

In September I purchased two solar lights for my driveway. I have noticed on good days the lights will come on about an hour after sunset and remain on until around 3 am. Recently the days have been overcast. For 3 nights in a row, the lights have not operated at all. Essentially the lights have been useless on overcast days. Will this be the same with million dollar solar panels in Yellow Wood, Clinton County? Sounds like some cold nights are in store for residents dependent on solar.
