Historic Resources Study Area for the Project encompasses approximately 446 square miles located within Townsend and York Townships in Sandusky County; Groton, Margaretta, Perkins, Oxford, Huron, and Milan Townships in Erie County; Thompson, Reed, Venice Townships in Seneca County; Lyme, Sherman, Norwich, Richmond, Ridgefield, Peru, Greenfield, New Haven, and Norwalk Townships in Huron County; and Cranberry and Auburn Townships in Crawford County, Ohio. Within the Historic Resources Study Area, a four-mile radius around the Project was established, outside of which a lower level of analysis was prescribed. The APE for Indirect Effects on historic resources includes those areas within the Historic Resources Study Area where the ECWF may result in indirect effects on historic resources, such as visual or auditory impacts.

Therefore, the APE for Indirect Effects on historic resources includes all areas within the Historic Resources Study Area (per 4906-04-08(D) of the OAC) where Project components may be visible and where there is a potential for a significant visual effect (see Figure 2).

Viewshed analyses were based on the Ohio Statewide Imagery Program's 2007 light detection and ranging (lidar) data for Erie, Huron, Sandusky, and Seneca Counties. From that data, topographic viewshed maps were generated that defined the maximum distance from which any turbine could potentially be seen within the study area. The topographic viewshed analysis is based upon the existence of a direct, unobstructed line of sight to a proposed turbine from various observation points throughout the study area based on the screening provided by topography only. The resulting

topographic viewshed maps defined the maximum area from which any turbine could potentially be seen within the Historic Resources Study Area.

To provide a more accurate analysis of potential Project visibility within the Historic Resources Study Area, a second-level viewshed analysis was completed to incorporate the screening effect of structures and vegetation, as captured in the previously referenced 2007 lidar data, in addition to the topographic analysis. Because it accounts for the screening provided by structures and trees, this second-level viewshed analysis is a more accurate representation of potential Project visibility. However, it is worth noting that because characteristics of the proposed turbines that influence visibility (color, narrow profile, distance from viewer, etc.) cannot be taken into consideration in the viewshed analyses, being located within the viewshed does not necessarily equate to actual Project visibility. The viewshed analyses help define those areas with the greatest potential for Project visibility within the Historic Resources Study Area.

2.3 Survey Methodology

A Historic Resources Survey was completed for the ECWF by professionals who satisfy the qualifications per the Secretary of the Interior's Standards for Historic Preservation (36 CFR 61; CFR 2004a). The Historic Resources Survey planning efforts included preparation and submission to OHPO of the amended *Cultural Resources Records Review* (EDR, 2019a), and historic context research for the Historic Resources Study Area (summarized in Section 3.2), prior to conducting the survey.

Archives and repositories consulted during research included EDR's in-house collection of reference materials, online digital collections of the Library of Congress, the David Rumsey Historical Map Collection (Cartography Associates, 2020), the online resources of the Ohio History Connection (OHPO, 2020a) and the reference libraries at the Bellevue Public Library in Bellevue, Ohio and the Rutherford B. Hayes Presidential Library in Fremont, Ohio. Historic maps reviewed included the 1864 Map of Seneca Co. Ohio (Lake, 1864); 1868 Atlas of the State of Ohio (Walling, 1868); 1859 Map of Huron County, Ohio (Nunan, 1859); 1872 New Topographical Atlas of the State of the Ohio (Gray and Walling, 1872); 1873 Atlas of Huron County, Ohio (Lake, 1873); 1873 Illustrated Atlas of Crawford Co., Ohio (Gould and Starr, 1873); 1874 Combination Atlas Map of Erie County (Stewart, 1874); 1874 Combination Atlas Map of Seneca County (Stewart, 1874); 1874 Combination Atlas Map of Seneca County (Stewart, 1874); 1874 Combination Atlas Map of Seneca County, Ohio (Woods, 1891); 1891 Atlas of Huron County, Ohio (Mesnard, 1891); 1896 Illustrated Atlas and Directory of Erie County, Ohio (Atlas, 1896); 1896 The County of Seneca, Ohio (Rerick Brothers, 1896); and 1898 The County of Sandusky, Ohio: An Imperial Atlas and Art Folio (Hopple, 1896).

Site visits within the APE for Indirect Effects were conducted by EDR staff the weeks of January 13-17, January 27-31, February 10-14 and March 9-13, 2020 to identify, evaluate, and photograph potential historic resources. The

condition and integrity of all resources were evaluated based solely on the visible exterior of the structures as viewed from the public right-of-way. This included photographs of the building(s) (and associated property when necessary) and field notes describing the style, physical characteristics and materials (e.g., number of stories, plan, external siding, roof, foundation, and sash), condition, physical integrity, and other noteworthy characteristics for each resource.

EDR's evaluation of historic resources within the APE for Indirect Effects focused on the integrity (with respect to design, materials, feeling, and association) to assess the potential architectural significance of each resource. No inspections or evaluations requiring access to the interior of buildings, or any portion of private property, were conducted as part of this assessment. The existing conditions of properties that appeared to have been built fifty years ago or more were documented by EDR's architectural historian and included in a documentation table with relevant photographs for each property, regardless of apparent NRHP eligibility.

2.4 Criteria for Evaluating the Significance of Historic Resources

Historically significant properties are defined herein to include buildings, districts, objects, structures and/or sites that have been listed on the NRHP, as well as those properties that the OHPO has formally determined are eligible for listing on the NRHP. Criteria set forth by the National Park Service (NPS) for evaluating historic properties (36 CFR 60.4) state that a historic building, district, object, structure or site is significant (i.e., eligible for listing on the NRHP) if the property conveys (CFR, 2004; NPS, 1990):

The quality of significance in American history, architecture, archeology, engineering, and culture is present in districts, sites, buildings, structures, and objects that possess integrity of location, design, setting, materials, workmanship, feeling, and association and:

- (A) that are associated with events that have made a significant contribution to the broad patterns of our history; or
- (B) that are associated with the lives of persons significant in our past; or
- (C) that embody the distinctive characteristics of a type, period, or method of construction, or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction; or
- (D) that have yielded, or may be likely to yield, information important in prehistory or history.

Ordinarily cemeteries shall not be considered eligible for the NRHP. However, cemeteries will qualify if they are integral parts of districts that do meet the criteria or if they fall within the following categories (NPS, 1990):

Criterion Consideration D. A cemetery which derives its primary significance from graves of persons of transcendent importance, from age, from distinctive design features, from association with historic events.

2.5 Expected Survey Results

Existing conditions within the Historic Resources Study Area and the general vicinity consists an open agricultural landscape with widely dispersed farmsteads, often with relatively modern support structures and houses with additions and alterations. In January of 2019 EDR completed a *Cultural Resources Records Review* (CRRR) for a 10-mile radius of the Project Area, which identified 148 NRHP-listed properties, 43 NRHP-eligible properties, and 2,777 properties recorded in the Ohio Historic Inventory (EDR, 2019a). Based on the results of the CRRR, the MSG *Historic/Architectural Survey Plan*, and the existing conditions within the Historic Resources Study Area, the survey is expected to result in the new identification of fewer than 100 historic resources that appear to meet eligibility criteria for listing on the NRHP.

3.0 SETTING AND HISTORIC CONTEXT

3.1 Environmental Setting

The majority of the landscape within the Historic Resources Study Area is that of flat, open agricultural fields. These fields are bisected by long, straight rural transportation routes laid out in a north-south grid pattern and secondary diagonally-running connecting roads. When not interrupted by rare woodlots, the relatively level topography within the Historic Resources Study Area allows for clear views to historic resources. Views to farmhouses and agricultural buildings within large scale farming landscapes are dependent on their distance from the public rights-of-way, vegetation, and existing structures. There are no major bodies of water within the Historic Resources Study Area. The Huron River enters the area at the northeast corner and divides into an East and West Branch before further separating into half a dozen smaller tributaries as it flows south.

3.2 Transportation Routes

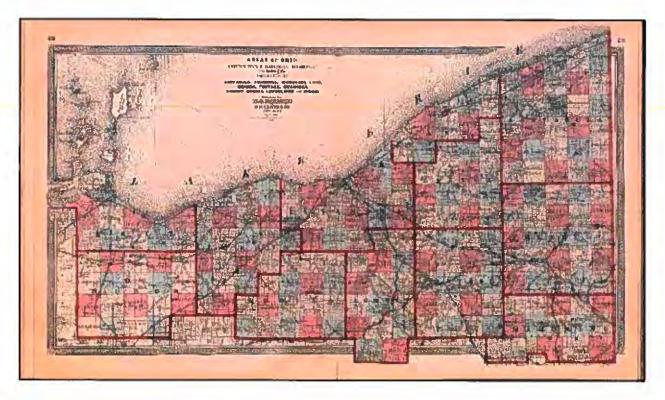

Historic maps indicate that very little change has taken place to the agricultural landscape since the forests were cleared and the roads platted in the early nineteenth century. Railroad lines have consistently been vital to moving people and goods. As of the 1870s numerous lines crisscrossed the state, along with tumpikes and rural roads. The Sandusky, Mansfield, and Newark Railroad ran south from Sandusky, intersecting with the Lake Shore and Michigan Southern line in the Village of Monroeville (see Inset 1). Both railroads are extant, though the routes have shifted slightly. Today they operate as the Norfolk-Southern, and Wheeling and Lake Erie lines, respectively. Additionally, the B&O Railroad runs east-west just north of Willard. Roadways are predominantly widely spaced, running generally along north-south and east-west axes. Highways transecting the Historic Resources Study Area include State Route 4, which runs southwest from Sandusky, and State Route 20 and Interstate 80 that run east-west through Erie and Sandusky Counties and the northern part of Huron County. South of State Route 20 there are no major roadways until State Route 224, also running east-west just south of Willard.

3.3 Historical Development

Record of Pre-Contact period (from approximately 15,000 years ago to approximately 500 years ago) occupation indicates an active and widespread population of Native American groups throughout Ohio. Evidence of permanent settlements by the Whittlesey people in the northeast part of the state were reported from about 1000-1650 CE. First European contact in Ohio occurred in the late-seventeenth century with the arrival of French missionaries and later, fur traders and surveyors. The French never attempted permanent settlement and as such maintained a mostly amicable relationship with the Native Americans. British exploration in the mid-eighteenth century led to conflict with the French as survey and trade competition increased, with both laying claim to lands in what is now northeast Ohio. Tensions between the French and British eventually led to the French and Indian War (1754-1763), also known as the Seven Years War. The British prevailed and soon after, American colonists began moving west (Aldrich, 1889; One State

Many Nations, 2008; OHPO, 2020b). As noted previously, the ECWF's potential effects on archaeological resources will be evaluated in a separate (i.e., archaeological survey) report and are not discussed further herein.

A land grant given in 1662 by the British to the Connecticut colony awarded them rights to all lands between the 41st and 42nd parallels, excluding New York and Pennsylvania. Following the Revolutionary War, in 1786, the State of Connecticut forfeited the majority of this land for the creation of the Northwest Territory (Duff, 1931). The state retained a portion of the lands occupying the northeast corner of present-day Ohio (see Inset 1). This tract, totaling slightly less than four million acres and known as the Connecticut Western Reserve, was composed of two parts, the western part was known as the Firelands, and the eastern part was sold to the Connecticut Land Company in 1795 and subsequently surveyed and divided into townships. Many New Englanders lost their homes and land to the devastation of the war, relocating to the Western Reserve on land that had been set aside as compensation for their losses. The new residents had been burned out of their former homes and sought refuge there, leading to the region being called the Firelands or the Sufferers' Lands. Settlement was sparse and slow though, so significant development did not occur until after the War of 1812 (Campen, 1971; OHPO, 2020c).

Inset 1. 1868 Atlas of Ohio, Connecticut "Western Reserve"

The far western portion of the Western Reserve lies within the Historic Resources Study Area (Walling, 1868).

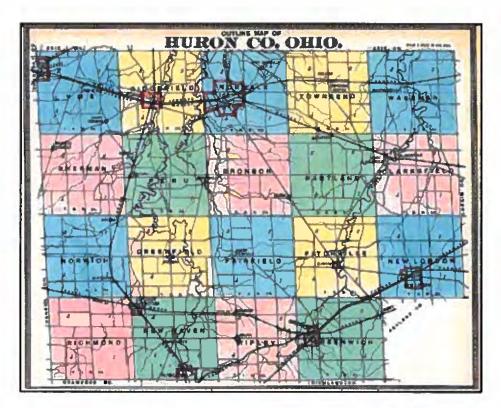

Ohio was admitted into the Union as a State on March 1, 1803 and Huron County was formed in 1809, originally occupying the entirety of the Firelands. The county is predominantly rural with areas of concentrated population in Bellevue, which straddles the county line, and Norwalk, the County Seat (Baughman, 1909; OHPO, 2020d).

Seneca County was formed on February 12, 1820 and was named after the Native Americans living in the area at the time. The Indian Removal Act of 1830 forced the remaining Seneca and their fellow Iroquois to leave their Ohio lands. The following year, in 1831, several roads were planned in an area of the former Seneca reservation to be established as Pleasant Township (Butterfield, 1848; Warner, Beers & Co., 1886).

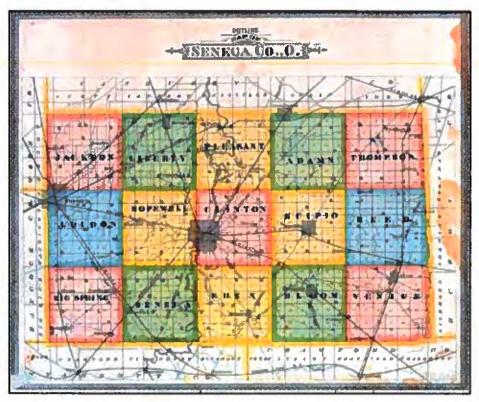

Erie County was created in 1838 from parts of Huron and Sandusky Counties. The City of Sandusky, situated on the shore of Lake Erie, is the County Seat and the county's largest municipality with a population of approximately 25,000 (Peeke, 1916; USCB, 2018). In 1839 the three-mile long Milan Canal was completed, connecting the Village of Milan to major shipping routes via Lake Erie, and on to eastern markets. Due to this transportation opportunity Milan briefly became one of the largest ports of wheat shipping in the world, with up to 20 schooners passing through the town daily. Canal flooding and the rise of rail transportation made the canal unnecessary by 1868 (Milan Canal Basin, 1966).

To a lesser extent, the northeast corner of Crawford County and the southeast corner of Sandusky County are also included in the Survey Area. That portion of Crawford County is predominantly rural and does not cover any concentrated centers of population. The county's leading industries for employment are in the manufacturing, service, and sales sectors, though agricultural activities occupy a majority of the land (OHPO, 2020f) The eastern part of Sandusky County consists mostly of agricultural properties and single-family homes. The City of Bellevue, which straddles the county line with Huron, is the only urban center.

Historic maps illustrate the relative stability of rural development within the Historic Resources Study Area. For example, the 1891 Atlas of Huron County, Ohio (see Inset 2) and the 1896 Atlas of Seneca County, Ohio (see Inset 3) show the major transportation corridors (largely unchanged today) having already been established. Within those corridors is a gridwork of secondary roads framing large parcels of land. This pattern of land division, marked by single structures near the roadways, indicates the presence of farms. Agriculture was a major theme in the establishment, development, and current conditions of the landscape within the Historic Resources Study Area. The majority of the lands within the Historic Resources Study Area experienced little to no further development after a wave of post-Civil War immigration and remain primarily rural and agricultural in nature.

Inset 2. 1891 Atlas of Huron County, Ohio

Inset 3. 1896 Atlas of Seneca County, Ohio

Late nineteenth century historic maps showing established transportation routes and development consistent with present-day conditions (Mesnard, 1891; Rerick, 1896).

3.4 Previously Identified Historic Resources

A review using the archives and repositories described in Section 2.3 above was conducted for previously identified historic resources located within the APE for Indirect Effects, based on the Mannik and Smith Group *Historic/Architectural Survey Plan* (MSG, 2019) and consultation with OHPO.

A total of 352 previously identified historic resources are located within the APE for Indirect Effects:

- Five properties listed on the NRHP (Spacecraft Propulsion Research Facility [85002802], Heter Farm [79001941], Heter Barn [79003646], Hunts Corners Historic District [93000896], and Omar Chapel [87001982])
- Five properties determined by OHPO to be eligible for listing in the NRHP
- One bridge (TR 80 over Royer Ditch) identified by Ohio Department of Transportation (OHDOT) to be eligible for listing in the NRHP
- 299 properties identified in the Ohio Historic Inventory (OHI) that have not been formally given a determination
 of NRHP-eligibility by OHPO
- 42 cemeteries identified by the Ohio Genealogical Society (OGS)

No previous historic resources surveys have been completed within the Historic Resources Study Area.

4.0 RESULTS OF FIELD INVESTIGATION

4.1 Conditions and Constraints

Site visits were conducted the weeks of January 13-17, January 27-31, February 10-14, and March 9-13, 2020. Weather conditions during the site visits were typical of the season with average temperatures between 35- and 45-degrees Fahrenheit during fieldwork with minimal precipitation, clear visibility, and variable conditions including overcast, partially cloudy, and sunny skies. Weather did not adversely affect the ability to conduct the Historic Resources Survey.

Views from public rights-of-way within the Historic Resources Study Area are dominated by agricultural farmland, farmsteads, rural cemeteries, and rural residential development divided by transportation corridors including multi-lane interstate highways, paved state routes, paved county highways and paved or gravel township roads. The land within the Project Area has been mostly cleared for agriculture and is relatively level. Existing developed features in the Project Area include electric transmission lines, an electric substation, communication towers, public roads, single family homes, and farm buildings.

The area within the Historic Resources Study Area is rural and lightly populated. Development occurs at a very low density and is for the most part widely spaced along, and near the edge of, roadways. Residential styles primarily include vernacular folk houses, contemporary ranch, modular homes, and scattered historic Classical Revivals, Victorians, and Colonial Revivals. Agricultural development ranges from small family farmsteads that include a residence, barn, and shed, to large agricultural industrial complexes. When not interrupted by woodlots, the relatively level topography within the Historic Resources Study Area allowed for clear views to historic resources. Views to farmhouses and agricultural buildings within large scale farming landscapes were dependent on their distance from the public rights-of-way. For the purpose of assessing a property's historic significance, buildings that were set too far from the road to discern substantive details were classified as "Unable to Determine". The entirety of Webb Settlement Road in Norwalk was closed, preventing access to public rights-of-way.

4.2 Results of Field Investigation

A total of 1,062 properties were surveyed within the APE for Indirect Effects, which includes both previously identified and newly identified resources. Of the 352 previously identified historic resources³:

Five NRHP-listed properties are located within the APE for Indirect Effects:

³ This total reflects the overall number of resources surveyed. Two resources, the Henny Barn (79003646), and Spacecraft Propulsion Research Facility (85002802) are accounted for in two categories but are only counted once in the total of surveyed resources.

- o No change is recommended for three NRHP-listed resources (Heter Farm [79001941], Hunts Corners Historic District [93000896], and Omar Chapel [87001982]).
- One NRHP-listed property, the Spacecraft Propulsion Research Facility (85002802) is located on the NASA Plum Creek Research Station, and was not publicly accessible, and was therefore not able to be evaluated.
- One NRHP-listed property (Henny Barn [aka Clarence Drown Barn] [79003646]) was found to be no longer extant⁴.
- Four properties that were identified in the Ohio Historic Inventory as not having been formally evaluated for NRHP eligibility status by OHPO (J. P. Heymann House [HUR0007501], Zion Evan Reformed Church [HUR0007601], Clarence Drown House [SEN0054605], and Clarence Drown Barn [SEN0054505]) were found to be contributing resources to properties previously listed on the NRHP.
- A total of 71 properties were found to be no longer extant (including the NRHP-listed property previously mentioned).
- A total of 60 properties appeared to satisfy NRHP eligibility criteria.
- 34 properties were not visible from the public right-of-way or could not be located in the field (including one NRHP-listed property mentioned above).
- The remaining 180 properties did not appear to satisfy NRHP eligibility criteria.

The addresses, type, and date of construction, as well as whether or not the property appears to satisfy the eligibility criteria for listing on the NRHP are detailed in a table format in Appendix C. Photographs of each previously identified property are included as Appendix D.

Of the 710 newly identified historic resources, which included all properties within the APE for Indirect Effects that appeared to be at least 50 years old:

- EDR identified a total of 24 properties (22 individual properties and two thematic groups) that appeared to satisfy the eligibility criteria for listing on the NRHP.
- A total of 665 properties did not appear to satisfy the eligibility criteria for listing on the NRHP.
- The remaining 21 properties were partially visible from the right-of-way but were unable to be formally
 evaluated due to the distance from the road, or intervening vegetation obscuring the view.

⁴ Note: The Clarence Drown Barn (SEN0054505) appears to be a duplicate of the NRHP-listed Henny Barn (79003646) on OHPO's online web mapping service.

