Columbus, Ohio 43215-3797

**Re: Case No. 20-417-EL-BGN -In the Matter of the Application of Grover Hill Wind, LLC for a Certificate of Environmental Compatibility and Public Need to Construct a Wind-Powered Electric Generation Facility in Paulding County, Ohio.**

**Supplemental Response to Seventh Data Request from Staff of the Ohio Power Siting Board**

Dear Ms. Troupe:

Attached please find Grover Hill Wind, LLC’s (“Applicant”) Supplemental Response to the Seventh Data Request from the staff of the Ohio Power Siting Board (“OPSB Staff”). The Applicant provided this response to OPSB Staff on January 7, 2022.

We are available, at your convenience, to answer any questions you may have.

Respectfully submitted,

*/s/ Christine M.T. Pirik*

## CERTIFICATE OF SERVICE

The Ohio Power Siting Board's e-filing system will electronically serve notice of the filing of this document on the parties referenced in the service list of the docket card who have electronically subscribed to these cases. In addition, the undersigned certifies that a copy of the foregoing document is also being served upon the persons below this 7<sup>th</sup> day of January, 2022.

**BEFORE**  
**THE OHIO POWER SITING BOARD**

In the Matter of the Application of Grover Hill Wind, )  
LLC for a Certificate of Environmental Compatibility )  
and Public Need to Construct a Wind-Powered ) Case No: 20-417-EL-BGN  
Electric Generation Facility in Paulding County, Ohio. )

**GROVER HILL WIND, LLC'S**  
**SUPPLEMENTAL RESPONSE TO THE SEVENTH DATA REQUEST**  
**FROM THE STAFF OF THE OHIO POWER SITING BOARD**

On May 3, 2021, as supplemented, Grover Hill Wind, LLC (“Applicant”) filed an application (“Application”) with the Ohio Power Siting Board (“OPSB”) proposing to construct a wind-powered electric generation facility in Paulding County, Ohio (“Project”).

On August 27, 2021, the Staff of the OPSB (“OPSB Staff”) provided the Applicant with OPSB Staff’s Seventh Data Request. Now comes the Applicant providing the following Supplemental Response to the Seventh Data Request from the OPSB Staff.

**Noise:** Attached please find the Operational Noise Limit Supplement prepared by Westwood dated January 7, 2022. This document supplements the Response to the Seventh Data Request from the OPSB Staff that was filed in the docket on September 14, 2021.

Respectfully submitted,

**Grover Hill Wind Farm**  
Operational Noise Limit Supplement to  
OPSB Data Request 7 Case No. 20-417-EL-BGN

Paulding County, OH  
January 7, 2022

Prepared By: **Westwood**      Prepared For: **Grover Hill Wind, LLC**

This document is meant to serve as a supplement to the September 13, 2021 Grover Hill Wind (“Grover Hill”) Farm Noise Impact Assessment (“Noise Report”) to update recommended operational noise limits.

## **Recommended Operational Noise Limits**

Westwood recommends the limits for Grover Hill be established in line with precedent set by similar wind projects approved in Ohio. The following describes noise limits for the Buckeye II project:

*“The facility shall be operated so that the facility noise contribution does not result in noise levels at the exterior of any currently existing nonparticipating sensitive receptor that exceed the project area ambient nighttime Leq of 39 dBA, plus five dBA. During daytime operations only, 7:00 a.m. to 10:00 p.m., the facility may operate at the greater of: (a) the project area ambient nighttime Leq, 39 dBA, plus five dBA; or (b) the validly measured ambient (Leq), plus five dBA, at the location of the sensitive receptor.”*

Thus, the nighttime noise limit should be determined by applying 5 dBA above the area nighttime ambient noise levels (Leq).

This noise level condition was also used for the Northwest Ohio Wind Farm (“NWOW”), which is adjacent to the proposed Grover Hill Project. An ambient noise study was completed for NWOW and found nighttime Leq averages ranging from 37 to 51 dBA, with an area wide average of 43 dBA. An operational noise limit of 48 dBA (43 dBA + 5 dBA) was established for the project.

