

My Name is Gary K. Lundy. I was at the Findlay solar Farm meeting on April 27 2022 <sup>ELKS</sup> I did speak and let the meeting committee know that I was an electrician for my career. I do know that electric vibrates, and do know animals and varmints do not live around vibrations. So neighbors and I already have moles in are property.

Now you will push more moles, and ground hogs, possum, skunks, worms, and other out of the area into other property as in mine, the neighbors and other property around the solar Farm.

Now I do know batteries have corrosion and will get to the ground <sup>AS YEARS GO ON</sup> than in to creeks, Rivers, wells, that's our fresh water that we drink, bathe, brush our teeth with, clean, and laundry. Is this good for any human and our fresh water that is already down to 1% of the World.

Electric is noisy it hums and is loud

I Gary Lundy also know that solar panels have troughs that catch water from rain and snow and dew that drain it to creek that lead into rivers and in are district the portage river.

Now there are residential people at the meeting that have maps that was turned into the meeting consoles that have where the drainage tile is in the ground and your pictures do not have them drainage tile are and located. Why? what happen are they deleted?

As you should know all farmers have tile in the field that drain in to the creeks that lead to rivers and houses and residential areas from them Farmers fields are tied into the tiles, to drain off surface water and septic tank.

What I am getting to is that, you want to build this Solar Farm over this tiles? You will brake the tiles. Now you will ~~be~~ adding the water that is ~~draining~~ draining from the solar Farm into creeks which is

the same creeks that our surface water that is on our property that drains into, so with you adding more water from your solar panels, that means residential house, and fields that are going to grow food will have more surface water and take longer to drain off. As in floods, ruining basement, foundation and crops. Oh by the way there is a food shortage.

I would also like to bring up the solar farm meeting on 4-27-22 ELKS. The Findlay paper wrote an article about the meeting saying it was mostly positive. Well, if you listen to the tapes, recording of that Findlay solar meeting on 4-27-22 ELKS it was close to 80% negative.

Lithium is the necessary component of a ~~battery~~ battery and do you know ~~how~~ who has the biggest resource or how it is retracted from the ground or how the lithium is

disposed off And or recycled.

Please do your home work  
And get the Facts. And Ask  
yourself is this clean energy?

think of your Kids And Grand Kids  
And the Future of the land cuz  
we only have 1% of it left.

The

THANK YOU

GARY K Lundy

Gary K Lundy

P.S I Am the one that turned in picture  
of my property And my neighbors property  
flooded. It Floods At least 2 to 4 times  
A year And Drains 2 to 3 days After  
it stops raining.

Now we could get more water  
or stand longer. As in, Drain slower  
Cuz it Drains in <sup>the</sup> same creek to river  
~~that~~ that the Solar Farm will drain into