Newly identified properties that appeared to satisfy the eligibility criteria for listing on the NRHP are discussed by county in Sections 4.2.1 through 4.2.4. The two thematic groupings, farm worker housing and district schoolhouses, are discussed in further detail in Section 4.2.5. In addition, per January 2020 consultation with OHPO, there are seven representative examples of housing types common to the APE for Indirect Effects that do not that appear to satisfy the eligibility criteria for listing on the NRHP, which are discussed in Section 4.2.6.

The addresses, type, and date of construction, and whether or not the property appears to satisfy the eligibility criteria for listing on the NRHP are detailed in a table format in Appendix E. Photographs of each newly identified property are included as Appendix F.

4.2.1 Erie County

A total of four properties were newly identified in Erie County that appear to satisfy NRHP eligibility criteria.

9519 State Route 99 N, Monroeville (ERI0267810)

This is a one-and-one-half-story, side-gable house constructed of locally quarried limestone (Inset 4). It is five-bays wide with a center entry, metal roof, and replacement six-over-six-windows. A one-story, vinyl clad wing extends to the south. The massing and partial cornice return indicate a mid-nineteenth century construction date with Greek Revival influences. This is consistent with the construction date of 1835 provided on the property record (Erie County, 2020). A large, modern, pole-barn and four wood-frame sheds are located west of the house. The barn is sided in metal and appears to date to circa 2000. The four sheds are sided in wood, with asphalt roofs, and are site on poured concrete foundations. There is also a small limestone outbuilding directly behind the house. At just under six acres, the property is significantly smaller than it was historically. It appears on the 1874 Combination Atlas Map of Erie County, by Stewart and Page as consisting of 268 acres, and on the 1896 Illustrated Atlas and Directory of Erie County, Ohio by the Atlas Publishing Co. as 285 acres (Stewart and Page, 1874; Atlas Publishing Company, 1896). This house is a good example of the use of limestone construction common to Erie County and it retains a moderately high degree of integrity of location, materials, workmanship, and design. Coniferous limestone is noted as the most important geological feature in Erie County. The upper portion of the limestone, which is formed in layers, is blue in color and known as "Sandusky stone" and was popularly used for building and paving. The lower layer is lighter in color, composed largely of fossils and decomposing organic matter. Quarries and limekilns were prevalent in the city of Sandusky and the islands in Lake Erie during the nineteenth century. Many facilities are still in operation as limestone and crushed stone quarried in Erie County continue to be used for construction of buildings and roadways (Peeke, 1916; Sandusky History, 2015).

Inset 4. 9519 State Route 99 N

8901 State Route 113, Bellevue (ERI0269110)

This is a two-story, front-gable, brick house with a two-story, side-gable wing projecting to the west (Inset 5). The principal block is three-bays wide with a center entry, asphalt roof, and wood six-over-six windows framed by wood shutters. The wing is wood framed, sided in clapboard and has a farm porch running the width. The massing and partial comice return indicate Greek Revival influences, which is consistent with the construction date of 1820 provided on the property record and construction materials (Erie County, 2020). A wood-frame, gable-roofed barn is located south of the house. A second barn, located across the road and within a stand of trees, is in very poor condition and near collapse. The house, and a barn that is no longer extant, are included on the 1874 *Combination Atlas Map of Erie County*, by Stewart and Page, shown within a 112-acre parcel that closely reflects the modern boundaries (Stewart and Page, 1874). The property is notable as a vernacular example of the Greek Revival style. The house is in fair condition, but retains a high degree of integrity of materials, location, setting, and design. Retaining the majority of its original acreage and agricultural setting, the property is also a good example of a nineteenth-century rural farmstead grouping consisting of a house and outbuildings association with the agricultural development of northern Ohio.

Inset 5, 8901 State Route 113

8401 State Route 113, Bellevue (ERI0269210)

This is a two-story, side-gable, brick house with a full-height portico spanning the façade (Inset 6). The house is three-bays wide with a center entry topped by a transom light. The entry is flanked by double-hung windows each with a similar window aligned above; there is no window in the center on the second floor. All windows appear to be vinyl and have painted stone lintels. The property record provides a date of construction of 1875 (Erie County, 2020) which is plausible based on historic mapping and architectural influences. The house is on a separate parcel from the outbuildings and land, but they are under the same ownership. The two parcels total 192 acres. Compared to historic mapping this appears to be the result of two adjacent parcels, each consisting of approximately 150 acres, being combined then the northern section was lost to a right-of-way for the railroad (Stewart and Page, 1874; Atlas Publishing Company, 1896). Sited behind the house are four barns. Visibility from the road is limited but it appears that the easternmost barn is a modern pole barn with metal siding, while the remaining four are wood frame and likely dating to the early nineteenth century. From at least 1860-1880 the property was owned by Philip Bath, a farmer and English

immigrant (USCB, 1860; 1870; 1880). The property is notable as an example of a mid-nineteenth century farmstead that retains a high degree of integrity of location, setting, design, and feeling. In addition, though vernacular interpretations of Greek Revival were common during this period in northern Ohio, the full-height portico sets this house apart. As a rural farmstead grouping consisting of a house, outbuildings, and acreage, it is also important for its association with the agricultural development of northern Ohio.

Inset 6. 8401 State Route 113

1819 Fox Road, Huron (ERI0277704)

This is a two-story, wood-frame, Foursquare derivative house with a hipped roof (Inset 7). Approximately one-half of the façade is composed of a projecting two-story bay with a gable-roofed dormer above. A hipped-roofed dormer is centered on each side roof plane. A one-story, screened porch spans nearly the full width of the façade; it is supported by flared wood columns on cast-stone piers. Windows appear to be wood, one-over-one, siding is clapboard, the roof is asphalt, and the foundation is concrete block. Also on the property, which consists of 116 acres, are two barns, a shed, and a metal grain silo located north of the house. One of the barns appears to be wood frame with a gambrel

roof and the other is a metal sided pole barn. The property record provides a date of construction of 1916, which is consistent with architectural influences. However, a house is present at this location on the 1896 *Illustrated Atlas and Directory of Erie County*, which, combined with the use of cast-stone for the foundation indicates a mid-1890s construction date (Atlas Publishing Company, 1896; Erie County, 2020). The house is an excellent example of Foursquare type house with Colonial Revival influences retaining a high degree of integrity of location, setting, design, and materials. It is also notable as an example of a nineteenth-century rural farmstead grouping consisting of a house and outbuildings and for its association with the agricultural development of northern Ohio.

Inset 7. 1819 Fox Road

4.2.2 Huron County

A total of 10 properties were newly identified in Huron County that appear to satisfy NRHP eligibility criteria.

5309 Willard West Road, Willard (HUR0072508)

This is a two-story, three-bay, brick house with a hipped roof and a full-width, one-story porch on the façade (Inset 8). It appears to have two side-by-side front doors, one of which is blocked by shutters. Another door is centered on the second floor over the porch. Windows appear to be vinyl six-over-six, double-hung units and feature stone sills and lintels. A wide fascia board with racetrack motifs separated by single brackets encircles the building. The porch is supported by cast stone columns and piers, with cast stone block railing. Modillions underscore the porch roof eave. A modern, one-story addition with an open porch project from the center of the east elevation. Property records indicate the house was built in 1875, which is consistent with architectural influences, though the porch is an early twentieth century addition (Huron County, 2020). A building first appears at this location on the 1873 Atlas of Huron County as part of a 101-acre farm belonging to P. Koder (Lake, 1873). Directly south of the house are a one-car garage and a wood-frame, L-shaped, gable-roof barn. The property is an excellent example of a house type very common to north-central Ohio, a hipped-roof house on a square footprint, with a full-width porch. This example, executed in brick with Italianate-style influences, retains a high degree of integrity of location, design, materials, and workmanship. The use of cast stone for porch columns and railings is a common turn-of-the-century feature on rural homes in north central Ohio.

Inset 8. 8309 Willard West Road

6157 State Route 113, Bellevue (HUR0080401)

This is a two-story, front-gable, brick house with a two-story, side-gable wing extending to the east (Inset 9). The principal block is three bays wide with the main entry positioned in the right-hand bay; the wing is four bays wide. The roof is asphalt shingles, and windows appear to be a combination of wood, six-over-six and vinyl one-over-one with stone lintels. A hexagonal window is located under the gable on the façade. The entry features sidelights and a transom and is protected by a flat-roofed portico supported by smooth Doric columns and pilasters. Based on historic maps, settlement trends, and architectural influences the house was likely constructed mid-nineteenth century. Three pole barns all constructed between 1987 and 1998 are located southwest of the house. Historically the property extended north of State Route 113, encompassing approximately 41 acres, whereas it is presently 5.5 acres (Mesnard, 1891; Huron County, 2020). The property is notable as an example of a mid-nineteenth century vernacular Greek Revival residence that retains a high degree of integrity of location, design, workmanship, and materials.

Inset 9, 6157 State Route 113

5679 State Route 113, Bellevue (HUR0080701)

This is a two-story, front-gable, brick house on a raised, limestone foundation (Inset 10). The house is three-bays wide and the entry is set in the right-hand bay flanked by smooth, Doric columns within a recessed doorway. Windows appear to be wood, six-over-six with stone lintels and sills framed by wooden shutters. A wood-frame addition extending to the east is composed of a one-and-one-half-story, front-gable front section nearest the principal block, and a one-story, side-gable section attached to that. The wing is sided in asbestos shingles. The property record provides a date of construction of 1846, which is consistent with architectural influences and historic maps (Huron County, 2020). A house appears to be present at this location as early at 1859 on the *Map of Huron County Ohio* (Nunan, 1859). Two early twentieth century wood-frame garages, and a modern, metal sided pole barn are located south of the house. The property is notable as an example of a mid-nineteenth century vernacular Greek Revival-style residence that retains a high degree of integrity of location, design, workmanship, and materials.

Inset 10, 5679 State Route 113

3341 State Route 4, Bellevue (HUR0081101)

This is a two-story, hip roofed, brick, Foursquare-type house with Classical Revival-style influences (Inset 11). It is two bays wide with a gable-roofed dormer containing a Palladian window over the left-hand bay. An open, full-width porch with a center stair is supported by cast stone lonic columns and it has a cast stone block railing. The door is on center, flanked by fixed picture windows topped by leaded glass transoms. Remaining windows are one-over-one with stone sills and lintels; the foundation is cast stone block, and the roof is slate. A one-story, modern addition extends from the rear. The property record provides a date of construction of 1913, which is consistent with architectural influences and construction materials (Huron County, 2020). Adjacent to the house is a two-car, concrete block garage and northwest of the house is a wood-frame barn with vertical plank siding and a sliding door on the gable end. The property is notable as an example of an early twentieth century vernacular Classical Revival-style residence that retains a high degree of integrity of location, design, workmanship, and materials. The use of cast stone for structural and decorative porch elements was widespread in north central Ohio during the first quarter of the twentieth century as the material gained

popularity. Porches of this design were often added to existing home but in this instance, it was likely part of the original design based on the date of construction.

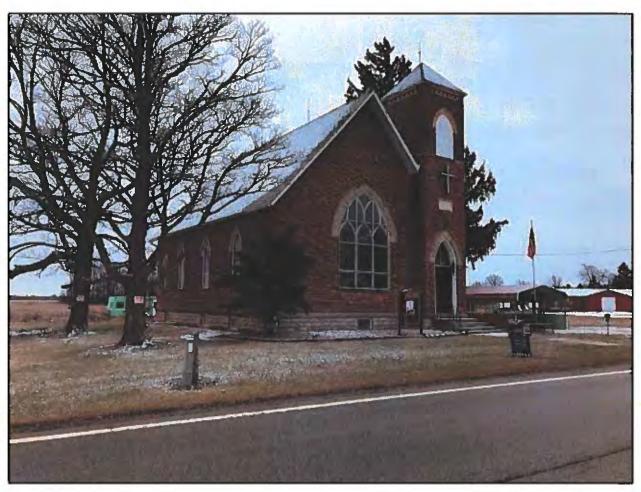

Inset 11. 3341 State Route 4

2874 State Route 4, Bellevue (HUR0081401)

This is a front-gable, brick, Gothic Revival church building that is now used as a single-family residence (Inset 12). It is set on a rectangular footprint with a two-story, square tower topped by a pyramidal roof on the southwest corner. All visible penetrations have pointed arch tops with stone drip molding. A single large window occupies the center of the façade under the gable, four windows run along each elevation, and there is a window on the southwest side of the tower. The entrance, consisting of paired wooden doors topped by a pointed arch transom, is set in the tower facing the road. On each wall of the tower on the second level is a pointed arch opening that has been blocked over with vinyl siding. The property record provides a date of construction of 1906 but based on architectural influences and historical records the date is circa 1870. It appears on an 1873 Atlas of Huron County Ohio labeled as a Lutheran Church (Lake,

1873). The building as a very good example of a Gothic Revival-style rural church that retains a high degree of integrity of location, setting, design and workmanship. The majority of materials appear to be original as well.

Inset 12. 2874 State Route 4

5360 US Highway 20 East, Bellevue (HUR0081801)

This is a two-story, cross-gable, Queen Anne-style house (Inset 13). The nearly symmetrical façade consists of a projecting center bay flanked by open, shed-roofed porches. A gable-roofed dormer projects over the left-hand porch. The center bay has a picture window topped by a leaded-glass transom and the remaining windows are rectangular one-over-one, and all have splayed brick arch lintels. The porch eaves are underscored by spindle work frieze and quarter-round brackets supported by turned posts. Gables also have spindle work brackets. Architectural influences indicate a date of construction circa 1875. A house is present on the site on the 1873 *Atlas of Huron County, Ohio* (Lake, 1873). Also on the property are six outbuildings. Directly behind the house is a one-story, wood-frame garage. West of the house, facing the road is a wood-frame bank barn with vertical plank siding and a high drive accessing a sliding door on the broad side and a shed-roofed addition on the rear. Other structures are a steel carport, a wood-

frame shed, a steel Quonset hut, a steel and plastic greenhouse, and a one-story garage. The barn is an intact example of a late-nineteenth English-style barn that indicates the property was historically a farmstead. The property is notable as an example of a vernacular Queen Anne-style residence that retains a high degree of integrity of location, design, workmanship, and materials.

Inset 13. 5360 US Highway 20 East

4191 State Route 547, Monroeville (HUR0085501)

This is a two-story, front-gable, brick house with a two-story, side-gable wing extending to the east (Inset 14). A one-story, screened porch spans the principal block and wraps the corner to the wing where it meets a recessed screened porch. Above the porch on the principal block there is a door in the left-hand bay indicating a second story porch that is no longer extant. Windows appear to be six-over-six, undetermined material, with stone lintels and sills; a rose window is located in the gable. Deep eaves are underscored by single brackets. The property record provides a construction date of 1853, which is plausible based on settlement patterns, historical mapping, and architectural influences. The massing and fenestration indicate Greek Revival style influences, while the brackets and screened

porches were likely part of a circa 1900 renovation. The house appears on the 1853 Atlas of Huron County, Ohio, consisting of 100 acres that straddled all corners of the intersection of modern-day County Route 547 and Town Line Road 32, under the ownership of "I. Banta". Acreage and ownership remained the same as of 1873 (Nunan, 1853; Lake, 1873). Today the parcel totals approximately 12 acres and no longer serves an agricultural purpose. Also on the property is a wood frame, gambrel roofed barn with vertical plank siding and sliding doors on the broad side and a wood-frame, gable-roofed barn, both on concrete block foundations. A third outbuilding is a concrete block garage; all outbuildings appear to date to the early to mid-nineteenth century. The property is notable as an example of a vernacular residence on a former farmstead that retains a high degree of integrity of location, design, workmanship, and materials. The house is a record of architectural influences spanning half a century.

Inset 14. 4191 State Route 547

1018 Section Line Road 30, Bellevue (HUR0088205)

This is a two-story, wood-frame, Italianate-style house with a hipped roof (Inset 15). It is three bays with the entry in the left-hand bay fronted by a one-bay wide porch with arched brackets. Shallow, single brackets underscore the eaves

of the main roof. Attached on the north side is a one-and-one-half-story, front-gable section with a full-width, shed roofed porch. Windows are a mix of wood two-over-two, wood one-over-one, and vinyl one-over-one. There are no outbuildings. The house appears first appears on the 1859 *Map of Huron County Ohio.*, on the property of Peter Ruffing, indicating a likely mid-nineteenth century date of construction for the gable-roofed section (Nunan, 1859). The section that is now the main house was possibly added between 1860 and 1870. The property is notable as an example of a vernacular interpretation of the Italianate style that retains a high degree of integrity of location, design, workmanship, and materials.

Inset 15. 1018 Section Line Road

4179 State Route 162, Willard (HUR0096005)

This is a two-story, three-bay, square, brick house with a hipped roof (Inset 16). The entry is in the center bay, framed by sidelights and a transom light. Windows appear to be wood six-over-six with stone sills and lintels. The roof is sheathed in metal standing seam and is underscored by brackets. The entire property is partially obscured by overgrown vegetation, making clear identification of materials difficult. The property record provides a date of

construction of 1820 (Huron, 2020). Based on architectural influences the date may have been slightly later, circa 1840. Historical mapping shows the property as being owned by Dennison (Denason) Niver from at least 1859 to 1891. As of the earliest date the parcel included 250 acres plus a lot across the road to the north that later contained a blacksmith shop (Nunan, 1859; Lake, 1873; Mesnard, 1891). West of the house is a side-gable, metal sided barn with a similarly framed barn attached perpendicular at the west end. The property is notable as an example of a vernacular interpretation of the Greek Revival style that retains a high degree of integrity of location, design, workmanship, and materials.

Inset 16. 4179 State Route 162

4458 North Greenfield Road, Willard (HUR0098105)

This is a two-story, side-gable, wood frame house with a full-width porch (Inset 17). The house is five bays wide with a center entry; a one-and-one-half-story addition extends from the rear. The porch has a hipped-roof and is supported by cast stone columns and cast stone block piers and foundation. Railings are composed of brick. Windows appear to be wood, six-over-one, double-hung units, siding is wood shingles, and the roof is asphalt. The eaves are underscored

by knee brackets and exposed rafter tails. Based on the *Map of Huron County Ohio* a house was on this site as early as the late 1850s, but window configuration, siding material, and Craftsman details indicate a significant renovation circa 1915 (Nunan, 1859). North of the house are three agricultural outbuildings, a side-gable barn, a hipped-roof shed, and a one-story saltbox shed. The property is notable as an example of a nineteenth-century rural farmstead grouping consisting of a house and outbuildings and for its association with the agricultural development of northern Ohio. The property appears abandoned and the buildings neglected. However, as a collection they retain a moderately high degree of integrity of location, design, and feeling.

Inset 17. 4458 North Greenfield Road

4.2.3 Sandusky County

A total of two properties were newly identified in Sandusky County that appear to satisfy NRHP eligibility criteria.

211 Kilbourne Street, Bellevue (SAN0062412)

This is a two-story, wood-frame house with a cross-gable roof (Inset 18). The house is a vernacular interpretation of the Queen Anne-style and includes turned porch posts joined by a spindle work frieze, scroll-cut vergeboards and gable brackets, and a polychromatic paint scheme. The center projecting mass contains a picture window on the first story capped by a shallow, decorative gable roof centered between two one-over-one, double-hung windows on the second floor. The entry is off an open porch in the interior corner of the left-hand side of the house. Windows appear to be wood one-over-one, siding is clapboard, and the roof is asphalt shingles. The house first appears on an 1893 Sanborn Fire Insurance Map with a footprint and porch configuration matching the current conditions (Sanborn, 1893). A construction date of circa 1890 is consisted with late-Victorian-era architectural influences. The property is very good example of a vernacular Queen Anne-style house that retains a very high degree of integrity of location, design, materials, and workmanship.

Inset 18, 211 Kilbourne Street

5821 State Route 101, Clyde (SAN0063412)

This is a one-and-one-half-story, side-gable, Flemish-bond brick house with a perpendicular one-story wing projecting from the rear (Inset 19). The wing has a recessed entry porch and a non-functional barn door on the northeast elevation. The principal block is three-bays wide with a center entry and sits on a field-stone foundation. The majority of windows are wood six-over-six, double-hung units with the exception of three three-light, knee-wall windows under the eave along the façade. All are topped by vertical brick lintels. The house lacks any ornamentation. The property record card states that the house sits on a 100-acre parcel (Sandusky, 2020). Based on architectural influences and historical mapping the house likely dates to circa 1860. It is present on an 1874 *Combination Atlas Map of Sandusky County.* though no acreage is listed. By 1898 the property bounds are similar to the current lines and the parcel is identified as consisting of 125 acres owned by "R. Sparks" (Everts, Stewart and Co, 1874; Hopple, 1898). The property is notable as an example of a vernacular farmhouse with a very high degree of integrity of location, materials, and design. In addition, it retains an expansive acreage that is still in agricultural use, lending to its integrity of setting.

Inset 19. 5821 State Route 101

4.2.4 Seneca County

A total of six properties were newly identified in Seneca County that appear to satisfy NRHP eligibility criteria.

