**Case No. 20-1605-EL-BGN**

---

**TESTIMONY OF**

**T. Rae Neal**

**on behalf of**

**Allen Auglaize Coalition for Reasonable Energy**

**May 11, 2022**

**1. Please state your name.**

T. Rae Neal

**2. Please state your address.**

I live at 18240 Sellers Road, Lima, Ohio 45806.

**3. Please summarize your background and relationship to the Birch Solar project.**

I am a healthcare professional and a member of Ohio Clinicians for Climate Action (OCCA). I helped found the Allen Auglaize Coalition for Reasonable Energy (the “Coalition”) to educate myself and the community about solar energy, which led to advocating for the Birch Solar project (the “Project”). The Coalition is a formal grassroots coalition of individuals and landowners residing in Allen and Auglaize Counties that seeks to educate and engage with the community to inform and dispel misconceptions about solar energy and the Project.

**4. Please summarize your position on whether the Birch Solar project should be approved.**

Ohio’s reliance on fossil fuels has contributed to air pollution. EPA data show that over three million metric tons of greenhouse gases were emitted in Allen County in 2020 alone. Burning fossil fuels also greatly increases air pollution as demonstrated by the fact that since 1990, Allen County has often been classified by the USEPA as one of the top emitters of toxic air pollution among all Ohio’s counties, at times topping the list. Emissions of sulfur dioxide, nitrous oxides, particulates and other pollutants associated with burning of fossil fuels causes children to suffer

23 from asthma in record numbers, and the issue is not localized to Allen and Auglaize Counties.  
24 The Asthma and Allergy Foundation of America's 2019 report on the Top 100 Asthma Capitals  
25 ranked Akron, Cleveland, Dayton, Toledo, Columbus, and Cincinnati among the most challenged  
26 places to live for people with asthma as mentioned in the Ohio Clinicians for Climate Action  
27 letter to Governor Mike DeWine. The letter states that Ohio ranks "sixth in carbon dioxide  
28 emissions in the US" and associated air pollution contributes to, and exacerbates, asthma in  
29 "[o]ver 250,000 of Ohio's children." Exhibit A, at 1. The Ohio Clinicians for Climate Action  
30 call for action to advance "clean, renewable energy", "improving air quality and ensuring a  
31 healthy environment for [Ohio's] citizens." *Id.*

32  
33 The OPSB should approve the project based on these local and state health benefits.  
34

35 **5. Does this conclude your testimony?**

36 Yes.

**CERTIFICATE OF SERVICE**

In accordance with OAR 4906-2-02(D)(6), this document has been filed electronically and OPSB's e-filing system will electronically serve notice of the filing of this document on the parties referenced in the service list of the docket who have electronically subscribed to this case. Such notice constitutes service of this document.

# EXHIBIT A

April 13, 2021

The Honorable Mike DeWine, Governor  
The State of Ohio  
Riffe Center, 30th Floor,  
77 South High Street,  
Columbus, OH 43215

Dear Governor DeWine:

We, Ohio medical professionals, have responsibilities to care for our patients' immediate health concerns. We know that the welfare of our patients depends on having access not only to excellent healthcare, but also to healthy food, water, and air. For this to happen, our elected officials need to accelerate our state's transition to a renewable energy economy.

Ohio is among the top ten energy consumers in the United States. Currently, the majority of our power supply comes from over 20 coal and natural gas power plants. Due to these power plants, high emission industries, and our transportation infrastructure, Ohio ranks sixth in carbon dioxide emissions in the US. Air pollution-related to fossil fuel combustion, including sulfur dioxide, surface ozone, and fine particulate matter, causes a host of health harms to Ohioans, especially to our children.

The Asthma and Allergy Foundation of America's 2019 report on the Top 100 Asthma Capitals ranked Akron, Cleveland, Dayton, Toledo, Columbus, and Cincinnati among the most challenging places to live for people with asthma. Over 250,000 of Ohio's children have asthma, and African-American and Hispanic children are disproportionately impacted. Air pollution both causes and exacerbates asthma, and also contributes to poor birth outcomes such as premature birth and low birth weight, both of which are risk factors for infant mortality, a public health crisis in our state. Moreover, a study conducted by Cincinnati Children's Hospital Medical Center found that children exposed to traffic-related air pollution showed reductions in brain size and cerebrospinal fluid (the fluid cushioning the brain), leading to various developmental and physical delays. Even prenatal exposure to air pollution affects kids' learning, cognition, attention, and sleep. These are a few of many examples. The list of studies highlighting harmful health effects of our current energy sector is growing each day.

Even though the health harms of fossil fuel burning have been documented extensively, too little has been done at the state level to advance clean, renewable energy, and sustainable, equitable transportation. One of the most recent examples is the passing of House Bill 6, which rolled back renewable energy standards and energy efficiency programs, while subsidizing two coal-fired power plants. Fortunately, many Ohio cities—like Cleveland, Cincinnati, Columbus, and others—have stepped up to help fill the void of state leadership, and have used aggregation to commit to 100 percent renewable energy. These communities are serving as an example of what can be done to commit to improving air quality and ensuring a healthy environment for our citizens, and it is time for the state of Ohio to follow their lead.

The good news is, when compared with the rest of the country, Ohio is at the top of the list in potential health and economic benefits we realize from clean energy investment. We urge our elected state leaders to accelerate bold, decisive, equitable actions toward a clean energy economy to protect the health of all Ohioans.

As health professionals living and working in Ohio, we ask the state legislature and governor to immediately reinstate Ohio's renewable energy standards and energy efficiency programs, to invest in public transportation and improve electric vehicle infrastructure, and to set concrete goals to transition fossil fuel-based power plants to renewable energy by 2050. The health of Ohio's families—especially our children—depends on it.

Sincerely,