An ambient study was also conducted for Grover Hill in July of 2021. As these two projects are adjacent and have similar acoustic environments, similar ambient results were found. Across six measurement sites, nighttime Leq averages ranged from 36-45 dBA. It was noted that the Grover Hill data had a stark difference between measurement sites within 250 feet of a roadway, and those further away. Table 1 illustrates the difference between the two groups of measurements.

**Table 1**  
**Ambient Nighttime Measurements and Area-Based Averages**

|                                  | Within 250 ft of roadways           |        |        | Beyond 250 ft of roadways           |        |        |
|----------------------------------|-------------------------------------|--------|--------|-------------------------------------|--------|--------|
|                                  | LT-1                                | LT-4   | LT-6   | LT-2                                | LT-3   | LT-5   |
| A-Weighted Nighttime Ambient Leq | 45 dBA                              | 39 dBA | 40 dBA | 36 dBA                              | 39 dBA | 37 dBA |
|                                  | Range: 39-45 dBA<br>Average: 42 dBA |        |        | Range: 36-39 dBA<br>Average: 37 dBA |        |        |

With this difference in mind, Westwood recommends applying two operational noise limits to residences in the project area: 47 dBA (42 dBA + 5) for homes within 250 feet of a roadway, and 42 dBA (37 dBA + 5) for homes beyond that distance. These limits better reflect the acoustic conditions of individual receptors, and both limits fall below those set for the adjacent project.

The Noise Report recommended nighttime limits of 44 (39+5) and 38 (33+5) dBA for homes within and beyond 250 feet of roadways, respectively. However, these limits were based on ANS-filtered ambient averages. ANS filtering consists of eliminating all octave bands above 1000 Hz. While it can be useful in some settings, in this case ANS filtering resulted in artificially low values that did not reflect the acoustic environment of the area and was not in line with the precedents set by Buckeye II and Northwest Ohio.

In addition, and due to the complexity of the Grover Hill site being affected by multiple operating wind projects, the Applicant requests that Grover Hill nighttime sound level limit to be set at the same level to its adjacent operating wind project NWOW. 48 dBA (43 + 5 dBA). This allowance is reasonable and will allow Grover Hill noise compliance level to account for higher ambient noise levels caused by existing operating turbines.

In summary, the applicant requests operational sound level limits as reported in the Table 2:

**Table 2**  
**Recommended and Requested**  
**Noise Limits**

|  | Nighttime Ambient Sound Level (dBA) | Sound Level Limit (Nighttime Ambient plus 5 dBA) | Requested Operational Sound Level Limit |
|--|-------------------------------------|--|---|
| Receptors within 250 feet of a roadway | 42 dBA                              | 47 dBA   | 48 dBA                                  |
| Receptors beyond 250 feet of a roadway | 37 dBA                              | 42 dBA   | 43 dBA                                  |

## Operational Noise Modeling and Mitigation

To determine if the proposed Grover Hill turbine array will operate in compliance with the recommended noise limits, Westwood analyzed the site specifics through a model built in WindPRO. The following assumptions were made to ensure a "worst case" scenario was analyzed to produce a model more conservative than realistic operational conditions.

- The initial model in the Noise Report assumed the turbines were operating at the loudest sound emission level at 89 meters hub heights.
- An additional uncertainty margin of 2 dBA was added to the noise emission levels.
- Noise contributions from the nearby Blue Creek and NWOW projects were also included in the analysis
- Since final turbine selection has not been identified for Grover Hill, the loudest turbine model being considered was used for this analysis.

Two noise models were then run, and the required noise reduced operation ("NRO") modes were calculated for both sets of operational noise limits. With the NRO modes all sensitive noise receptors have a modelled project noise level in compliance with the recommended noise limits. Note that this represents a worst-case modelled scenario, and another NRO analysis will be done after final turbine selection is decided. Levels will be verified at each receptor to ensure compliance with the stipulated noise level requirements. The following tables contain detailed results of the modelled sound level results and required NRO modes for the turbine layout.

**Table 3**  
**Grover Hill Turbine Layout and required NRO Reductions**