6971 North State Route 18, Bellevue (SEN0128705)

This is a two-and-one-half-story, Queen Anne-style residence with asymmetrical massing; a steep, cross-gabled roof; and an octagonal turret (Inset 20). A wraparound porch has a low, hipped roof supported on lonic columns atop a stone or concrete masonry unit balustrade. The siding appears to be vinyl and the roof is finished in asphalt shingle. A ball finial atop the turret roof appears to be sheet metal. The windows are generally one-over-one single- or double-hung sash, except for fanlights in the gable ends. The building has a single-story rear addition. A three-bay, gable-roofed barn with wood siding and a metal roof is located to the southwest of the house, and a single-story shed with a gable roof is sited west of the barn. The current property, just over two acres, was partitioned from a 189-acre agricultural lot after 1896, and possibly prior to or soon after the house's construction by 1915 (Rerick Brothers, 1896; USGS, 1915). The property retains its historic agricultural setting. It is notable as an example of a nineteenth-century rural farmstead grouping consisting of a house and outbuildings and for its association with the agricultural development of northern Ohio.

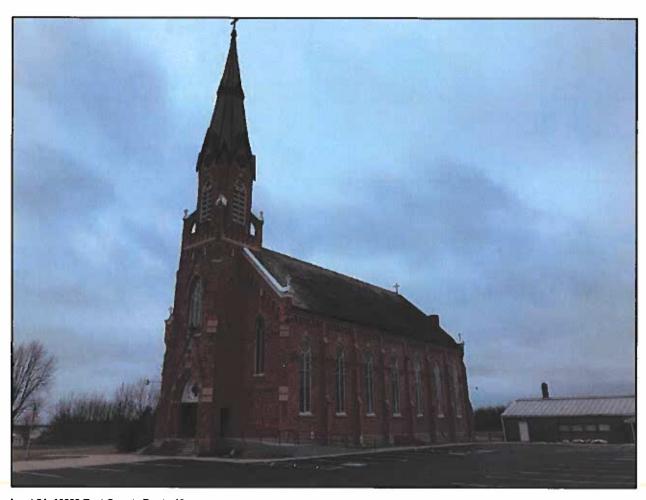

Inset 20. 6971 North State Route 18

16209 East County Route 46, Bellevue (SEN0130605)

Saint Gaspar del Bufalo is a Roman Catholic church built in 1884 in the Victorian Gothic style (Inset 21). It is rectangular in plan, with a projecting tower at the south and a projecting bay forming the apse at the north. The exterior is characterized by flat planes of brick in a running bond, punctuated with decorative brick corbeling and patterned brick stringcourses, atop a rusticated stone foundation. Sills, copings, arch voussoirs, and other details are of stone. The building has a steeply pitched gable roof clad in asphalt shingle. The structure is three bays wide and seven bays deep, with each bay on the east and west facades defined by buttresses and containing a gothic-arched, stained-glass window with wood tracery. A square tower projects from the center of the principal (south) façade and contains the principal entrance within an arched portico beneath a large stained-glass window. Angled buttresses define the corners of the tower, rising into flying buttresses where the square tower transitions to an octagonal belfry level. The cardinal facets of the octagonal section feature louvered gothic-arched openings below oculus windows. The tower is topped with a slate-clad steeple roof surmounted by a copper finial in the shape of a cross.

To the west of the church and set back from the road is a two-story, brick parsonage with a cross-gabled and hipped asphalt roof and a full-width porch with Queen Anne details. The house has one-over-one windows with stone sills and rests on a stone foundation. It is estimated to have been built between 1880 and 1900. A modern, single-story structure (presumably a parish hall) is located at the rear of the property, northeast of the church. A former convent is located immediately to the east. A cemetery associated with the church is located further east and set back from the road.

The church was established by the Precious Blood Society, a Catholic order formed in 1815 by St. Gaspar del Bufalo (Woods, 1891; Missionaries of the Precious Blood, 2020). Missionaries of the Precious Blood, led by Fr. Francis de Sales Brunner, arrived in central and western Ohio from Europe in 1844 to serve the region's German-speaking Catholic community. A church was established on the site by 1848. In 1850, Brunner built a chapel on a nearby site which would become the Sorrowful Mother Shrine (Sorrowful Mother Shrine, 2020). By the 1890s, the society owned parcels totaling over 230 acres to the north and south of present-day County Route 46 in the Township of Thompson, Seneca County (Woods, 1891). St. Gaspar del Bufalo church, then known as St. Michael's, was built in 1884, replacing an earlier church structure built in 1848 (Warner, Beers & Co., 1886). The Missionaries established several churches in Ohio and Indiana, as well as Saint Joseph's College and Calumet College, both in Indiana (Missionaries of the Precious Blood, 2020). The church and parsonage are notable as an intact example of ecclesiastical architecture in rural Ohio, as well as for their association with the Precious Blood Society and with Ohio's German-American community.

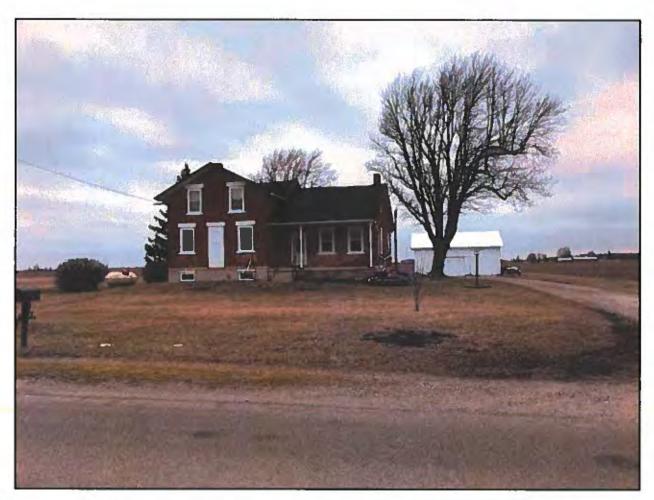

Inset 21. 16209 East County Route 46

16977 County Route 46, Bellevue (SEN0130805)

This is a one-and-one-half-story vernacular brick residence with a gable-and-ell form (Inset 22). The roof is clad in metal and the foundation is of parged masonry, with a stone water table on the principal façade only. The gable-front portion, to the west, contains a centered entry door on the first floor flanked by one-over-one windows, with a pair of one-over-one windows on the upper half-story. The door is not in use and stairs leading to it have been removed. A small, single-light window is tucked under the eave of the half-story on the west façade. The single-story, side-gabled portion to the east contains two one-over-one windows and an entry door within a porch supported by slender Doric columns resting on a stone or concrete masonry unit base. The windowsills and lintels are likely of stone but appear to be painted. Brick chimneys rise from the roof ridge near the south and east gable ends. A three-bay barn with a metal roof is located northeast of the house. The house was likely built prior to 1864, when it appears on 1864 *Map of Seneca Co., Ohio* as the residence of J. Westrick (Lake, 1864). The two-acre lot was partitioned from a 55-acre parcel sometime after 1890 (Woods, 1891). Although the lot is reduced in size, the property retains its historic agricultural setting. The

property is notable as an example of a mid-nineteenth-century rural farmstead grouping consisting of a house and barn, and for its association with the settlement and agricultural development of northern Ohio.

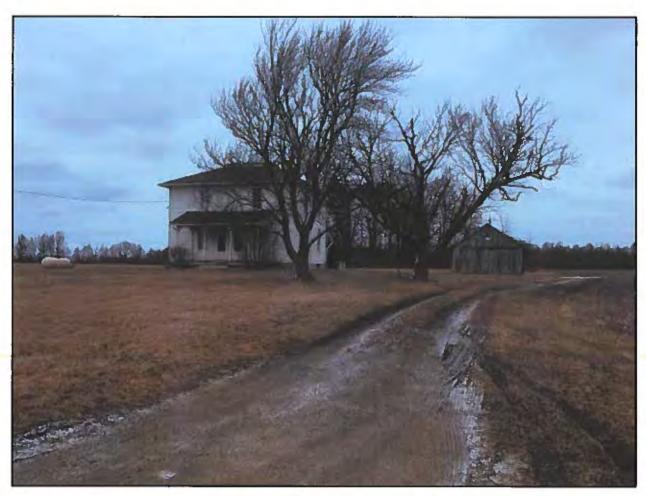

Inset 22, 16977 State Route 46

12675 East Township Road 8, Republic (SEN0136512)

This is a two-story wood frame double house in a vernacular interpretation of the Italianate style (Inset 23). It is square in plan with symmetrically arranged facades atop a stone foundation and with a low, hipped roof. The exterior walls are clad in clapboard and the roof is asphalt. A wide front porch supported on turned posts with brackets contains paired entry doors. With the exception of those at the basement level, windows are one-over-one, and may be original. As a vernacular interpretation of the Italianate style, floor heights are relatively low and, though it is not known whether the eaves were originally bracketed, the narrow fascia suggests they may have been unadorned. A flat portion at the peak of the hipped roof suggests a cupola may have been present. A small barn with a metal roof, vertical board siding, and a sliding door is located to the northeast of the house. The house appears to have been built after 1864, when it appears on the *Map of Seneca Co., Ohio* as the property of W. (William) Anway, and prior to 1874, when it appears on the

Combination Atlas Map of Seneca County as the property of Phoebe J. Anway (Lake, 1864; Stewart, 1874). The property is still in agricultural use and retains its historic 80-acre size. The property is notable as an example of a vernacular Italianate farmhouse, a type and style of residence common to nineteenth-century rural Ohio and retaining a high degree of integrity of setting, materials, workmanship, and feeling.

Inset 23. 12675 East Town Road 8

14921 East Township Road 122, Republic (SEN0137312)

This is a one-and-one-half-story vernacular wood-frame residence with a gable-and-ell form (Inset 24). The exterior is clad in wood clapboard and the foundation is of cut stone. The slate roof features bands of decoratively shaped slates. The front-gable portion to the east is two bays wide, with symmetrically arranged windows on the south and east facades. The side-gable portion to the west features a two-bay-wide entry porch with Queen Anne details. Two doors lead inside from the porch. Windows are generally one-over-one. There are basement windows at the east and west, and a triple, casement window at the first floor of the west façade. There is a single-story extension at the rear of the house, which shares the same siding and roofing materials as the main volume. The house was likely constructed prior

to 1864, when it appeared on the *Map of Seneca Co., Ohio* as the farm and residence of Joseph Bogner (1836-1907), an Alsatian immigrant (Lake, 1864; Find A Grave, 2020). The barn appears to date from about the same time. The property retains its historic 80-acre size and is still in agricultural use. A small shed with a metal roof and vertical wood siding is located to the rear of the house. To the west is a four-bay barn with a metal-clad gable roof and vertical wood board siding. Three pairs of sliding doors are located on the south façade, and another pair is located on the east. The property is notable as an intact example of a mid-nineteenth-century farmstead. The house is a very good example of a vernacular farmhouse, a type and style of residence common to nineteenth-century rural Ohio and retaining an unusually high degree of integrity of setting, materials, workmanship, and feeling.

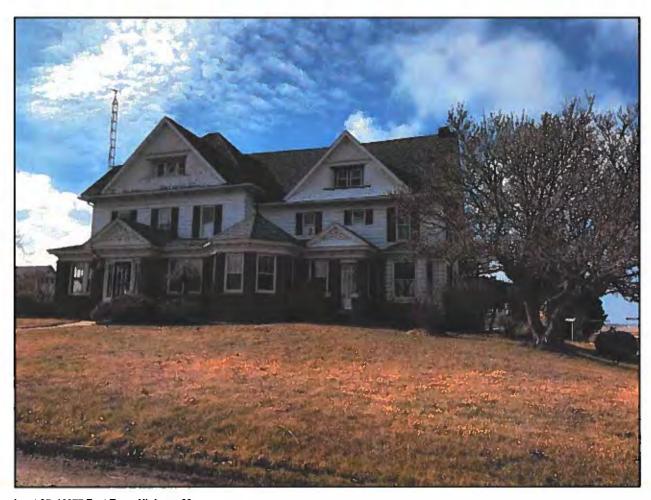

Inset 24. 14921 East Town Road 122

16977 East Town Highway 88, Attica (SEN0142017)

This is a large, two-story wood-frame house in the Queen Anne style (Inset 25). It is roughly L-shaped in plan, consisting of two main rectangular volumes with multiple crossed roof gables and an enclosed, full-width front porch. The exterior is clad in a replacement material at the first and second floors, and in wood shingle with octagon butts at the gable

ends. Windows in the gable ends of the principal façade are recessed, with the shingle-clad wall surface curving inward to meet the jambs. The roof is clad in asphalt shingle, and projects atop modillions at the main eave. A brick chimney rises from the main roof ridge at the north; a second, exterior brick chimney pierces the roof eave at the rear (west) façade. The full-width porch on the principal façade appears to have been enclosed with brick piers and spandrels and three-over-one windows in the early twentieth century. The main entry to the porch features a door with divided lights and sidelights, while a second porch entrance has a similar door without sidelights. The complex roof of the porch features gables with sawn ornament in a scroll motif over each entrance, with an octagonal roof topped with a finial between them. The porch roof eaves contain modillions and dentil molding. Excepting those on the porch, windows are generally one-over-one. A fixed-sash window in one of the main roof gables features a diamond-shaped pane surrounded by smaller square panes. Based on historic imagery, wood clapboard siding was covered or replaced and nonoriginal shutters were added between 2008 and 2020 (Google, 2008). A rear addition consists of a single-story gable-roofed projection and a single-bay, gable-roofed garage. The property includes a carriage barn across the road, which has clapboard siding and dentil molding below an overhanging, flared gable end featuring shingles with octagon butts. The gable roof clad in slate. The overhead door is not original. This description of the carriage house is based on 2008 imagery and may not reflect current conditions (Google, 2008).

The house appears to have been built prior to 1874, when it appears on the 1874 Combination Atlas Map of Seneca County as the residence and farm of Samuel Weaver (Stewart, 1874). The simple, rectangular massing of the two main volumes suggests an earlier structure with subsequent Queen Anne modifications through additions and roof alterations. The house is unusually large for its rural setting in northern Ohio. The property includes land on both sides of the road; however, it has been reduced to less than 1.5 acres from its historic size of more than 300 acres (one of the larger landholdings in the Township of Venice). A grouping of historic barns, including a substantial barn featuring a cross-gable roof, was originally part of the property, but is no longer part of the same parcel as the house and carriage barn. The property is notable for its association with the agricultural development of northern Ohio, as an intact example of a nineteenth-century farmhouse expanded and altered over several generations of ownership by a prosperous farming family. Although no longer part of the same parcel or under the same ownership, several historically significant agricultural buildings are still extant, and as a whole, the grouping retains a high degree of integrity of materials, setting, and feeling.

Inset 25. 16977 East Town Highway 88

4.2.5 Thematic Groupings

In addition to properties that appeared to individually meet NRHP eligibility criteria, the survey also resulted in the identification of two repetitive property types. These property types include buildings that do not individually meet NRHP eligibility requirements, but as a collection represent important contributions to the built environment and landscape within the Historic Resources Study Area. The property types are described in detail below. In addition, an I-form was completed for the best example of each property type.

Farm Worker Housing

The Historic Resources Survey identified three clusters of farm worker housing that thematically connect as examples of mid-twentieth century temporary housing associated with muck farms (see Inset 26). Construction is generally one-story, CMU block with shallow gable roofs and lack architectural detailing or ornamentation. Based on a review of aerial photography the housing at all three sites appears to have been constructed prior to 1959. The housing is important for its associations with the agricultural history in the area of Celeryville. Muck farming has been a leading industry in

this region of Ohio since the late nineteenth century. The clusters of farm worker housing are distinct in the area and easily recognizable for their design and proximity to active muck fields. They are occupied during the summer predominantly by migrant workers who harvest the crops.

Located approximately one mile south of the City of Willard in Huron County is the unincorporated community of Celeryville. An entrepreneur named Harry Johnson recognized the potential for muck farming in the area. The expansive marshes were drained and left behind rich soil ideal for growing a variety of vegetable crops, including leafy greens such as lettuce, cabbage, and celery. Johnson recruited Dutch farmers from nearby Michigan to relocate to the area, with the first settlers arriving around 1896. Celery was established as the primary crop, leading to name, Celeryville (Opsomer, 2019).

Henry Wiers was one of the first Dutch farmers to arrive in Willard from Michigan, settling in 1896 and purchasing five acres to grow celery. In 1975 they began operating under the name Dutch Maid Produce, which later became Dutch Maid Logistics. Today the company is operated by the fifth generation of Wiers family members. Having expanded to a second production location in Florida, they produce 45 different crops and distribute throughout the continental US using their own fleet of trucks and refrigerated trailers (Wiers Farm, 2016).

Two properties were identified as being associated with the Wiers family on Baseline Road and State Route 103. A third example of farm work housing located near muck fields is located on Bevier Road. This collection is comprised of at least 19 buildings clustered at a dead-end road. The property is identified in county records as being owned by John F. Stambaugh & Co (Huron, 2020).

Inset 26. Farm Worker Housing
Top to Bottom: 0 Baseline Road; 0 State Route 103; and 0 Bevier Road.

District Schools

The Historic Resources Survey identified seven schools that thematically connect as examples of late-nineteenth century district schoolhouses. These former schools included four previously identified and three newly identified examples. Extant schools surveyed are all brick construction, predominantly one-story, front-gable on a rectangular footprint. Most schools are three bays deep, and the front façade features two single entrances on intact examples (see Inset 27). The schools are important for their association with the physical development of the district school model in this region of Ohio.

The common school system, establishing public education, was approved by the Ohio state legislature in 1825, and school districts were formed to meet state requirements. One- and two-room schools were intended to be located in a grid pattern every two miles in each direction, ensuring that no child would need to walk more than two miles round-trip to attend school. By 1874 there were 162 schools throughout Seneca County. This was higher than prescribed for a county that totals 553 square miles, likely accounted for by a growing population. School numbers were assigned in a zig-zag fashion beginning at the northeast corner, moving west along the line of schools then south two miles to the next school and back to the east, and so on (Valentine, 1987).

As a thematic group, district schoolhouses represent a regionally significant building type. Although they collectively contribute to the historic landscape within the APE, these schoolhouses do not appear to satisfy the criteria for eligibility for listing in the NRHP as individual buildings or as a non-contiguous historic district due to inconsistent levels of architectural integrity.

Three schools were newly identified as part of this survey, including:

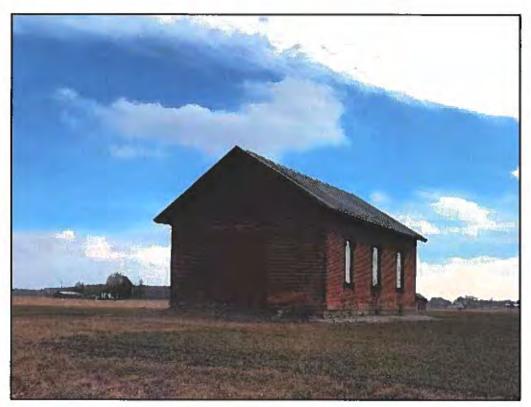

- District School No. 5 0 County Route 32, Thompson Township, Seneca County
 - Also identified as the "Thompson Center School" this unusual two-story example retains its original form and fenestration, though all windows and doors are either missing or boarded over (Valentine, 1987). It first appears on the 1896 map of *The County of Seneca, Ohio,* labeled as "School No. 5" (Rerick, 1896).
- District School No. 2 7472 Boundary Road, Cranberry Township, Crawford County
 - This is a typical, one-story example that has been altered by with the addition of a sliding barn door accessed by an earthen ramp. These changes appear to have been done with the intention of utilizing them for storage or agricultural purposes. It first appears on the 1873 Illustrated Atlas of Crawford Co., Ohio., labeled as "S.H. No 2" (Gould and Starr, 1873).
- District School No. 1 2670 Peru West Section Line Road, Peru Township, Huron County
 - This is a one-story example with an unusual configuration; the only entrance is situated off-center on the eaves side elevation. The building has replacement windows and appears to have been converted to a residence. This school first appears on the 1873 Atlas of Huron County, and is labeled as District School No. 1 in 1891 on the Atlas of Huron County, Ohio (Lake 1873; Mesnard, 1891).

Four schoolhouses included as part of this thematic group were previously identified in the OHI, including:

- District School No 8 0 South Town Road 81, Reed Township, Seneca County (SEN0127812)
- Reedtown School, District School No. 1 1700 SR 4, Reed Township, Seneca County (SEN0124212)
- Old Thompson Twp District 2 corner of TR 81 and CR 34, Thompson Township, Seneca County (SEN0112405)
- District School No. 5 10509 Pattern Tract, Oxford Township, Erie County Road (ERI0219306)

Inset 27. District Schoolhouses

Top to Bottom: District School No. 5 – 0 County Route 32; District School No. 2 – 7472 Boundary Road; District School No. 1 – 0 Peru West Section Line Road.

