

PK: Chipmunk Solar Project
Docket Case # 21-0460-EL-BGN

Public Utilities Commission of Ohio
DOCKETING DIVISION

3-9-22

Mar 11 2022

Ladies and gentlemen:

RECEIVED

Additional points I would like to make on my strong opposition of the possible solar project coming to my township are first of all I had no part of bringing Joe Biden to the Presidency but once elected I was willing to go along with his ideas of helping to preserve our planet. For whom I ask? Wealthy land owners who inherited all their land who do not live in or near our beautiful county? or like one neighbor who inherited his farm and has never worked a day in his life said to me at a recent solar meeting he needed the solar to go in because it was his retirement! As he rubbed his hands together and smiled. There are a few people with lots of land in favor of solar and many many more with "No solar on farmland" signs in their yards. Come and look! Some like my husband and myself who have worked very hard all our lives to own a very small farm here in America.

We are thankful for this land are just beginning to reap the rewards of our retired years and really getting to enjoy our lives and our grandchildren! We live

very close to Deercreek State Park which makes me want to make more points out. Last fall we took our horses over there for a day ride and rode right past a bald eagle perched in a tree looking down at us! We've also spotted one feeding on a deer carcass hit along the road. And what about the smaller creatures like the honeybee's so dependant on crops? I cannot see them gathering nectar from a solar panel. As my husband pointed out to you in an earlier letter we fear^a natural disaster to the solar panels could be astronomical.

There is a much better, more environmentally friendly plan besides this ahead I feel. We need to hold off on the destruction of the land. We hope you will consider all of the lives, not just human, affected by solar. Humanity is the "supreme being" and that gives us a rather large responsibility. We have to take into consideration all God's creatures great and small and come up with the best plan for all of us (and not just us!) Thanks for listening.

Sincerely,

Joann Redman
