People think solar panels protect the environment but they require 300+ times as much land as conventional energy sources and now the

energy sources and now the
Los Angeles Times has
discovered that they could
"contaminate groundwater
with toxic heavy metals such
as lead, selenium and
cadmium."

Hello, this is Michelle Lehman and would like to forward this article to show how negative the solar farms are for land.

Along with this article I would like to say that all these wind turbines and solar farms are LI part of the CCP trying to make their way into the United States to take us over. That's a better way than to take up our farm land to displace us, taking our livelihood and food source. Wake up please and see that this is nothing more than. Part of the Biden regime to take over the US!!!! Please don't help them out!!