4.2.6 Representative Property Types

Per consultation with OHPO repetitive property types that do not appear to be NRHP-eligible but are representative of housing common to the Historic Resources Study Area have been identified. While the best examples of each type were selected and included in this section, identified by property type or style, most are vernacular examples that have been modified through the use of modern materials resulting in loss of character defining architectural elements.

Foursquare-style Residence

The property at 3809 State Route 113 West Monroeville (ERI0223306) is a two-story, wood-frame, Foursquare-style residence (Inset 28). It has a one-story, full-width, open porch on the front façade. The porch is constructed of unpainted, pressure-treated lumber. Other replacement materials include vinyl siding and windows. Although this property does not appear to satisfy NRHP eligibility criteria, it is representative of a vernacular building type common to north central Ohio. The house at 3809 State Route 113 West likely dates to the early-twentieth century and may have originally exhibited Craftsman detailing. During the 1920s large nineteenth century farms were divided into smaller parcels and there was an increase in the construction of single-family homes on smaller parcels that did not include agricultural land. Most of the residences of this type within the Historic Resources Study Area are vernacular examples

that have been modified through the use of modern materials resulting in loss of character defining architectural elements.

Inset 28. 3809 State Route 113 West

Bungalow-style Residence

The property at 4420 Campbell Street, Sandusky (ERI0275603) is a one-and-one-half story bungalow -style residence with a front gable that covers a full-width porch (Inset 29). A broad gable roofed dormer is centered on the front roof plane. The porch is supported by brick columns and it has an iron railing. Knee brackets underscore the eave. Although the property at 4420 Campbell Street does not appear to satisfy NRHP eligibility criteria, it is representative of a building type common to north central Ohio. Bungalows and one-story Craftsman inspired homes are common to the current building stock, one of the results of the previously described pattern of subdivision of larger agricultural properties that occurred in the early twentieth.

Inset 29. 4420 Campbell Street

Italianate-style Residence

The property at 4827 Pontiac Section Line Road, Monroeville (HUR0086705) is a two-story, three-bay, wood-frame Italianate-style residence with a hipped roof (Inset 30). The entry is in the center bay, flanked by slender one-over-one, double-hung windows with two of the same aligned on the second story. The roof is flat in the center, indicating the former presence of a cupola. Massing and roof form are reminiscent of the Italianate style, but brackets, window hoods, and other decorative elements that may have existed have been removed. Although, the property does not appear to satisfy NRHP eligibility criteria, it is representative of a building type common in north central Ohio. Examples would have been constructed circa 1865-1885 and are located in rural settings that were historically associated with agriculture. Houses in this category tend to retain only their form and roof line. Modifications generally include replacement materials and removal of architectural detail, thereby compromising the structure's integrity.

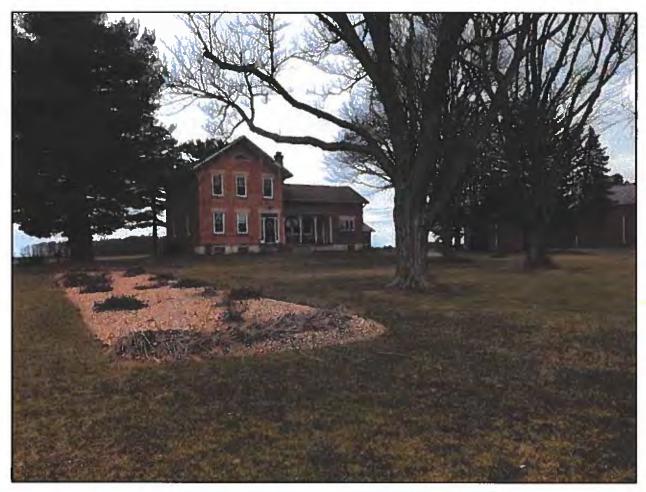

Inset 30. 4827 Pontiac Section Line Road

Greek Revival Block-and-Wing Residence

The property at 2177 Sand Hill Road, Monroeville (HUR0090805) is a two-story, front-gable, brick house with a one-and one-half-story, side-gable wing extending to the west (Inset 31). The design incorporates Greek Revival and Italianate-style influences. The principal block is three bays wide with the entry in the right-hand bay; the door is framed by side lights and a transom light. The wing is four bays wide and a porch spans the three bays nearest the principal block. The porch is supported by square posts with straight brackets meeting in the center between posts. Along the wing windows are vinyl one-over-one and vinyl casements. Remaining windows appear to be vinyl six-over-one, with stone lintels and sills. The roof is asphalt and is underscored by paired brackets lining the eaves. The property record provides a date of construction of 1826 (Huron, 2020). Circa 1840 is more likely based on architectural influences and historical mapping. A house is mapped at this location in the 1859 *Map of Huron County, Ohio* (Nunan, 1859). Also on the property is a side-gable, wood-frame barn located north of the house and two smaller gable-roofed barns that appear to be wooden. The larger barn has vertical plank siding, a standing seam metal roof, and paired sliding doors on the broad side. Visibility of the two smaller buildings is obscured by trees and structures.

Although the property does not appear to satisfy NRHP eligibility criteria, it is representative of a building type common to north central Ohio. Massing consisting of a front-gable principal block with a perpendicular wing is extremely common. The majority of examples are wood frame; however, brick examples such as this, often with brackets or other detail work, reflect a more upscale variation. As is the case here, many have been compromised through the introduction of replacement materials.

Inset 31. 2177 Sand Hill Road

Block-and-Wing Residence with Gothic Revival Influence

The property at 3337 Sand Hill Road, Bellevue (HUR0007401) is a two-story, front-gable, brick house with a one-and one-half-story, side-gable wing extending to the west (Inset 32). The design incorporates Greek Revival and Gothic Revival influences. The principal block is three bays wide with the entry in the right-hand bay; the door is framed by side lights and a transom light. The wing is three bays wide and the two bays nearest the principal block contain a recessed, open porch. Differentiating this example from other front-gable block and wing houses is a gable wall-dormer

centered above the porch, accounting for the Gothic Revival-style influence. The roof is asphalt and is underscored by single brackets lining the eaves. The property record provides a date of construction of 1860, which is consistent with architectural influences and historical mapping. A house is present in this location on the 1873 *Atlas of Huron County, Ohio* (Lake, 1873; Huron County, 2020). Although the property does not appear to meet NRHP eligibility criteria is representative of a building type common to north central Ohio. This massing is less common than the simple block and wing examples, but still prevalent. Windows appear to be vinyl, six-over-six, with stone lintels and sills.

Inset 32, 3337 Sand Hill Road

Wood-frame Block-and-Wing Residence

The property at 16323 County Route 24, Attica (SEN0133312) is a one-and-one-half-story, wood frame, gable-and-ell residence with an asphalt roof and vinyl siding (Inset 33). An exterior brick chimney interrupts the roof eave on the west façade. Windows are generally one-over-one and do not appear to be original. Other alterations include an enclosed entry porch and a substantial rear addition with an attached, two-bay garage. Two pole barns built in the 1970s and 1980s are located to the north of the house. The house may have been constructed as early as 1864, and most likely

by 1874 (Lake, 1864; Stewart, 1874). Although still in agricultural use and retaining its historic 80-acre size, this property does not appear to satisfy NRHP eligibility criteria because the house has been modified through the use of modern materials. Any historic agricultural buildings are no longer extant.

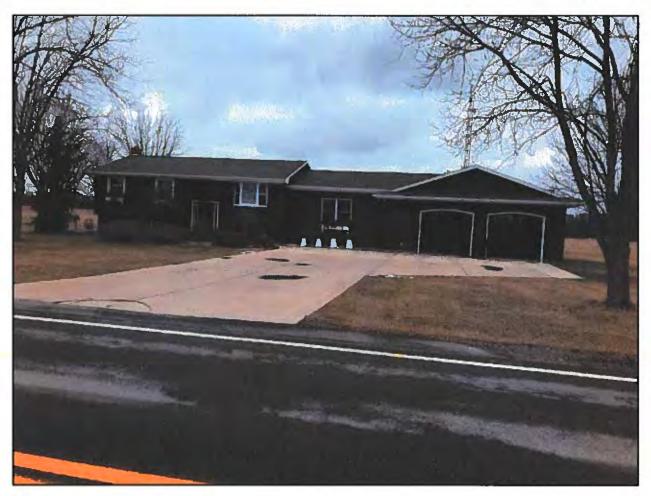

Inset 33. 16323 County Route 24

Raised Ranch-style Residence

The property at 3880 North State Route 269, Bellevue (SEN0118905) is a one-and-one-half-story raised Ranch-style residence built in the mid-twentieth century (Inset 34). It is roughly rectangular in plan, with a main side-gable volume to the south consisting of a single story atop a raised basement. This original portion of the house is connected to a gable-front, two-bay garage by a side-gable, single-story addition. Character-defining elements include the low-slung form, the cantilevered projection of the main floor over the raised basement, the entry door at grade, and a bay window. Although the property does not appear to satisfy NRHP eligibility criteria, it is representative of a building type common

⁵ Note that the OHI number listed here is associated with a previously identified resource at this location that is no longer extant.

to north central Ohio. During the twentieth century, large nineteenth century farms were divided into smaller parcels and there was an increase in the construction of single-family homes on smaller parcels that did not include agricultural land. Ranch style homes are common to the current building stock. Most are vernacular examples that have been modified through the use of modern materials and loss of character defining architectural elements.

Inset 34, 3880 North State Route 269

4.3 Expected Results versus Actual Survey Results

As described in Sections 2.5 and 3.4, based on the results of the CRRR, and the existing conditions of the Historic Resources Study Area, the survey was expected to result in the identification of relatively few historic resources which appeared to satisfy the eligibility criteria for listing on the NRHP.

A total of 1,062 properties were surveyed within the APE for Indirect Effects. Of these, three properties previously listed in the NRHP were found to have retained their historic integrity such that no change in status was recommended. A total of 84 properties were identified by EDR as appearing to satisfy the eligibility criteria for listing on the NRHP,

significantly less than expected given its percentage of the total number of surveyed properties, and 845 properties appeared to have been constructed fifty years ago or more but did not satisfy the eligibility criteria for listing on the NRHP, a number slightly higher than expected. Based on field observation, this is largely the result of wide-spread ad hoc architectural additions and material replacements to homes that compromise historic integrity, and to a lesser extent, the lack of architectural or historic significance in the properties themselves even though they may be over fifty years in age. In addition, four properties previously identified in the OHI as having no formal NRHP eligibility status were found to actually be contributing structures to NRHP-listed properties based on a review of the associated property documentation found via the OHPO web mapping service.

A total of 71 properties were found to be no longer extant, including the NRHP-listed Henny Barn (79003646). The loss of historic building stock is not uncommon in rural areas, given the predominance of functional, rather than aesthetic, building use in these areas of the state. As the agricultural sector has decreased in rural Ohio, properties are vacated, abandoned, or demolished leading to a loss of building stock.

In addition, a total of 34 previously identified properties could not be seen from the right-of-way or could not be located, including one NRHP-listed property, the Spacecraft Propulsion Research Facility (85002802). A total of 21 newly identified properties could be seen from the public right-of-way but were set too far back to make an informed determination regarding the satisfaction of NRHP eligibility criteria.

5.0 SUMMARY AND CONCLUSION

5.1 Summary of Historic Resources Survey

On behalf of the Applicant, EDR conducted an Historic Resources Survey for the ECWF. A total of 1,062 properties were surveyed as part of the survey:

- A total of 352 historic resources were previously identified in the Ohio Historic Inventory:
 - No change is recommended for three NRHP-listed resources (Heter Farm [79001941], Hunts Corners Historic District [93000896], and Omar Chapel [87001982]).
 - One NRHP-listed property, the Spacecraft Propulsion Research Facility (85002802) is located on the NASA Plum Creek Research Station, and was not publicly accessible, and was therefore not able to be evaluated.
 - One NRHP-listed property (Henny Barn [aka Clarence Drown Barn] [79003646]) was found to be no longer extant.
 - Four properties that were previously identified in the Ohio Historic Inventory as not having been formally evaluated for NRHP eligibility status by OHPO (J. P. Heymann House [HUR0007501], Zion Evan Reformed Church [HUR0007601], Clarence Drown House [SEN0054605], and Clarence Drown Barn [SEN0054505]) were found to be contributing resources to properties previously listed on the NRHP.
 - 60 properties appeared to satisfy eligibility criteria for listing on the NRHP.
 - 71 properties were found to be no longer extant (including one NRHP-listed property mentioned above).
 - 34 properties were not visible from the public right-of-way or could not be located in the field (including one NRHP-listed property mentioned above).
 - 180 properties did not appear to satisfy eligibility criteria for listing on the NRHP.
- A total of 710 historic properties were newly identified as the result of the survey:
 - 24 properties appeared to satisfy the eligibility criteria for listing on the NRHP, including two thematic groups.
 - 665 properties did not appear to satisfy the eligibility criteria for listing on the NRHP.
 - 21 properties were unable to be formally evaluated for NRHP eligibility due to the distance from the road, or intervening vegetation.

EDR is requesting that OHPO review the results of this historic resources survey and provide final determinations of NRHP eligibility.

As described in the Mannik & Smith *Historic/Architectural Survey Plan*, I-forms have been prepared for "properties (within the visual impact area) not previously recorded that retain their material integrity and represent a high degree of architectural interest, known associations within the historic contexts developed...or are best examples of vernacular or repetitive property types" (MSG, 2019: 14). I-forms for 31 newly identified properties have been prepared for review by OHPO in order to provide determinations of NRHP eligibility. This total includes 22 individual properties, two thematic groups, and seven representative properties (see Appendix G). Also consistent with the *Historic/Architectural Survey Plan*, newly identified properties in the APE for Indirect Effects where integrity is compromised, or where a "best" representative of a style/type is already identified are included in tables and photologs included as Appendices C-F.

5.2 Conclusion

Construction of the ECWF will not require the demolition or physical alteration of any buildings or other potential historic resources. No direct physical impacts to historic properties will occur as a result of construction of the ECWF.

The Federal Regulations entitled "Protection of Historic Resources" (36 CFR Part 800) include in Section 800.5(2) a discussion of potential adverse effects on historic resources. With respect to wind energy projects:

Adverse effects on historic properties include, but are not limited to: [items i-iii do not apply]; (iv) Change of the character of the property's use or of physical features within the property's setting that contribute to its historic significance; (v) Introduction of visual, atmospheric or audible elements that diminish the integrity of the property's significant historic features; [items vi-vii do not apply].

The potential effect of the ECWF on a given historic property within the APE for Indirect Effects is limited to a change in the property's visual or auditory setting resulting from the introduction of wind turbines. As it pertains to historic properties, setting is defined as "the physical environment of a historic property" and is one of seven aspects of a property's integrity, which refers to the "ability of a property to convey its significance" (NPS, 1990:44-45). The other aspects of integrity include location, design, materials, workmanship, feeling, and association (NPS, 1990). The potential effect resulting from the introduction of wind turbines into the visual setting for any historic or architecturally significant property is dependent on a number of factors including distance, visual dominance, orientation of views, viewer context and activity, and the types and density of modern features in the existing view (such as buildings, residences, overhead electrical transmission lines, cellular towers, billboards, highways, and silos).

Much of the APE for Indirect Effects is located in areas consisting of farmsteads, rural villages, and small clearings in forested areas. The small clearings found in forested areas are generally inaccessible to the public and may therefore not be adversely affected by the ECWF. The greatest potential for unscreened views of the ECWF will be in rural residential and agricultural areas. In more densely developed areas, most of the proposed turbines will be at least partially screened by trees and structures. Field review of the Historic Resources Study Area confirmed that the lack of elevated topographic features coupled with intervening vegetation (i.e. hedgerows and woodlots along the borders of agricultural fields) effectively screens long-distance views of the ECWF and limits visibility to foreground and middle ground views (i.e., generally under 5 miles).

Based on the percentage of the APE for Indirect Effects that overlaps with historic resources identified within this report, the lidar based viewshed, the lack of development, and the open, flat landscape within the Historic Resources Study Area, the proposed construction of the ECWF may result in a significant change to the visual setting of the NRHP-listed and NRHP-eligible historic properties located within the APE for Indirect Effects.

5.2.1 Mitigation

Mitigation options are limited, given the nature of the ECWF and its siting criteria (tall structures typically located in open fields). As described in the *Visual Impact Assessment* for the ECWF (VIA, 2019b) various mitigation measures were considered. These included the following:

- A. Screening. Views of the proposed turbines from cities and villages, where the majority of the residents and sensitive historic resources are located, are typically well screened by intervening structures and trees. Middle ground and background views in the more rural portions of the Historic Resources Study Area, including views from visually sensitive historic resources, are generally at least partially screened by hedgerows and woodlots. Due do the height of individual turbines and the geographic extent of the proposed ECWF, screening of individual turbines with earthen berms, fences, or planted vegetation will generally not be effective in reducing ECWF visibility or visual impact.
- B. Relocation. The proposed turbines will comply with various siting and set-back requirements that help to reduce their visual impact. However, because of the number of individual turbines proposed, and the variety of viewpoints from which they may be visible, additional turbine relocation will generally not significantly alter visual impact. Where visible from historic resources within the Historic Resources Study Area, relocation of individual machines would have little effect on overall visual impact. Throughout the study area, available

- views of the ECWF include different turbines at different distances from the viewer. Therefore, turbine relocation would generally not be effective in mitigating visual impacts.
- C. Camouflage. The white color of wind turbines as mandated by the FAA to eliminate the need for daytime lighting minimizes contrast with the sky under most conditions, especially when viewed at distance against the horizon. Consequently, use of this color is an appropriate means of limiting visual impact. The size and movement of the wind turbine blades prevents more extensive camouflage from being a viable mitigation alternative (i.e., they cannot be made to look like anything else).
- D. Low Profile. A significant reduction in turbine height is not possible without significantly decreasing power generation. To off-set this decrease, additional turbines would be necessary. There is not adequate land under lease to accommodate a significant number of additional turbines, and a higher number of shorter turbines would not necessarily decrease Project visual impact. The actual project that is built will include fewer turbines and/or somewhat smaller turbines.
- E. Lighting. Turbine lighting will adhere to FAA regulations. Medium intensity red strobes will be used at night rather than white strobes or steady burning red lights.
- F. Maintenance. The turbines and turbine sites will be maintained to ensure that they are operating efficiently.
- G. Offsets. Correction of an existing aesthetic problem within the viewshed is a viable mitigation strategy for wind power projects that result in significant adverse visual impact. Given the results of this study, removal of existing blighted/derelict structures to offset any potential adverse visual impact of the proposed Project does not appear to be warranted.

It is worth reiterating that although the Historic Resources Survey considered a Historic Resources Study Area and APE for Indirect Effects based on an 87-turbine layout, only 71 turbines will be ultimately constructed. Therefore, the viewshed depicted in the attached figures is an overstatement of anticipated visibility of the ECWF when constructed. However, as noted above, proposed construction of the ECWF may result in a significant change to the visual setting of the NRHP-listed and NRHP-eligible historic properties located within the APE for Indirect Effects. Therefore, EDR recommends that following review of the Historic Resources Survey results, consultation with OHPO should continue and focus on identifying viable and acceptable mitigation measures to offset any visual impacts on historic properties resulting from the ECWF.

For previous wind energy projects in Ohio, the OHPO has approved "offset" funding to support projects which enhance continued meaningfulness of the local community's historic properties and/or the public's appreciation of historic resources. The purpose of this mitigation funding is to offset potential visual impacts to historic properties resulting from the introduction of wind turbines and related components into their visual setting. For previous projects, mitigation measures have consisted of "offset" projects that provide funding to regional historic properties/sites, historic preservation programs, and/or programming/educational efforts that promote the public's appreciation of historic resources.

Staff Resumes

Susan E. Arena Project Architectural Historian

Susan is a Project Architectural Historian with EDR. She has over 10 years of experience working on historic preservation projects and meets the Qualifications for the Secretary of the Interior's Standards for Architecture and Historic Preservation (per 36 CFR 61). She has had extensive training and experience in the National Register of Historic Places (NRHP) nomination process, and regularly conducts background research and site visits to support EDR cultural resources and environmental projects. Her experience includes historic building rehabilitations, existing conditions assessments, preservation planning and ordinance administration, cultural resource surveys, and educational programming.

As an Architectural Historian with EDR, Susan is responsible for conducting historic-architectural resources surveys, NRHP eligibility determinations and nominations, and existing conditions reports. Her role also includes research, field work, and report preparation for cultural resources surveys in support of EDR's environmental permitting projects. Susan also has extensive experience and relationships consulting with the State Historic Preservation Office staff in New York, Massachusetts, and Connecticut, as well as many regional organizations.

education

Bachelor of Arts, Architectural Studies, Minor in Art History, Hobart & William Smith Colleges, Geneva, NY, 2003.

