

To Whom it May Concern,

I am writing to oppose the Solar Panel Industrial sites that are being proposed in Cass/Washington Twp.

My hope is that the Solar Panel projects being proposed in this Cass Twp as well as Washington Twp will be denied by you due to the nature of the zoning and agricultural status that has been present and upheld here for many years.

I am opposed to these projects and concerned for the preservation of farmland in this area and for future generations to have the opportunity to continue to farm this precious commodity. There are so many reasons NOT to install these environmentally hazardous panels in these locations. The destruction of farmland as well as the drainage issues and the effect on property value are also other valid issues.

The majority of people in these townships will not benefit from these projects based on your criteria for approval to "serve the public interest", "convenience" and "necessity". Only a small number of land owners and of course the Solar Facilities will benefit financially.

Thank you for your attention to this matter.

Respectfully,

Further Comments: Dust from plowing, planting, baling and pollen
will reduce the effectiveness of solar panels by 30%
according to an MIT Article. Where will the water
come from to clean them? Will wells go dry?

Additional communications can be emailed to the OPSB to this email address:

Musk's stake in Twitter good for free speech

On Monday, April 4 it was revealed through an SEC filing that Elon Musk of Tesla and SpaceX, the world's richest man, has purchased a 9.2% stake in Twitter. In the dark age of the Biden Administration, where Americans are being governed by bureaucrats with pie-in-the-sky ideas but no concrete plan for implementation, this is truly a momentous occasion.

From Afghanistan to lying about the efficacy of the COVID shots (CNN town-hall July 2021), Twitter banned dissenting opinion.

Take for example our current oil crisis. The Biden Administration wants the U.S. to fast-track going "green," but with China producing a third of all CO2 emissions from their world-leading and continuing coal-fired power plants, the rest of the world is fighting an uphill battle. If the U.S. would go totally green tomorrow it would not put a dent in world global emissions. Add India's reliance on coal, and we are buried.

Musk called on the Biden Administration to produce more domestic oil. Why would the world's preeminent builder of electric vehicles want to produce more oil to bring the price down? Because the bodies of every electric vehicle Tesla produces are made of fiberglass. Where does fiberglass come from? Oil.

The Biden Administration has shunned Musk from all CEO meetings regarding electric vehicle production in spite of Tesla employing 50,000 domestically and the company building 312,000 vehicles in the first quarter alone.

Yes, it is a good day when a proponent of free speech buys controlling interest in a social media firm that influenced an election by banning the Hunter Biden laptop story.