Master of Science, Historic Preservation, University of Vermont, Burlington, VT, 2008.

professional affiliations

Member, Society of Architectural Historians

Member, Historic New England

Member, Adirondack Architectural Heritage

Member, National Trust for Historic Preservation

Selection committee, 2018 Most Endangered Historic Resources List, Preservation Massachusetts

North Country SPCA, (Board of Directors 2010-2014, Secretary 2011-2014), Elizabethtown, NY.

employment history

Project Architectural Historian, Environmental Design & Research, Landscape Architecture, Engineering, & Environmental Services, D.P.C., Albany, NY, 2019-present.

Preservation Planner, City of Worcester, Worcester, MA, 2017-2019.

Architectural Historian, EBI Consulting, Various sites, New England, 2014-2017.

Program Director, Adirondack Architectural Heritage, Keeseville, NY, 2008-2014.

Intern, Camp Santanoni Historic Site, Newcomb, NY, 2007.

project experience

Flint Mine Solar, Towns of Athens and Coxsackie, Greene County, NY — Completed a Historic Resources Survey in support of a certificate of environmental compatibility and public need under Article 10 of the New York State Public Service Law for a proposed (up to) 100 MW solar energy facility.

Heritage Wind Project, Town of Barre, Orleans County, NY – Assisted with a Historic Resources Survey in support of the Article 10 Application for a proposed 200 MW wind energy project with up to 33 wind turbines.

NYSOPRHP Waterfront Historic Resources Survey, Orange County, NY — Using NYSOPRHP's Trimble TerraFlex® mobile survey application, provided SHPO with new and updated National Register eligibility recommendations for historic properties in the Town of Wallkill and the City of Middletown, NY.

Cultural Resources Surveys, New York State Department of Transportation, NY – Conducted cultural resources surveys for multiple New York State Department of Transportation (NYSDOT) Section 106 Review Project Submittal Packages (PSPs), completed to facilitate project review under the Federal Highway Administration's National Environmental Policy Act (NEPA) review process. Completed historical research, field surveys, and document preparation for multiple transportation projects, including roadway improvements, pedestrian trails, and bridge rehabilitations and replacements. Representative projects are listed below.

- West Colvin Street Bridge Repair (PIN 3756.57) Syracuse, NY
- Stoneleigh Avenue Repaving (PIN 8761.97) Carmel, NY

Susan E. Arena Project Architectural Historian

- Wilbur Avenue Repaving (PIN 8762.02) Kingston, NY
- Church Street Bridge Replacement (PIN 1760.55) Granville, NY

Project Consultations, New York State Office of Parks, Recreation, and Historic Preservation (NYSOPRHP), NY — Compiled and submitted information through the NYSOPRHP Cultural Resources Information System (CRIS) to initiate project consultation and review under Section 14.09 of the New York State Historic Preservation Act. Representative projects are listed below.

- Key Capture Energy NY8, Battery Energy Storage Facility Cairo, NY
- Key Capture Energy NY14, Battery Energy Storage Facility Poughkeepsie, NY

High Bridge Wind Project, Town of Barre, Orleans County, NY – Assisted with resource entry using NYSOPRHP CRIS associated with a Historic Resources Survey in that was prepared support of the Article 10 Application for the proposed 100.8 MW wind energy project with up to 25 wind turbines.

Northbrook Lodge, Paul Smiths, NY - Prior to EDR, Completed a baseline documentation report as part of a Preservation Easement, including descriptions of existing conditions, and history of the property. Tasks included historic research, site visits, photography, and report writing.

Town of Willsboro, NY - Prior to EDR, Completed a historic resources reconnaissance level survey report that included a history of the town and identified important historic resources and themes to assist the Town with future planning. Tasks included historic research, site visits, photography, and report writing.

Helen Hill Historic District, Saranac Lake, NY – Prior to EDR, Conducted research and authored the National Register of Historic Places (NRHP) nomination for a residential historic district. The Helen Hill District is a collection of 67 residences associated with the growth of the village due to the treatment of tuberculosis in the late-nineteenth century. Listed October 23, 2015.

Debar Pond Lodge, Duane, NY – Prior to EDR, Conducted research and authored the National Register of Historic Places (NRHP) nomination for this Arts and Crafts inspired Adirondack retreat built by local craftsman, Ben Muncil. Listed December 16, 2014.

Northbrook Lodge, Paul Smiths, NY - Prior to EDR, Conducted research and authored the National Register of Historic Places (NRHP) nomination for this c.1940 Great Camp inspired property designed by notable Saranac Lake architect, William Distin. Listed April 7, 2014.

Lyon Street School, Peru, NY – Prior to EDR, Conducted research and authored the National Register of Historic Places (NRHP) nomination for this mid-19th century one-room schoolhouse. It is a largely intact representation of one-room school architecture and the rural district method. Listed May 22, 2013.

Heyworth-Mason Industrial Building, Peru, NY — Prior to EDR, Conducted research and authored the National Register of Historic Places (NRHP) nomination for an 1836 stone mill. The property was home to A. Mason and Sons Lumber Company who operated there for over 90 years. Listed May 4, 2014

New England – Prior to EDR, Completed Section 106 consultation reports for telecommunications projects, including modifications of existing facilities and new collocations.

New England – Prior to EDR, Completed telecommunications reports as part of the NEPA compliance process, facilitating the environmental review process to ensure clients' compliance with FCC requirements under NEPA.

Fulton Block Builders, Fulton, NY - Prior to EDR, Created a historic paint guide to assist homeowners with color selection as part of a local community revitalization.

Andrew R. Roblee Project Architectural Historian

Andrew Roblee is a Project Architectural Historian at EDR. Mr. Roblee meets the Qualifications for the Secretary of the Interior's Standards for Architecture and Historic Preservation (per 36 CFR 61) and has had extensive training historic preservation planning and the evaluation of historic resources. Prior to joining EDR, Andy was the Facilities Manager at the Seward House Museum in Auburn, a National Historic Landmark. He holds a Bachelor of Arts degree in History from Wells College, and recently completed the graduate program in Historic Preservation Planning at Cornell University. He has previously served on the Auburn Enlarged School District Board of Education as well as on the Board of Directors for the Cayuga County Convention and Visitors Bureau, Auburn Housing Authority Development Corporation, and Chapel House Homeless Shelter. Andy currently serves on the City of Auburn Historic Resources Review Board.

As a Project Architectural Historian with EDR, Andy is responsible for supporting historic preservation projects; conducting historic resources surveys; National Register of Historic Places (NRHP) eligibility determinations and nominations; literature review/research conducted in support of cultural resources and environmental analyses; assisting in preparation of cultural resources surveys; and providing visual

impacts analyses relative to historic resources for state permitting documents.

education

Master of Arts, Historic Preservation Planning, Cornell University, 2017.

Bachelor of Arts, History with Distinction, Wells College, 2011.

professional affiliations

Treasurer, Board of Directors, Chapel House Homeless Shelter, 2012-2014.

Trustee, Board of Directors, Cayuga County Convention and Visitors Bureau, 2014-2015.

President, Board of Directors, Auburn Authority Development Corporation, 2012-2014.

President, Association for Preservation Technology, Cornell University Chapter, 2015-2016.

Board Member, Preservation Association of Central New York

Board Member, Historic Preservation Planning Alumni of Cornell University.

employment history

Project Architectural Historian, Environmental Design & Research, Landscape Architecture, Engineering & Environmental Services, D.P.C., Syracuse, NY, 2019-present.

Cultural Resources Specialist, Environmental Design & Research, Landscape Architecture, Engineering & Environmental Services, D.P.C., Syracuse, NY, 2017-2019.

Assistant Cultural Resources Specialist, Environmental Design & Research, Landscape Architecture, Engineering & Environmental Services, D.P.C., Syracuse, NY, 2016–2016.

Site Administrator, preservenet.comell.edu, Ithaca, NY, 2015-2017.

Columnist, The Citizen [newspaper], Auburn, NY, 2012-present.

Facilities Manager, Seward House Museum, Auburn, NY, 2011-2015.

elected posts

City of Auburn Historic Resource Review Board, 2016-present.

Auburn Enlarged City School District, Board of Education, 2013-2015.

project experience

Skipjack Wind Farm, Outer Continental Shelf, New Jersey, Maryland, and Delaware - Completed an historic resources visual effects analysis in support of National Environmental Policy Act (NEPA) and Section 106 of the National Historic Preservation Act by the Bureau of Ocean Energy Management (BOEM) review by for a proposed 120- MW offshore wind energy project.

Andrew R. Roblee Project Architectural Historian

South Fork Wind Farm, Outer Continental Shelf, New York, Rhode Island, and Massachusetts - Completed an historic resources visual effects analysis in support of National Environmental Policy Act (NEPA) and Section 106 of the National Historic Preservation Act by the Bureau of Ocean Energy Management (BOEM) review by for a proposed 90-MW offshore wind energy project.

Mohawk Solar, Montgomery County, NY- Completed a Historic Architectural Resources Survey and an historic resources effects analysis in support of a certificate of environmental compatibility and public need under Article 10 of the New York State Public Service Law for a proposed 90 MW solar energy facility.

Bluestone Wind Project, Towns of Windsor & Sanford, Broome County, NY- Completed a Historic Architectural Resources Survey and an historic resources visual effects analysis in support of the Preliminary Scoping Statement (PSS) and Article 10 Application for the proposed Bluestone Wind Project.

Apex Heritage Wind Project, Orleans County, NY – Prepared a Phase 1A Historic Resources Survey Work Plan in support of an Article 10 Application to the New York State Board on Electrical Generating Siting and the Environment for a proposed (up to) 200-MW wind farm.

Solar Development Project (Private Client), Frederick County, MD - Conducted historic-architectural resources survey fieldwork and evaluation of potential historic properties as part of cultural resources studies for a proposed 80-MW solar facility on 650 acres of land.

NYSOPRHP Waterfront Historic Resources Survey, Orange County, NY – Using NYSOPRHP's Trimble TerraFlex@ mobile survey application, provided SHPO with new and updated National Register eligibility recommendations for historic properties in the Town of Wallkill and the City of Middletown, NY.

New York State Regional Economic Development Council (REDC) Consolidated Funding Application (CFA) on behalf of the Cayuga Museum, Auburn, NY- Developed a successful and comprehensive application package with a project narrative, photos, site plans and maps in support of a project to mitigate water infiltration at a National Register-listed historic property. The application was successful, and the project was awarded a \$53,700 Environmental Protection Fund Grant from the New York Department of Parks, Recreation, and Historic Preservation.

New York State Office of Parks, Recreation & Historic Preservation (NYSOPRHP) Consultation, Various Counties, New York State- Prepared a number of submittals for NYSOPRHP/SHPO consultation through the Cultural Resource Information System (CRIS) website, including preparation of project narratives, maps, photographs and supporting historical documentation as needed for projects located in several counties in New York State.

Cultural Resources Surveys, New York State Department of Transportation, NY- Conducted cultural resources surveys for over 30 New York State Department of Transportation (NYSDOT) Section 106 Reviews in 14 counties, completed to facilitate project review under the Federal Highway Administration's National Environmental Policy Act (NEPA) review process. Completed historical research, field surveys, and document preparation for multiple transportation projects, including roadway improvements, pedestrian trails, and bridge rehabilitations and replacements.

Solar Development Project (Private Client), Worcester County, MD- Conducted historic-architectural resources survey fieldwork and evaluation of potential historic properties as part of cultural resources studies for a proposed 100 MW solar energy project located on 900-acres.

Baron Winds Project, Steuben County, NY- Assisted with research, report writing, and GIS analyses for a historic-architecture resources survey in support of an Article 10 Application to the New York State Board on Electrical Generating Siting and the Environment for a proposed (up to) 300 MW wind energy project with up to 80 wind turbines.

Cassadaga Wind Farm, Chautauqua County, NY- Assisted with research, report writing, and GIS analyses for a historic-architecture resources survey in support of an Article 10 Application to the New York State Board on Electrical Generating Siting and the Environment for a proposed 58 wind turbine, 126 MW wind energy facility.

Interstate 81 (I-81) Viaduct Project, City of Syracuse, Onondaga County, NY-Assisted with historical research, photography fieldwork, and report writing for a Phase 1A Archaeological Sensitivity Assessment as part of Section 106 of the National Historic Preservation Act consultation and National Environmental Protection Act (NEPA) review for New York State Department of Transportation (NYSDOT) PIN 3501.60, D031085 — the replacement of approximately 5 miles of elevated interstate highway through downtown Syracuse, NY.

Syracuse Creekwalk Phase II, City of Syracuse, Onondaga County, NY- Assisted with historic-architectural survey field work and photography for a Historic Resources Survey and assisted with historical research for a Phase 1 Archaeological Survey for the 2.2-mile extension of the Syracuse Creekwalk from Armory Square to Kirk Park along Onondaga Creek.

West River Greenway Trail, Town of Grand Island, Erie County, NY- Assisted with historical research and report writing for a Phase 1 Archaeological Survey of the proposed route of an 8-mite multi-use/pedestrian trail proposed to be built upon the re-purposed West River Parkway in Grand Island, NY.

South Fork Wind Farm, Town of East Hampton, NY- Assisted with research, report writing, and GIS analyses for a historic-architecture resources survey in support of an Article VII Application to the New York State Public Service Commission for the on-shore transmission and interconnection facilities associated with an offshore wind energy facility. Also assisted with historic resources visual effects analysis.

Tetra Tech Restore Louisiana, State of Louisiana- Assisted in making date determinations on flood-damaged properties in multiple parishes throughout southern Louisiana using historic maps, municipal GIS data, and written sources.

Andrew R. Roblee Project Architectural Historian

Seward House Museum, Auburn, Cayuga County, NY- Prior to EDR, Designed a \$60,000 annual capital budget for a 200-year-old historic home listed on the Nation Register of Historic Places, and as a National Historic Landmark. Also authored and implanted the first comprehensive Maintenance and Emergency Response Plans in the Museum's history. In addition, authored a Facilities Master Plan, which outlined the direction of the Seward House Museum facilities into the next decade, and was Designated as main docent for special guests and official visitors, including NYS Comptroller, US House Majority leader, among others.

Historic Structure Report (HSR), Case Research Laboratory, Auburn, NY- Prior to EDR, Completed Historic Structure Report for a Victorian greenhouse modified into a photoelectric laboratory in 1916, in which an early sound on film technology was developed by Theodore Case. Conducted extensive documentation and analysis of building systems and site, noting deterioration and making recommendations for rehabilitation.

Centreport Aqueduct Park Pond Inclusion Project, Brutus, NY- Prior to EDR, Participated in Cornell University's Design Connect team. Assisted in the development of a design and planning package for The Town of Brutus which provided GIS mapping, historic preservation, architectural design and environmental conservation services for the expansion of a park containing an historic aqueduct associated with the Erie Canal. This project subsequently won an Environmental Protection Fund grant from the New York Department of Parks, Recreation, and Historic Preservation to implement key aspects of the plan.

1.0 INTRODUCTION

The Mannik & Smith Group, Inc. (MSG) was contracted to prepare an historical/architectural survey plan for two proposed wind energy generating projects in north central Ohio. Given their close proximity, and the similarities of both projects in terms of historic/environmental setting, physical design, and potential impacts, a standard methodology for conducting Phase I investigations was developed by MSG, pursuant to state and federal compliance requirements. The projects are referred to as the Emerson Creek Wind Project (OPSB Case #18-1607-EL-BGN) and the Republic Wind Project (OPSB Case #17-2295-EL-BGN).

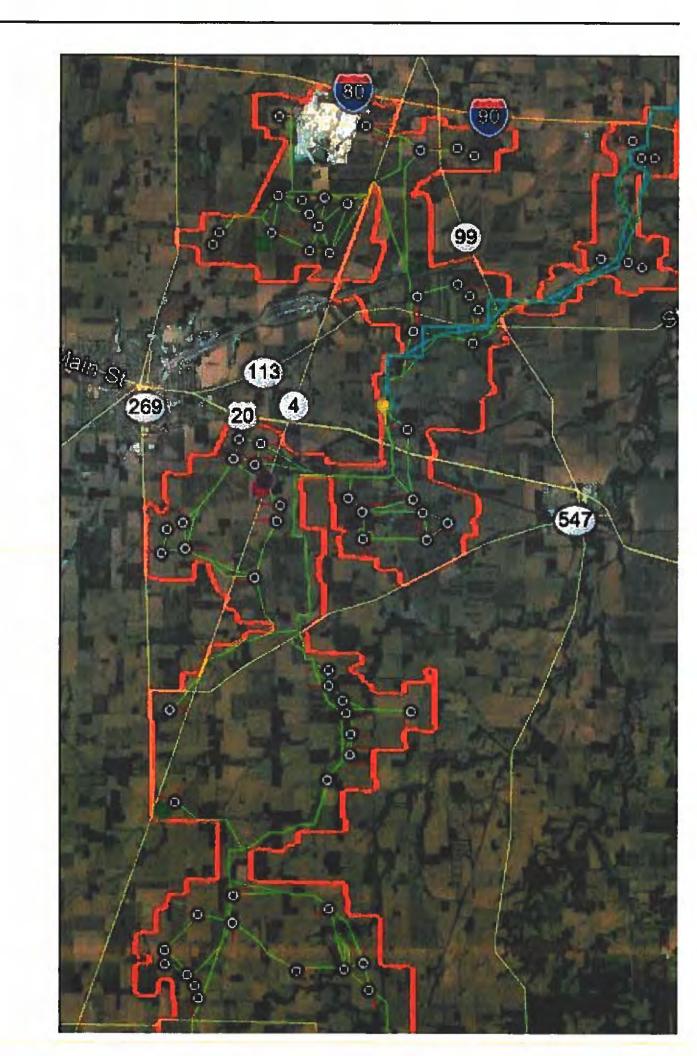

The siting and construction of these projects will be permitted by the Ohio Power Siting Board (OPSB) under Chapter 4906 of the Ohio Revised Code (ORC), which requires the OPSB to take cultural resources into consideration as part of the application filling requirements for wind-powered electric generation facilities. The Ohio State Historic Preservation Office (OSHPO) is the agency charged with coordinating cultural resource compliance activities under ORC 149.52-149.54.

As part of its effort to prepare an Application for a Certificate of Environmental Compatibility and Public Need for the Facility, the project applicant (Applicant) previously commissioned Environmental Design & Research (EDR) of Syracuse, New York to prepare a cultural resources records review meeting the requirements of Ohio Administrative Code Rule 4906-04-08(D). For both projects, a Cultural Resources Records Review and a Visual Impact Assessment (VIA) report, also prepared by EDR, were previously submitted for review by the OSHPO. Results of these studies served as the basis for the following recommended survey methods, which were developed by MSG to identify and evaluate historic/architectural properties that may be affected by the proposed projects.

2.0 PROJECT DESCRIPTIONS

Both of the current proposed projects fall within in the Central Lowland Physiographic Province of north central Ohio. The Emerson Creek Project is located in Erie and Huron counties, Ohio (Figure 2.1). As currently planned, this project will consist of up to 71 wind turbines each with a nameplate capacity rating of 4.2 to 4.5 megawatts (MW). A specific model of wind turbine has not yet been selected, but the largest model under consideration is the Nordex 149 with two different hub heights: 183.5 m (602 ft) and 199.5 m (655 ft). Other associated facilities include up to 36 miles of access roads, up to 120 circuit miles of buried 34.5 kV electrical collection cable, a collection substation, a laydown yard, an Operations & Maintenance building, two points of interconnection with other electrical generating facilities, a permanent meteorological tower, two power performance towers, and an approximately 10.2-mile Gentie line. The total Emerson Creek Project Area encompasses 32,000 ac (50 square miles) in Erie County (Groton and Oxford townships) and Huron County (Lyme, Norwich, Richmond, Ridgefield, and Sherman townships) (Figure 2.2).

The proposed Republic Wind Project is located in Sandusky and Seneca counties, Ohio (Figure 2.3). The Republic Project will consist of up to 50 wind turbines each with a nameplate capacity rating of 4.2 to 4.5 megawatts (MW). Of the turbine models under consideration for this project, the Acciona/Nordex 149 has the greatest maximum turbine height at 602 feet (183.5 meters). Associated facilities include up to 20 miles of temporary and permanent access roads, up to 83 circuit miles of buried 34.5 kV electrical collection cable, two 90-m (295 ft) meteorological towers, a collection substation, an operations and maintenance (O&M) building, a temporary laydown yard, a switchyard, and an approximately 11.6-km (7.2-mile) long Gentie line. The total Republic Project Area encompasses 24,000 ac (approximately 37.5 square miles) in Sandusky County (York Township) and Seneca County (Adams, Pleasant, Reed, Scipio, and Thompson townships) (Figure 2.4).

Republic Wind Project
Seneca and Sandusky Counties, Ohio

3.0 VISUAL IMPACT ASSESSMENTS

Under OAC rules, and as part of the application for permitting, information on cultural and archaeological resources is required by the OPSB, and an evaluation of the visual effects that may result from the project. Within a 10-mile radius, a Visual Impact Assessment (VIA) describes the visibility of the project and the area of visual effects, identifies cultural resources within that area, and evaluates the impact of the project on those resources and their associated historic/cultural setting. A VIA report was prepared by EDR for both proposed wind energy generating projects, as part of the Certificate Application for the Project, in accordance with OAC Chapter 4906-04-08(D)(4). Both reports include an evaluation of the potential visibility of the project based on viewshed analysis, field verification, and visual simulations. They were prepared using standard visual impact methodology for wind energy projects developed by the U.S. Department of the Interior, Bureau of Land Management (1980), U.S. Department of Agriculture, National Forest Service (1974), U.S. Department of Transportation, Federal Highway Administration (1981), and other state and federal agencies.

The Republic Wind Project VIA was originally prepared in January 2018 and submitted to the OPSB in February 2018, but was later revised and resubmitted in December 2018 as part of the Certificate Application for the Project. The Republic study area encompasses approximately 728 square miles and includes portions of Erie, Huron, Sandusky, and Seneca Counties. Municipalities within the study area include 3 cities, 2 villages and 16 townships. The location and extent of the Republic visual study area is illustrated in Figure 4 of the VIA report (p. 11). The Emerson Creek VIA was prepared in March 2018 and submitted in March 2019 as a supplemental filing to the January 2019 Certificate Application. The Emerson Creek study area encompasses approximately 946 square miles and includes portions of Crawford, Erie, Huron, Richland, Sandusky, and Seneca Counties. Municipalities within the study area include 6 cities, 13 villages and 42 townships. The location and extent of the Emerson Creek visual study area is illustrated in Figure 3 of the VIA report (p. 85). Within those study areas, EDR used several factors to evaluate the impact of the proposed project on the "preservation and continued meaningfulness" of historic properties, in accordance with OPSB rules.

3.1 Distance Zones

Within the 10-mile visual study area, EDR identified three distinct distance zones, with associated attributes. The following description is taken directly from the Emerson Creek VIA (pp. 8-9).

Foreground: 0 to approximately 0.5 mile. At these distances, a viewer is able to perceive details of an
object with clarity. Surface textures, small features, and the full intensity and value of color can be
seen in foreground objects.

- Middle ground: approximately 0.5 to 4.0 miles. The middle ground is usually the predominant distance
 at which landscapes are seen. At these distances a viewer can perceive individual structures and
 trees but not in great detail. This is the zone where the parts of the landscape start to join together.
 Colors will be clearly distinguishable but will have a bluish cast and a softer tone than those in the
 foreground. Contrast in color and texture among landscape elements will be reduced.
- Background: over 4.0 miles. The background defines the broader regional landscape within which a view occurs. Within this distance zone, the landscape has been simplified; only broad landforms are discernable, and atmospheric conditions often render the landscape an overall bluish color. Texture has generally disappeared, and color has flattened, but large patterns of vegetation are discernable. Silhouettes of one land mass set against another and against the skyline or horizon are the dominant visual characteristics in the background. The background contributes to scenic qualify by providing a softened backdrop for foreground and middle ground features, an attractive vista, or a distant focal point.

EDR concluded that the visibility and visual impact of the proposed turbines tend to be minimized with distance, depending on the visual characteristics of the landscape and the presence of structural or natural screening, as described below.

3.2 Landscape Similarity Zones

In addition to proximity to turbines, landscape character types are also factors that affect visual sensitivity. The landscape types identified in the visual study area – referred to in the VIA as Landscape Similarity Zones (LSZ) – are defined based on the similarity of landscape features, as well as characteristics that affect visual sensitivity. The four LSZs identified in the study area include: rural residential/agricultural; city/village; suburban residential; and transportation corridor. Photo simulations were generated as part of the VIA to provide representative views of the turbines from various distances and directions in the study area, illustrating the range of visual impacts that might result within typical LSZ settings. The simulations were used to evaluate project visibility, appearance, and contrast with the existing landscape.

In terms of landscape types, views from the defined LSZs to the projects vary in quality and availability. The rural residential/agricultural zone was identified as the dominant landscape type within the study areas, and has the greatest potential for unscreened views of the projects. In more densely developed areas, most of the proposed turbines will be at least partially screened by trees and structures. In city/village zones, open, long distance views are generally not available, and adverse visual effects are not significant. In suburban settings, the impacts vary widely, depending on the distance from turbines. More specific conclusions about

the visual impacts within the LSZs is presented in Section 6.0 of the Emerson Creek VIA and Section 6.0 of the Republic VIA.

3.3 Visually Sensitive Resources

A literature review was conducted by EDR within the 10-mile visual study area of both projects to identify visually sensitive resources, under Rule 4906-04-08(D)(1) of the OAC. Using the OHPO's online mapping system, EDR identified 157 NRHP-listed sites (including 15 historic districts) and 36 NRHP-eligible sites within the Emerson Creek Wind Project study area. Of the NRHP-listed properties, the setting and views are noted as significant aspects of integrity for Hunts Corners (93000896), Heter Farm (79001941), and John Wright Mansion (74001530). Results of the literature review are presented in Appendix B of the Emerson Creek VIA.

For the Republic Wind Project, a literature review by EDR identified 51 NRHP-listed sites (one of which, Spiegel Grove, is also a National Historic Landmark), 5 NRHP-listed historic districts (including 4 residential and 1 commercial district), and 23 NRHP-eligible properties in a 10-mile study area. Based on their analysis, EDR concluded that NRHP-listed sites and districts most likely to experience views of the project fall within a 5- mile radius of the project. Of the 10 NRHP properties that fall within a 5-mile buffer, only the Pleasant Ridge United Methodist Church and Cemetery (93000880) and the Junior Order of the United American National Orphans' Home (90001499) specifically reference the setting or surrounding views as significant aspects of integrity. The significance of the 8 remaining NRHP sites is not associated with their respective setting/viewsheds, and EDR therefore concluded that visual analysis was not warranted for those properties.

3.4 Viewshed Analysis

The purpose of the VIA is to evaluate the visibility of the facilities proposed within the study area and assess the visual impacts associated with each of the respective projects. The analysis included identifying potentially visible areas on viewshed maps and verifying visibility in the field. The viewshed analyses were based on the Ohio Statewide Imagery Program's 2007 Light Detection and Ranging (LiDAR) data for Erie, Huron, Sandusky, and Seneca Counties. From that data, topographic viewshed maps were generated that defined the maximum distance from which any turbine could potentially be seen within the study area.

Two levels of mapping were created for the analysis. Mapping based solely on topography assumed a direct, unobstructed line of sight to the turbines from various points throughout the study area. The topographic map defined the maximum area from which any turbine could potentially be seen within the

study area, and represents the "worst case" assessment of potential project visibility. A more accurate analysis of potential project visibility was achieved through a second-level viewshed analysis that incorporated the screening effects of (non-seasonal) vegetation and structures, as captured in the 2007 lidar data, in addition to topography.

Both methods of analysis concluded that the greatest potential for unscreened views of the projects will be in the open agricultural areas. However, field review indicates that in more densely residential areas, a significant number of the turbines will be at least partially screened by trees and structures. Results of the second-level viewshed analysis that show the actual extent of project visibility were used as the basis for developing the recommended Phase I survey methodology described in Section 4.2 below.

3.5 Visual Simulations

The VIA also examined the visual impact of the proposed wind turbine using computer models of the proposed project turbines, selecting representative viewpoints within the study area, and preparing computer-assisted visual simulations. The photo simulations were compared with photos of existing views to characterize the type and extent of visual impacts resulting from the project construction. These comparisons indicate that the visibility and visual impact of the wind turbines will be highly variable, depending on the landscape setting, the presence of natural/manmade screening, and the distance of the viewer from the turbines.

4.0 PHASE I HISTORY / ARCHITECTURE SURVEY

The purpose of a Phase I historic/architectural survey is to determine if historic resources – that is, properties that are listed in or eligible for the National Register of Historic Places (NRHP) – will be adversely affected by the proposed projects. Under 36 CFR 800.5, an adverse effect is found when an undertaking may alter, directly or indirectly, the qualifying characteristics of an historic property. Direct effects include any physical impacts that may result from the projects, such as disturbance, destruction, or demolition. Indirect effects include changes in the character of a property's use or setting, or the introduction of incompatible visual, atmospheric, or audible elements.

For both projects, potential impacts to known cultural resources were among the factors considered by the Applicant for initial site selection. No demolition or physical alteration of existing aboveground (architectural) resources will occur, either during construction or from operation of the completed facilities. Therefore, no direct physical impacts to historic/architectural resources will occur as a result of the undertaking. However, the construction of the proposed wind turbines and associated infrastructure will likely introduce changes to the visual setting that may diminish the integrity of historic resources, if present.

4.1 Area of Potential Effects

Under 36 CFR 800.16, the area of potential effects (APE) for indirect effects includes those areas where the projects will be visible, as well as those areas where there is a potential for significant effects on the visual setting of historic properties. Based on the results of the VIAs, the lack of elevated topographic features coupled with intervening vegetation effectively screens long-distance views of the projects and limits visibility to foreground and middle ground views, generally under 5 miles. Based on this analysis, MSG recommends a 5-mile APE for each of the two proposed projects, as shown on Figures 4.1 and 4.2.

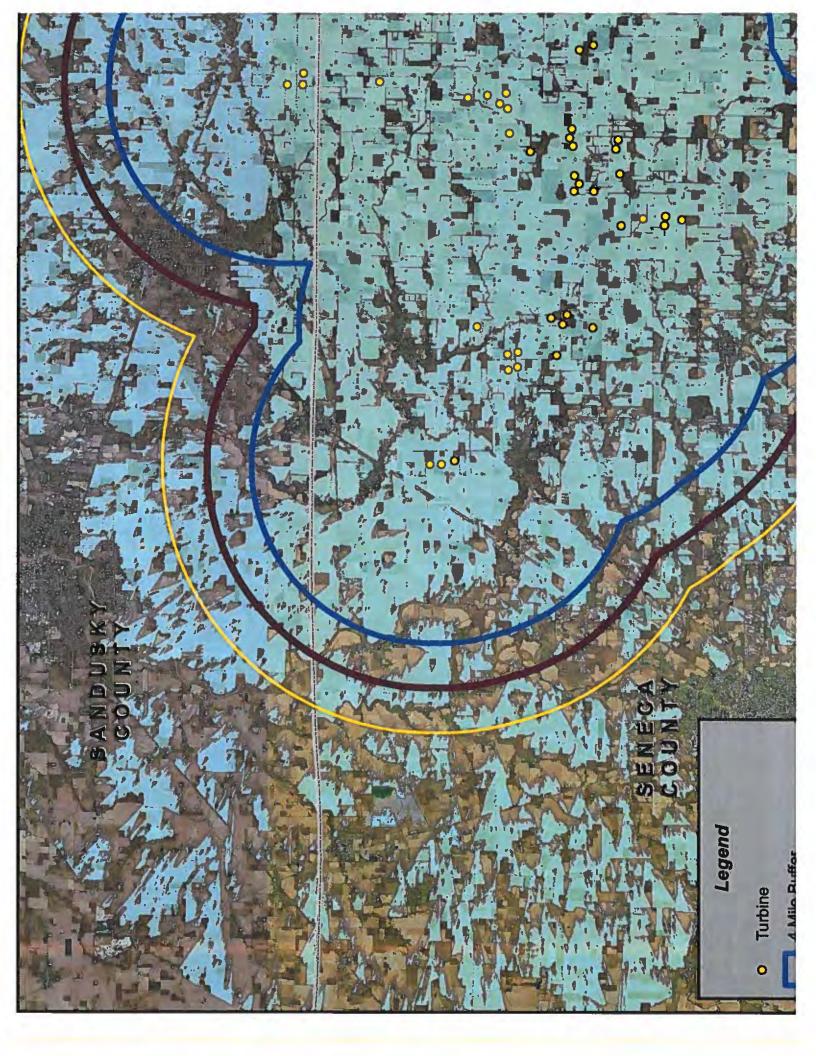

4.2 Survey and Documentation Methods

The data that was compiled by EDR for the VIA's second-level viewshed analysis has been adapted by MSG and used to develop the following recommended survey methods for identifying and recording historic/architectural resources over 50 years of age that are listed in or eligible for the NRHP and may be affected by the current proposed projects.

4.2.1 Literature Review

Prior to field investigations, MSG will update the literature review using the OSHPO's Online Mapping System. To ensure that adjacent properties are captured for consideration of district potential (outside the 5-mile APE), the literature review will encompass a 6-mile study area, as shown on Figures 4.1 and 4.2.

4.2.2 Historic Context

With the results of the literature review, supplemented by standard historical sources, we will develop comprehensive historic contexts and identify property types associated with those contexts. For each property type, we will define the minimum integrity threshold required for those property types to communicate their historic association; the integrity of each resource will determine the survey effort and level of documentation for reporting.

4.2.3 Fieldwork

Through field investigations, we will photograph and record all buildings over 50 years of age that are located within the 5-mile APE and may be visually affected by the projects as outlined below.

4.2.3.1 Outside the Visual Impact Area

In Figures 4.1 and 4.2, the areas that are *not highlighted in blue* fall outside the visual impact area. Regardless of their proximity to turbines, these areas are screened from view and will not experience a visual effect from the projects, either in terms of their visibility or their visual setting. Categorically, all properties that fall outside the blue overlay will not be recorded.

4.2.3.2 Within the Visual Impact Area

Properties (within the visual impact area) not previously recorded that retain their material integrity and represent a high degree of architectural interest, known associations within the historic contexts developed under Section 4.2.2, or are best examples of vernacular or repetitive property types will be recorded on individual electronic inventory forms (I-Forms).

For properties (within the visual impact area) not previously recorded, where integrity is compromised, or where a "best" representative of a style/type is already identified, data will be collected and compiled in spreadsheet form (a documentation table).

All previously recorded Ohio Historic Inventory (OHI) sites that fall within the 5-mile APE and the visual impact area will be field-checked, photographed, and recorded on a documentation table.

4.2.3.3 Within the 4-5 Mile Buffer

For both projects, the VIAs concluded that the lack of elevated topographic features coupled with intervening vegetation effectively screens long-distance views of the project and limits visibility of the project to foreground and middle ground views (up to 4 miles). As described in Section 3.1,

visual impacts are greater when objects are seen at close range; with greater distance, the scale of the infrastructure is less dominant and the turbines become more a part of the visual scenery. Turbines viewed from greater distances will not present the same level of visual disruption as from closer proximity. Therefore, properties within the APE that are over 50 years old and that fall outside the 4-mile buffer on Figures 4.1 and 4.2 (beyond the middle ground view) will be field-checked, photographed, and recorded on a documentation table rather than on an I Form.

5.0 REPORTING

MSG will produce separate reports for Republic Wind and Emerson Creek Wind describing the results of our investigations. Comprehensive historic contexts will be developed and the property types associated with those contexts will be identified. For each property type, we will define the minimum integrity threshold required for those property types to communicate their historic association and resources identified in the field will be evaluated within those contexts. We will evaluate the significance of each surveyed property (or potential district) in terms of the National Register criteria and offer recommendations for eligibility. We will also assess the potential impact of the projects on NRHP-eligible properties.

The report will include an introduction, discussion of project objectives and methodology, description overview, NRHP recommendations, assessment of effects, and bibliography. Exhibits attached to the report will include printed copies of I-forms, documentation tables, site location maps, and a captioned photo log that is keyed to a map that shows camera angles and locations. All work will conform to OSHPO reporting standards and will be performed in accordance with the Secretary of Interior's Standards and Guidelines for Archaeology and Historic Preservation. All analysis and reporting will be performed by an architectural historian meeting federal professional qualifications (36 CFR 61).

Appendix C.

Historic Resources Survey Results Table – Previously Identified Historic Resources

Appendix C. Historic Resources Survey Results - Previously Identified Resources

Name and/or Description
Eugene & Louise Brogle House, a one-story vernacular residence.
Brogle House (appears 4711 Columbus Avenue demolished)
No name given (appears 5205 Milan Road demolished)
Warehouse (resource located within restricted NASA Plum Creek Station boundary)
Warehouse (resource located within restricted NASA Plum Creek Station boundary)
Plant Protection Facility Pentolite Road at Columbus Avenue
Plant Protection Boiler House Pentolite Road
Knaur Cemetery (not visible from road, star indicates the OHPO- georeferenced point)
Didion Property (appears 7208 State Route 250 demolished)
Carpenter Shop (resource North side Maintenance located within restricted NASA Plum Creek Station boundary)

Arena, Susan	Andrew, Roblee; Johnson, Grant; Heaton, Patrick	2020	Historic Resources Survey, Emerson Creek Wind Farm

42. Further Description of Important Interior and Exterior Features

This is a two-story, wood-frame, Foursquare type house. It has a one-story, full-width, open porch on the front façade. The porch is constructed of unpainted, pressure-treated lumber. Other replacement materials include vinyl siding and windows.

43. History and Significance

This is a repetitive property type that is representative of housing common to the Historic Resources Study Area for the Emerson Creek Wind Farm Historic Resources Report. This is a vernacular example that has been modified through the use of modern materials resulting in loss of character defining architectural elements.

This house likely dates to the early twentieth century and may have originally exhibited Craftsman detailing. During the 1920s large nineteenth century farms were divided into smaller parcels and there was an increase in the construction of single-family homes on smaller parcels that did not include agricultural land.

44. Description of Environment and Outbuildings (See #52)

The house, accompanied by a modern metal garage and two smaller outbuildings, is sited on an open grassy lot with agricultural fields on all sides. The surronding area is rural, consisting of widely spaced residences and farms.

42. Further Description of Important Interior and Exterior Features

This is a one-and-one-half-story, side-gable house constructed of locally quarried limestone. It is five-bays wide with a center entry, metal roof, and placement six-over-six-windows. A one-story, vinyl clad wing extends to the south.

43. History and Significance

At just under six acres, the property is significantly smaller than it was historically. It appears on the 1874 Combination Atlas Map of Erie County, I lewart and Page as consisting of 268 acres, and on the 1896 Illustrated Atlas and Directory of Erie County, Ohio by the Atlas Publishing Co. as 28 yes (Stewart, 1874; Atlas Publishing Company, 1896). This house is a good example of the use of limestone construction common to Erie County ar retains a moderately high degree of integrity of location, materials, workmanship, and design. Coniferous limestone is noted as the most importate sological feature in Erie County. The upper portion of the limestone, which is formed in layers, is blue in color and known as "Sandusky stone" we appularly used for building and paving. The lower layer is lighter in color, composed largely of fossils and decomposing organic matter. Quarries are nekilns were prevalent in the city of Sandusky and the islands in Lake Erie during the nineteenth century. Many facilities are still in operation an nestone and crushed stone quarried in Erie County continue to be used for construction of buildings and roadways (Peeke, 1916; Sandusky Histor 1915).

44. Description of Environment and Outbuildings (See #52)

The entirety of the property is paritally obscured by evergreens making it difficult to descern details. A large, modern, pole-barn and four wood-frame sheds are located west of the house. The barn is sided in metal and appears to date to circa 2000. The four sheds are sided in wood, with asphalt roofs, and are site on poured concrete foundations. There is also a small limestone outbuilding directly behind the house. The smaller buildings are arranged in a linear fashion along the souther property line.

#### 42. Further Description of Important Interior and Exterior Features

This is a two-story, front-gable, brick house with a two-story, side-gable wing projecting to the west. The principal block is three-bays wide with a entry, asphalt roof, and wood six-over-six windows framed by wood shutters. The wing is wood framed, sided in clapboard and has a farm porchanning the width.

#### 43. History and Significance

The massing and partial cornice return indicate Greek Revival influences, which is consistent with the construction date of 1820 provided on the property record and construction materials (Erie County, 2020). The house, and a barn that is no longer extant, are included on the 1874 Combination Atlas Map of Erie County, by Stewart and Page, shown within a 112-acre parcel that closely reflects the modern boundaries (Stewart, 1874). The property is notable as a vernacular example of the Greek Revival style. The house is in fair condition, but retains a high degree of integrity of materials, location, setting, and design. Retaining the majority of its original acreage and agricultural setting, the property is also a good example of a nineteenth-century rural farmstead grouping consisting of a house and outbuildings associated with the agricultural development of northern Ohio.

#### 44. Description of Environment and Outbuildings (See #52)

A wood-frame, gable-roofed barn is located south of the house. A second barn, located across the road and within a stand of trees, is in very poor condition and near collapse.

#### 42. Further Description of Important Interior and Exterior Features

This is a two-story, side-gable, brick house with a full-height portico spanning the façade. The house is three-bays wide with a center entry topped by a transom light. The entry is flanked by double-hung windows each with a similar window aligned above; there is no window in the center on the second floor. All windows appear to be vinyl and have painted stone lintels.

#### 43. History and Significance

The property record provides a date of construction of 1875 (Erie County, 2020) which is plausible based on historic mapping and architectur fluences. The house is on a separate parcel from the outbuildings and land, but they are under the same ownership. The two parcels total 192 acre ompared to historic mapping this appears to be the result of two adjacent parcels, each consisting of approximately 150 acres, being combined the enorthern section was lost to a right-of-way for the railroad (Stewart and Page, 1874; Atlas Publishing Company, 1896). From at least 1860-1880 the operty was owned by Philip Bath, a farmer and English immigrant (USCB, 1860; 1870; 1880). The property is notable as an example of id-nineteenth century farmstead that retains a high degree of integrity of location, setting, design, and feeling. In addition, though vernaculaterpretations of Greek Revival were common during this period in northern Ohio, the full-height portico sets this house apart. As a rural farmstead outping consisting of a house, outbuildings, and acreage, it is also important for its association with the agricultural development of northern Ohio.

#### 44. Description of Environment and Outbuildings (See #52)

Sited behind the house are four barns. Visibility from the road is limited but it appears that the easternmost barn is a modern pole barn with metal siding, while the remaining four are wood frame and likely dating to the early nineteenth century. The farmstead is set back from the road on a gentle rise that is surrounded by agricultural fields.

#### 42. Further Description of Important Interior and Exterior Features

The property at 4420 Campbell Street, Sandusky is a one-and-one-half story bungalow type house with a front gable that covers a full-width porch. A broad gable roofed dormer is centered on the front roof plane. The porch is supported by brick columns and it has an iron railing. Knee brackets underscore the eave.

#### 43. History and Significance

This is a repetitive property type that is representative of housing common to the Historic Resources Study Area for the Emerson Creek Wind Farm istoric Resources Report. This is a vernacular example that has been modified through the use of modern materials resulting in loss of character afining architectural elements. Bungalows and one-story Craftsman inspired homes are common to the current building stock, one of the results of the reviously described pattern of subdivision of larger agricultural properties that occurred in the early twentieth.

#### 44. Description of Environment and Outbuildings (See #52)

The house is set on an open grassy lot with no outbuildings. The parcel is surrounded by agricultural fields and is located just southwest of the City of Sandusky in a transistional area between suburban and rural development.

#### 42. Further Description of Important Interior and Exterior Features

This is a two-story, wood-frame, Foursquare derivative house with a hipped roof. Approximately one-half of the façade is composed of a projecting two-story bay with a gable-roofed dormer above. A hipped-roofed dormer is centered on each side roof plane. A one-story, screened porch spans nearly the full width of the façade; it is supported by flared wood columns on cast-stone piers. Windows appear to be wood, one-over-one, siding is clapboard, the roof is asphalt, and the foundation is concrete block.

#### 43 History and Significance

The property record provides a date of construction of 1916, which is consistent with architectural influences. However, a house is present at this location on the 1896 *Illustrated Atlas and Directory of Erie County*, which, combined with the use of cast-stone for the foundation indicates a mid-1890s construction date (Atlas Publishing Company, 1896; Erie County, 2020). The house is a very good example of a Foursquare type house with Colonial Revival influences retaining a high degree of integrity of location, setting, design, and materials. It is also notable as an example of a nineteenth-century rural farmstead grouping consisting of a house and outbuildings and for its association with the agricultural development of northern Ohio.

#### 44. Description of Environment and Outbuildings (See #52)

Also on the property, which consists of 116 acres, are two barns, a shed, and a metal grain silo located north of the house. One of the barns appears to be wood frame with a gambrel roof and the other is a metal sided pole barn. The farmstead is sited on lvel ground surrounded by lawn and scattered mature trees. The surrounding land consists of agricultural fields.

Arena, Susan	Andrew, Roblee; Johnson, Grant; Heaton, Patrick	2020	Historic Resources Survey, Emerson Creek Wind Farm

#### 42. Further Description of Important Interior and Exterior Features

This is a two-story, front-gable, brick house with a one-and one-half-story, side-gable wing extending to the west. The design incorporates Greek Revival and Gothic Revival influences. The principal block is three bays wide with the entry in the right-hand bay; the door is framed by side lights and a transom light. The wing is three bays wide and the two bays nearest the principal block contain a recessed, open porch. Differentiating this example from other front-gable block and wing houses is a gable wall-dormer centered above the porch, accounting for the Gothic Revival-style influence. The roof is asphalt and is underscored by single brackets lining the eaves. Windows appear to be vinyl, six-over-six, with stone lintels and sills.

#### 43. History and Significance

This is a repetitive property type that is representative of housing common to the Historic Resources Study Area for the Emerson Creek Wind Farm Historic Resources Report. The property record provides a date of construction of 1860, which is consistent with architectural influences and historical mapping. A house is present in this location on the 1873 *Atlas of Huron County, Ohio* (Lake, 1873; Huron County, 2020). This massing is less common than the simple block and wing examples, but still prevalent.

#### 44. Description of Environment and Outbuildings (See #52)

Also on the property are two early twentieth century, concrete block garages. The buildings are sited within a stand of mature trees, with agricultural fields beyond. The surrounding area is rural, consisting of widely spaced residences and farms.

#### 42. Further Description of Important Interior and Exterior Features

Construction for this type of housing is generally one-story, CMU block with shallow gable roofs and lack architectural detailing or ornamentation. That is the case in the example at 0 State Route 103.

#### 43. History and Significance

The Historic Resources Survey for Emerson Creek Wind Farm identified three clusters of farm worker housing that thematically connect a camples of mid-twentieth century temporary housing associated with muck farms. The housing at all three sites dates to before 1959 based on view of aerial photography. They are important for their associations with the agricultural history in the area of Celeryville. Muck farming has been ading industry since the late nineteenth century. The building clusters are distinct in the area and easily recognizable for their design and proximity citive muck fields. They are occupied during the summer predominantly by migrant workers who harvest the crops.

arry Johnson recognized the potential for muck farming in the area. The expansive marshes were drained and left behind rich soil ideal for growing ariety of vegetable crops, including leafy greens such as lettuce, cabbage, and celery. Johnson recruited Dutch farmers from nearby Michigan locate to the area, with the first settlers arriving around 1896. Celery was established as the primary crop, leading to name, Celeryville (Opsome 199).

enry Wiers was one of the first Dutch farmers to arrive in Willard from Michigan, settling in 1896 and purchasing five acres to grow celery. In 1975 the agan operating under the name Dutch Maid Produce, which later became Dutch Maid Logistics. Today the company is operated by the fifth generation

ontinental US using their own fleet of trucks and refrigerated trailers (Wiers Farm, 2016).

his property, on Route 103, consists of half a dozen houses laid out in a line parallel to the road. There is a mix of single-families and duplexes. This ne of two properties that were identified as being associated with the Weirs family; the other is located at 0 Baseline Road, about 1.5 miles southwe is this. A third example of farm worker housing located near muck fields is at 0 Bevier Road. This collection is comprised of at least 19 building ustered at a dead-end road. The property is identified in county records as being owned by John F. Stambaugh & Co (Huron, 2020).

#### 44. Description of Environment and Outbuildings (See #52)

This group of housing is arranged in a linear fashion, set just off the road and fronted by lawn and mature trees. They abut muck fields and the surrounding area is rural.

#### 42. Further Description of Important Interior and Exterior Features

This is a two-story, three-bay, brick house with a hipped roof and a full-width, one-story porch on the façade. It appears to have two side-by-side front doors, one of which is blocked by shutters. Another door is centered on the second floor over the porch. Windows appear to be vinyl six-over-six, double-hung units and feature stone sills and lintels. A wide fascia board with racetrack motifs separated by single brackets encircles the building. The porch is supported by cast stone columns and piers, with cast stone block railing. Modillions underscore the porch roof eave. A modern, one-story addition with an open porch project from the center of the east elevation.

#### 43. History and Significance

Property records indicate the house was built in 1875, which is consistent with architectural influences, though the porch is an early twentieth centu Idition (Huron County, 2020). A building first appears at this location on the 1873 Atlas of Huron County as part of a 101-acre farm belonging to oder (Lake, 1873). Directly south of the house are a one-car garage and a wood-frame, L-shaped, gable-roof barn. The property is an excelle cample of a house type very common to north-central Ohio, a hipped-roof house on a square footprint, with a full-width porch. This example, execute brick with Italianate-style influences, retains a high degree of integrity of location, design, materials, and workmanship. The use of cast stone for porce plumns and railings is a common turn-of-the-century feature on rural homes in north central Ohio.

#### 44. Description of Environment and Outbuildings (See #52)

Directly south of the house are a one-car garage and a wood-frame, L-shaped, gable-roof barn. The buildings sit on level ground surrounded by lawn and scattered mature trees. There is a small pond toward the east side of the parcel. The surrounding land is primarily agricultural fields and widely spaced houses.

#### 42. Further Description of Important Interior and Exterior Features

This is a two-story, front-gable, brick house with a two-story, side-gable wing extending to the east. The principal block is three bays wide with the main entry positioned in the right-hand bay; the wing is four bays wide. The roof is asphalt shingles, and windows appear to be a combination of wood, six-over-six and vinyl one-over-one with stone lintels. A hexagonal window is located under the gable on the façade. The entry features sidelights and a transom and is protected by a flat-roofed portico supported by smooth Doric columns and pilasters.

#### 43. History and Significance

Based on historic maps, settlement trends, and architectural influences the house was likely constructed mid-nineteenth century. Historically the property extended north of State Route 113, encompassing approximately 41 acres, whereas it is presently 5.5 acres (Mesnard, 1891; Huron County, 2020). The property is notable as an example of a mid-nineteenth century vernacular Greek Revival residence that retains a high degree of integrity of location, design, workmanship, and materials.

#### 44. Description of Environment and Outbuildings (See #52)

Three pole barns all constructed between 1987 and 1998 are located southwest of the house. The property is located east of Bellevue along a stretch of road that consists of residences dating from the late nineteenth century to the present. Development is clustered along the roadway with expansive agricultural fields bordering on the rear of the parcels.

#### 42. Further Description of Important Interior and Exterior Features

This is a two-story, front-gable, brick house on a raised, limestone foundation (Inset 10). The house is three-bays wide and the entry is set in the right-hand bay flanked by smooth, Doric columns within a recessed doorway. Windows appear to be wood, six-over-six with stone lintels and sills framed by wooden shutters. A wood-frame addition extending to the east is composed of a one-and-one-half-story, front-gable front section nearest the principal block, and a one-story, side-gable section attached to that. The wing is sided in asbestos shingles.

#### 43. History and Significance

The property record provides a date of construction of 1846, which is consistent with architectural influences and historic maps (Huron County, 2020). A house appears to be present at this location as early at 1859 (Nunan, 1859). The property is notable as an example of a mid-nineteenth century vernacular Greek Revival-style residence that retains a high degree of integrity of location, design, workmanship, and materials.

#### 44 Description of Environment and Outbuildings (See #52)

Two early twentieth century wood-frame garages, and a modern, metal sided pole barn are located south of the house. The property is located east of Bellevue along a stretch of road that consists of residences dating from the late nineteenth century to the present. Development is clustered along the roadway with expansive agricultural fields bordering on the rear of the parcels

#### 42. Further Description of Important Interior and Exterior Features

This is a two-story, hip roofed, brick, Foursquare-type house with Classical Revival-style influences. It is two bays wide with a gable-roofed dormer containing a Palladian window over the left-hand bay. An open, full-width porch with a center stair is supported by cast stone lonic columns and it has a cast stone block railing. The door is on center, flanked by fixed picture windows topped by leaded glass transoms. Remaining windows are one-over-one with stone sills and lintels; the foundation is cast stone block, and the roof is slate. A one-story, modern addition extends from the rear.

#### 43. History and Significance

The property record provides a date of construction of 1913, which is consistent with architectural influences and construction materials (Huron County, 2020). The property is notable as an example of an early twentieth century vernacular Classical Revival-style residence that retains a high degree of integrity of location, design, workmanship, and materials. The use of cast stone for structural and decorative porch elements was widespread in north central Ohio during the first quarter of the twentieth century as the material gained popularity. Porches of this design were often added to existing home but in this instance, it was likely part of the original design based on the date of construction.

#### 44. Description of Environment and Outbuildings (See #52)

Adjacent to the house is a two-car, concrete block garage and northwest of the house is a wood-frame barn with vertical plank siding and a sliding door on the gable end. The triangular shaped parcel is bordered a line of trees on the north side. The surrounding land is predominantly occupied by agricultural fields and widely spaced single-family residences.

#### 42. Further Description of Important Interior and Exterior Features

This is a front-gable, brick, Gothic Revival church building that is now used as a single-family residence. It is set on a rectangular footprint with a two-story, square tower topped by a pyramidal roof on the southwest corner. All visible penetrations have pointed arch tops with stone drip molding. A single large window occupies the center of the façade under the gable, four windows run along each elevation, and there is a window on the southwest side of the tower. The entrance, consisting of paired wooden doors topped by a pointed arch transom, is set in the tower facing the road. On each wall of the tower on the second level is a pointed arch opening that has been blocked over with vinyl siding.

#### 43. History and Significance

The property record provides a date of construction of 1906 but based on architectural influences and historical records the date is circa 1870. It appears on an 1873 Atlas of Huron County Ohio labeled as a Lutheran Church (Lake, 1873). The building as a very good example of a Gothic Revival-style rural church that retains a high degree of integrity of location, setting, design and workmanship. The majority of materials appear to be original as well.

#### 44. Description of Environment and Outbuildings (See #52)

The church is set on the east side of State Route 4 within a small stand of mature trees. It is abutted on all sides by agricultural fields and the surrounding land is rural.

#### 42. Further Description of Important Interior and Exterior Features

This is a two-story, cross-gable, Queen Anne-style house. The nearly symmetrical façade consists of a projecting center bay flanked by open, shed-roofed porches. A gable-roofed dormer projects over the left-hand porch. The center bay has a picture window topped by a leaded-glass transom and the remaining windows are rectangular one-over-one, and all have splayed brick arch lintels. The porch eaves are underscored by spindle work frieze and quarter-round brackets supported by turned posts. Gables also have spindle work brackets.

#### 43. History and Significance

Architectural influences indicate a date of construction circa 1875. A house is present on the site on the 1873 Atlas of Huron County, Ohio (Lake, 1873). Also on the property is a barn that is an intact example of a late-nineteenth English-style barn that indicates the property was historically a farmstead. The property is notable as an example of a vernacular Queen Anne-style residence that retains a high degree of integrity of location, design, workmanship, and materials.

#### 44. Description of Environment and Outbuildings (See #52)

Also on the property are six outbuildings. Directly behind the house is a one-story, wood-frame garage. West of the house, facing the road is a wood-frame bank barn with vertical plank siding and a high drive accessing a sliding door on the broad side and a shed-roofed addition on the rear. Other structures are a steel carport, a wood-frame shed, a steel Quonset hut, a steel and plastic greenhouse, and a one-story garage. The farmstead is sited on a level, grassy lot with scattered mature trees. The property is abutted by agricultural fields and located in a rural area of light development.

#### 42. Further Description of Important Interior and Exterior Features

This is a two-story, front-gable, brick house with a two-story, side-gable wing extending to the east. A one-story, screened porch spans the principal block and wraps the corner to the wing where it meets a recessed screened porch. Above the porch on the principal block there is a door in the left-hand bay indicating a second story porch that is no longer extant. Windows appear to be six-over-six, undetermined material, with stone lintels and sills; a rose window is located in the gable. Deep eaves are underscored by single brackets.

#### 43. History and Significance

ne property record provides a construction date of 1853, which is plausible based on settlement patterns, historical mapping, and architec fluences. The massing and fenestration indicate Greek Revival style influences, while the brackets and screened porches were likely part of a 100 renovation. The house appears on the 1853 Atlas of Huron County, Ohio, consisting of 100 acres that straddled all corners of the intersectic odern-day County Route 547 and Town Line Road 32, under the ownership of "I. Banta". Acreage and ownership remained the same as of 1 oday the parcel totals approximately 12 acres and no longer serves an agricultural purpose. The property is notable as an example of a vernal sidence on a former farmstead that retains a high degree of integrity of location, design, workmanship, and materials. The house is a record chitectural influences spanning half a century.

#### 44. Description of Environment and Outbuildings (See #52)

Also on the property is a wood frame, gambrel roofed barn with vertical plank siding and sliding doors on the broad side and a wood-frame, gable-roofed barn, both on concrete block foundations. A third outbuilding is a concrete block garage; all outbuildings appear to date to the early to mid-nineteenth century.

#### 42. Further Description of Important Interior and Exterior Features

This is a two-story, three-bay, wood-frame house with a hipped roof. The entry is in the center bay, flanked by slender one-over-one, double-hung windows with two of the same aligned on the second story. The roof is flat in the center, indicating the former presence of a cupola. Massing and roof form are reminiscent of the Italianate-style, but brackets, window hoods, and other decorative elements that may have existed have been removed

#### 43. History and Significance

This is a repetitive property type that is representative of housing common to the Historic Resources Study Area for the Emerson Creek Wind Farm Historic Resources Report. This is a vernacular example that has been modified through the use of modern materials resulting in loss of character defining architectural elements. Examples in this category would have been constructed circa 1865-1885 and are located in rural settings that were historically associated with agriculture. Houses in this category tend to retain only their form and roof line.

#### 44. Description of Environment and Outbuildings (See #52)

The house, and two garages appearing to date to the late twentieth century, are set within a small stand of mature trees with agricultural fields beyond. The area is rural, consisting of widely spaced residences and farms.

#### 42. Further Description of Important Interior and Exterior Features

This is a two-story, wood-frame, Italianate-style house with a hipped roof. It is three bays with the entry in the left-hand bay fronted by a one-bay wide porch with arched brackets. Shallow, single brackets underscore the eaves of the main roof. Attached on the north side is a one-and-one-half-story, front-gable section with a full-width, shed roofed porch. Windows are a mix of wood two-over-two, wood one-over-one, and vinyl one-over-one. There are no outbuildings.

#### 43. History and Significance

The house appears on a map as early as 1859, on the property of Peter Ruffing, indicating a likely mid-nineteenth century date of construction for the gable-roofed section (Nunan, 1859). The section that is now the main house was possibly added between 1860 and 1870. The property is notable as an example of a vernacular interpretation of the Italianate style that retains a high degree of integrity of location, design, workmanship, and materials.

#### 44. Description of Environment and Outbuildings (See #52)

The property is located on the east side of Section Line Road 30 within a small stand of mature trees. The surrounding area is rural. Single family homes are located to the north and south and an agricultural field lies to the east.

#### 42. Further Description of Important Interior and Exterior Features

This is a two-story, front-gable, brick house with a one-and one-half-story, side-gable wing extending to the west. The design incorporates Greek Revival and Italianate influences. The principal block is three bays wide with the entry in the right-hand bay; the door is framed by side lights and a transom light. The wing is four bays wide and a porch spans the three bays nearest the principal block. The porch is supported by square posts with straight brackets meeting in the center between posts. Along the wing windows are vinyl one-over-one and vinyl casements. Remaining windows appear to be vinyl six-over-one, with stone lintels and sills. The roof is asphalt and is underscored by paired brackets lining the eaves.

#### 43. History and Significance

This is a repetitive property type that is representative of housing common to the Historic Resources Study Area for the Emerson Creek Wind Farm Historic Resources Report. Massing consisting of a two-story, front-gable principal block with a perpendicular wing rising one to two stories is extremely common. The majority of examples are wood frame; however, brick examples such as this, often with brackets or other detail work, reflect a more upscale variation. As is the case here, many have been compromised through the introduction of replacement materials. The property record provides a date of construction of 1826 (Huron, 2020). Circa 1840 is more likely based on architectural influences and historical mapping. A house is mapped at this location in the 1859 *Map of Huron County*, *Ohio* (Nunan, 1859).

#### 44. Description of Environment and Outbuildings (See #52)

Also on the property is a side-gable, wood-frame barn located north of the house and two smaller gable-roofed barns that appear to be wooden. The larger barn has vertical plank siding, a standing seam metal roof, and paired sliding doors on the broad side. Visibility of the two smaller buildings is obscured by trees and structures. The buildings are set within a small stand of mature trees bordered on all sides by agricultural fields. The surrounding area is rural, consisting of widely spaced residences and farms.

#### 42. Further Description of Important Interior and Exterior Features

This schoolhouse is representative of the design commonly found within the area surveyed. It is a one-story, brick, front-gable structure on a rectangular footprint. This example is unusual for its asymmetrical principal facade, with the entry on the eaves side instead of under the gable. The building has been altered by the replacement of windows and doors. It appears to be in use as a residence or office associated with the adjacent cemetery.

#### 43. History and Significance

This Historic Resources Survey for Emerson Creek Wind Farm identified seven schools that thematically connect as examples of late-ninete entury district schoolhouses. These seven former schools included four previously identified and three newly identified examples. The schools apportant for their association with the physical development of the district school model.

he common school system, establishing public education, was approved by the Ohio state legislature in 1825_and school districts were formed to rate requirements. One- and two-room schools were intended to be located in a grid pattern every two miles in each direction, ensuring that no ould need to walk more than two miles round-trip to attend school. By 1874 there were 162 schools throughout Seneca County. This was higher rescribed for a county that totals 553 square miles, likely accounted for by a growing population. School numbers were assigned in a zig-zag fas eginning at the northeast corner, moving west along the line of schools then south two miles to the next school and back to the east, and s /alentine, 1987). As a thematically unified group district schoolhouses represent a regionally significant building type, and retain a moderately egree of integrity of location, design, and feeling.

istrict School No. 1, located at 2670 Peru West Section Line Road, Peru Township, Huron County, is a one-story example with an ununfiguration; the only entrance is situated off-center on the eaves side elevation. The building has replacement windows and appears to have I onverted to a residence. This school first appears on the 1873 Atlas of Huron County, and is labeled as District School No. 1 in 1891 on the Atla uron County, Ohio (Lake 1873; Mesnard, 1891).

wo other schools were newly identified as part of this survey, including:

- District School No. 5 0 County Route 32, Thompson Township, Seneca County
  - Also identified as the "Thompson Center School" this unusual two-story example retains its original form and fenestration, thoug windows and doors are either missing or boarded over (Valentine, 1987). It first appears on a map in 1896, labeled as "School No (Rerick, 1896).
- District School No. 2 7472 Boundary Road, Cranberry Township, Crawford County
  - This is a typical, one-story example that has been altered by with the addition of a sliding barn door accessed by an earthen rathese changes appear to have been done with the intention of utilizing them for storage or agricultural purposes. It first appears map in 1873, labeled as "S.H. No 2" (Gould and Starr, 1873).

our schoolhouses included as part of this thematic group were previously identified in the OHI, including:

- District School No 8 0 South Town Road 81, Reed Township, Seneca County (SEN0127812)
- Reedtown School, District School No. 1 1700 SR 4, Reed Township, Seneca County (SEN0124212)
- Old Thompson Twp District 2 corner of TR 81 and CR 34, Thompson Township, Seneca County (SEN0112405)
- District School No. 5 10509 Pattern Tract, Oxford Township, Erie County Road (ERI0219306)

#### 44. Description of Environment and Outbuildings (See #52)

District schools tend to be set close to major roadways, within 50-75 feet. They likely would have had associated outbuildings such as wood-sheds and outhouses, but those are no longer extant at the examples identified. The schoolhouse at 2670 Peru West Section Line Road is sited on a small rise, adjacent to a cemetery in a rural setting.

#### 42. Further Description of Important Interior and Exterior Features

This is a two-story, three-bay, square, brick house with a hipped roof. The entry is in the center bay, framed by sidelights and a transom light. Windows appear to be wood six-over-six with stone sills and lintels. The roof is sheathed in metal standing seam and is underscored by brackets. The entire property is partially obscured by overgrown vegetation, making clear identification of materials difficult.

#### 43. History and Significance

The property record provides a date of construction of 1820 (Huron, 2020). Based on architectural influences the date may have been slightly later, circa 1840. Historical mapping shows the property as being owned by Dennison (Denason) Niver from at least 1859 to 1891. As of the earliest date the parcel included 250 acres plus a lot across the road to the north that later contained a blacksmith shop (Nunan, 1859; Lake, 1873; Mesnard, 1891). The property is notable as an example of a vernacular interpretation of the Greek Revival style that retains a high degree of integrity of location, design, workmanship, and materials.

#### 44. Description of Environment and Outbuildings (See #52)

West of the house is a side-gable, metal sided barn with a similarly framed barn attached perpendicular at the west end. The buildings are set behind a metal gate within an overgrown lot bordered by mature trees. The surrounding area is rural consisting of widely spaced residential development; agricultural fields lie to the north and to the south are overgrown fields and forest.

#### 42. Further Description of Important Interior and Exterior Features

This is a two-story, side-gable, wood frame house with a full-width porch. The house is five bays wide with a center entry; a one-and-one-half-story addition extends from the rear. The porch has a hipped-roof and is supported by cast stone columns and cast stone block piers and foundation. Railings are composed of brick. Windows appear to be wood, six-over-one, double-hung units, siding is wood shingles, and the roof is asphalt. The eaves are underscored by knee brackets and exposed rafter tails.

#### 43. History and Significance

Based on historical mapping a house was on this site as early as the late 1850s, but window configuration, siding material, and Craftsman details indicate a significant renovation circa 1915 (Lake, 1859). The property is notable as an example of a nineteenth-century rural farmstead grouping consisting of a house and outbuildings and for its association with the agricultural development of northern Ohio. The property appears abandoned and the buildings neglected. However, as a collection they retain a moderately high degree of integrity of location, design, and feeling.

#### 44. Description of Environment and Outbuildings (See #52)

North of the house are three agricultural outbuildings, a side-gable barn, a hipped-roof shed, and a one-story saltbox shed. The property lies on an open grassy lot in the crossroads hamlet of Havana. The area surounding Havana is rural, consisting predominantly of agricultural fields and widely spaced residences.

#### 42. Further Description of Important Interior and Exterior Features

This is a two-story, wood-frame house with a cross-gable roof. The house is a vernacular interpretation of the Queen Anne-style and includes turned porch posts joined by a spindle work frieze, scroll-cut vergeboards and gable brackets, and a polychromatic paint scheme. The center projecting mass contains a picture window on the first story capped by a shallow, decorative gable roof centered between two one-over-one, double-hung windows on the second floor. The entry is off an open porch in the interior corner of the left-hand side of the house. Windows appear to be wood one-over-one, siding is clapboard, and the roof is asphalt shingles.

#### 43. History and Significance

The house first appears on an 1893 Sanborn Fire Insurance Map with a footprint and porch configuration matching the current conditions (Sanborn, 1893). A construction date of circa 1890 is consistent with late-Victorian-era architectural influences. The property is very good example of a vernacular Queen Anne-style house that retains a very high degree of integrity of location, design, materials, and workmanship.

#### 44. Description of Environment and Outbuildings (See #52)

This house is set on a narrow lot in the City of Bellevue. It is within a line of homes appearing to date to the late nineteenth to early twentieth centuries. They also share similar front yard setbacks providing a cohesive neighborhood appearance.

#### 42. Further Description of Important Interior and Exterior Features

This is a one-and-one-half-story, side-gable, Flemish-bond brick house with a perpendicular one-story wing projecting from the rear. The wing has a recessed entry porch and a non-functional barn door on the northeast elevation. The principal block is three-bays wide with a center entry and sits on a field-stone foundation. The majority of windows are wood six-over-six, double-hung units with the exception of three three-light, knee-wall windows under the eave along the façade. All are topped by vertical brick lintels. The house lacks any ornamentation.

#### 43. History and Significance

The property record card states that the house sits on a 100-acre parcel (Sandusky, 2020). Based on architectural influences and historical mapper e house likely dates to circa 1860. It is present on an 1874 atlas of Sandusky County, though no acreage is listed. By 1898 the property bounds ar milar to the current lines and the parcel is identified as consisting of 125 acres owned by "R. Sparks" (Everts, Stewart and Co, 1874; Hopple, 1898) ne property is notable as an example of a vernacular farmhouse with a very high degree of integrity of location, materials, and design. In addition, it tains an expansive acreage that is still in agricultural use, lending to its integrity of setting.

#### 44. Description of Environment and Outbuildings (See #52)

The house is located on the south side of State Route 101 amid a stand of trees and lawn. The remainder of the parcel, which turns south, running along Wales Corner Road, is occupied by an agricultural field. Southeast of the house, behind a cluster of vegetation is a modern residence.

#### 42. Further Description of Important Interior and Exterior Features

This is a one-and-one-half-story raised Ranch style house built in the mid-twentieth century. It is roughly rectangular in plan, with a main side-gable volume to the south consisting of a single story atop a raised basement. This original portion of the house is connected to a gable-front, two-bay garage by a side-gable, single-story addition. Character-defining elements include the low-slung form, the cantilevered projection of the main floor over the raised basement, the entry door at grade, and a bay window.

#### 43. History and Significance

This is a repetitive property type that is representative of housing common to the Historic Resources Study Area for the Emerson Creek Wind Farm Historic Resources Report. During the twentieth century, large nineteenth century farms were divided into smaller parcels and there was an increase in the construction of single-family homes on smaller parcels that did not include agricultural land. Ranch style homes are common to the current building stock of north central Ohio. Most are vernacular examples that have been modified through the use of modern materials and loss of character defining architectural elements. Note that the OHI number listed here is associated with a previously identified resource that is no longer extant.

#### 44. Description of Environment and Outbuildings (See #52)

The house is located on a small parcel amid agricultural fields in a rural area consisting of widely spaced residences and farms.

#### 42. Further Description of Important Interior and Exterior Features

This is a two-and-one-half-story, Queen Anne-style residence with asymmetrical massing; a steep, cross-gabled roof; and an octagonal turret. A wraparound porch has a low, hipped roof supported on lonic columns atop a stone or concrete masonry unit balustrade. The siding appears to be vinyl and the roof is finished in asphalt shingle. A ball finial atop the turret roof appears to be sheet metal. The windows are generally one-over-one single- or double-hung sash, except for fanlights in the gable ends. The building has a single-story rear addition.

#### 43. History and Significance

The current property, just over two acres, was partitioned from a 189-acre agricultural lot after 1896, and possibly prior to or soon after the house's construction by 1915 (Rerick Brothers, 1896; USGS, 1915). The property retains its historic agricultural setting. It is notable as an example of a nineteenth-century rural farmstead grouping consisting of a house and outbuildings and for its association with the agricultural development of northern Ohio.

#### 44. Description of Environment and Outbuildings (See #52)

A three-bay, gable-roofed barn with wood siding and a metal roof is located to the southwest of the house, and a single-story shed with a gable roof is sited west of the barn.

42. Further Description of Important Interior and Exterior Features

irmounted by a copper finial in the shape of a cross.

Primary Author	Secondary Author(s)	Year	Title
Arena, Susan	Andrew, Roblee; Johnson, Grant; Heaton, Patrick	2020	Historic Resources Survey, Emerson Creek Wind Farm

aint Gaspar del Bufalo is a Roman Catholic church built in 1884 in the Victorian Gothic style. It is rectangular in plan, with a projecting tower a nuth and a projecting bay forming the apse at the north. The exterior is characterized by flat planes of brick in a running bond, punctuated scorative brick corbeling and patterned brick stringcourses, atop a rusticated stone foundation. Sills, copings, arch voussoirs, and other details a one. The building has a steeply pitched gable roof clad in asphalt shingle. The structure is three bays wide and seven bays deep, with each bay or ast and west facades defined by buttresses and containing a gothic-arched, stained-glass window with wood tracery. A square tower projects from enter of the principal (south) façade and contains the principal entrance within an arched portico beneath a large stained-glass window. An attresses define the corners of the tower, rising into flying buttresses where the square tower transitions to an octagonal belfry level. The care cets of the octagonal section feature louvered gothic-arched openings below oculus windows. The tower is topped with a slate-clad steeple

the west of the church and set back from the road is a two-story, brick parsonage with a cross-gabled and hipped asphalt roof and a full-width p th Queen Anne details. The house has one-over-one windows with stone sills and rests on a stone foundation. It is estimated to have been stween 1880 and 1900. A modern, single-story structure (presumably a parish hall) is located at the rear of the property, northeast of the churc rmer convent is located immediately to the east. A cemetery associated with the church is located further east and set back from the road.

#### 43. History and Significance

ne church was established by the Precious Blood Society, a Catholic order formed in 1815 by St. Gaspar del Bufalo (Woods, 1891; Missionaries of ecious Blood, 2020). Missionaries of the Precious Blood, led by Fr. Francis de Sales Brunner, arrived in central and western Ohio from Europe Draft Form - Not Review by OHPO SEN0130605 Page: 2

844 to serve the region's German-speaking Catholic community. A church was established on the site by 1848. In 1850, Brunner built a chapel earby site which would become the Sorrowful Mother Shrine (Sorrowful Mother Shrine, 2020). By the 1890s, the society owned parcels totaling 30 acres to the north and south of present-day County Route 46 in the Township of Thompson, Seneca County (Woods, 1891). St. Gaspar del B nurch, then known as St. Michael's, was built in 1884, replacing an earlier church structure built in 1848 (Warner, Beers & Co., 1886). The Mission stablished several churches in Ohio and Indiana, as well as Saint Joseph's College and Calumet College, both in Indiana (Missionaries of the Prelood, 2020). The church and parsonage are notable as an intact example of ecclesiastical architecture in rural Ohio, as well as for their associate the Precious Blood Society and with Ohio's German-American community.

#### 44. Description of Environment and Outbuildings (See #52)

The church is located within a small residential development around four-corners surrounded by farmland.

#### 42. Further Description of Important Interior and Exterior Features

This is a one-and-one-half-story vernacular brick residence with a gable-and-ell form (Inset 22). The roof is clad in metal and the foundation is of parged masonry, with a stone water table on the principal façade only. The gable-front portion, to the west, contains a centered entry door on the first floor flanked by one-over-one windows, with a pair of one-over-one windows on the upper half-story. The door is not in use and stairs leading to it have been removed. A small, single-light window is tucked under the eave of the half-story on the west façade. The single-story, side-gabled portion to the east contains two one-over-one windows and an entry door within a porch supported by slender Doric columns resting on a stone or concrete masonry unit base. The windowsills and lintels are likely of stone but appear to be painted. Brick chimneys rise from the roof ridge near the south and east gable ends.

#### 43. History and Significance

ne house was likely built prior to 1864, when it appears on a map as the residence of J. Westrick (Lake, 1864). The two-acre lot was partitioned from 5-acre parcel sometime after 1890 (Woods, 1891). Although the lot is reduced in size, the property retains its historic agricultural setting. The property notable as an example of a mid-nineteenth-century rural farmstead grouping consisting of a house and barn, and for its association with attlement and agricultural development of northern Ohio.

#### 44. Description of Environment and Outbuildings (See #52)

A three-bay barn with a metal roof is located northeast of the house. The buildings are sited in an open, grassy lot surrounded by agricultural fields. The area is rural, consisting of widely spaced residential development and large farms.

#### 42. Further Description of Important Interior and Exterior Features

This is a one-and-one-half-story, wood frame, gable-and-ell residence with an asphalt roof and vinyl siding. An exterior brick chimney interrupts the roof eave on the west façade. Windows are generally one-over-one and do not appear to be original. Other alterations include an enclosed entry porch and a substantial rear addition with an attached, two-bay garage.

#### 43. History and Significance

This is a repetitive property type that is representative of housing common to the Historic Resources Study Area for the Emerson Creek Wind Farm Historic Resources Report. The two-story, front gable principal block with a perpendicular wing rising one to two stories is most often seen executed in wood, as in this example, though numerous brick renditions can be found as well. The house may have been constructed as early as 1864, and most likely by 1874 (Lake, 1864; Stewart, 1874). Although still in agricultural use and retaining its historic 80-acre size, the house has been modified through the use of modern materials resulting in loss of character defining architectural elements. Any historic agricultural buildings are no longer extant.

#### 44. Description of Environment and Outbuildings (See #52)

Two metal pole barns dating to the 1970s and 80s are located north of the house. The buildings are clustered in an open grassy area with mature trees. Surrounding land is occupied by agricultural fields.

#### 42. Further Description of Important Interior and Exterior Features

This is a two-story wood frame double house in a vernacular interpretation of the Italianate style (Inset 23). It is square in plan with symmetrically arranged facades atop a stone foundation and with a low, hipped roof. The exterior walls are clad in clapboard and the roof is asphalt. A wide front porch supported on turned posts with brackets contains paired entry doors. With the exception of those at the basement level, windows are one-over-one, and may be original. As a vernacular interpretation of the Italianate style, floor heights are relatively low and, though it is not known whether the eaves were originally bracketed, the narrow fascia suggests they may have been unadorned. A flat portion at the peak of the hipped roof suggests a cupola may have been present.

#### 43. History and Significance

The house appears to have been built after 1864, when it appears on a map as the property of W. (William) Anway, and prior to 1874, when it appears on a map as the property of Phoebe J. Anway (Lake, 1864; Stewart, 1874). The property is still in agricultural use and retains its historic 80-acre size. The property is notable as an example of a vernacular Italianate farmhouse, a type and style of residence common to nineteenth-century rural Ohio and retaining a high degree of integrity of setting, materials, workmanship, and feeling.

#### 44 Description of Environment and Outbuildings (See #52)

A small barn with a metal roof, vertical board siding, and a sliding door is located to the northeast of the house, the house and barn are sited in an open grassy lawn, with a dense stand of trees to the north. The remainder of the parcel consists of agricultural fields. This is consistent with the rural nature of the area, which consists of widely spaced residences and farms.

#### 42. Further Description of Important Interior and Exterior Features

This is a one-and-one-half-story vernacular wood-frame residence with a gable-and-ell form (Inset 24). The exterior is clad in wood clapboard and the foundation is of cut stone. The slate roof features bands of decoratively shaped slates. The front-gable portion to the east is two bays wide, with symmetrically arranged windows on the south and east facades. The side-gable portion to the west features a two-bay-wide entry porch with Queen Anne details. Two doors lead inside from the porch. Windows are generally one-over-one. There are basement windows at the east and west, and a triple, casement window at the first floor of the west façade. There is a single-story extension at the rear of the house, which shares the same siding and roofing materials as the main volume.

#### 43. History and Significance

The house was likely constructed prior to 1864, when it appeared on a map as the farm and residence of Joseph Bogner (1836-1907), an Alsatian immigrant (Lake, 1864; Find A Grave, 2020). The barn appears to date from about the same time. The property retains its historic 80-acre size and is still in agricultural use. The property is notable as an intact example of a mid-nineteenth-century farmstead. The house is a very good example of a vernacular farmhouse, a type and style of residence common to nineteenth-century rural Ohio and retaining an unusually high degree of integrity of setting, materials, workmanship, and feeling.

#### 44. Description of Environment and Outbuildings (See #52)

A small shed with a metal roof and vertical wood siding is located to the rear of the house. To the west is a four-bay barn with a metal-clad gable and vertical wood board siding. Three pairs of sliding doors are located on the south façade, and another pair is located on the east. The house and atbuildings are located in an open grassy area at the southern end of the parcel. The remainder of the parcel is occupied by an agricultural field, retching north to East Township Road 124. This is consistent with the rural nature of the area, which consists of widely spaced residences and farr

#### 42. Further Description of Important Interior and Exterior Features

This is a large, two-story wood-frame house in the Queen Anne style. It is roughly L-shaped in plan, consisting of two main rectangular volumes with multiple crossed roof gables and an enclosed, full-width front porch. The exterior is clad in a replacement material at the first and second floors, and in wood shingle with octagon butts at the gable ends. Windows in the gable ends of the principal façade are recessed, with the shingle-clad wall surface curving inward to meet the jambs. The roof is clad in asphalt shingle, and projects atop modillions at the main eave. A brick chimney rises from the main roof ridge at the north; a second, exterior brick chimney pierces the roof eave at the rear (west) façade. The full-width porch on the principal façade appears to have been enclosed with brick piers and spandrels and three-over-one windows in the early twentieth century. The main entry to the porch features a door with divided lights and sidelights, while a second porch entrance has a similar door without sidelights. The complex roof of the porch features gables with sawn ornament in a scroll motif over each entrance, with an octagonal roof topped with a finial between them. The porch roof eaves contain modillions and dentil molding. Excepting those on the porch, windows are generally one-over-one. A fixed-sash window in one of the main roof gables features a diamond-shaped pane surrounded by smaller square panes.

#### 43. History and Significance

Based on historic imagery, wood clapboard siding was covered or replaced and nonoriginal shutters were added between 2008 and 2020 (Got 108). A rear addition consists of a single-story gable-roofed projection and a single-bay, gable-roofed garage. The property includes a carriage pross the road, which has clapboard siding and dentil molding below an overhanging, flared gable end featuring shingles with octagon butts. The groof clad in slate. The overhead door is not original. This description of the carriage house is based on 2008 imagery and may not reflect cupoditions (Google, 2008).

ne house appears to have been built prior to 1874, when it appears on a map as the residence and farm of Samuel Weaver (Stewart, 1874).

mple, rectangular massing of the two main volumes suggests an earlier structure with subsequent Queen Anne modifications through additions of alterations. The house is unusually large for its rural setting in northern Ohio. The property includes land on both sides of the road; however, it

een reduced to less than 1.5 acres from its historic size of more than 300 acres (one of the larger landholdings in the Township of Venice). roperty is notable for its association with the agricultural development of northern Ohio, as an intact example of a nineteenth-century farmh xpanded and altered over several generations of ownership by a prosperous farming family. Although no longer part of the same parcel or unde ame ownership, several historically significant agricultural buildings are still extant, and as a whole, the grouping retains a high degree of integraterials, setting, and feeling.

#### 44. Description of Environment and Outbuildings (See #52)

A grouping of historic barns, including a substantial barn featuring a cross-gable roof, was originally part of the property, but is no longer part of the same parcel as the house and carriage barn. The property is located in a rural setting consisiting of widely spaced residences and farms and is surrounded on all sides by agricultural fields.
